2. THIS PROPERTY IS SHOWN ON GWINNETT COUNTY TAX MAPS AS BEING PART OF THE 7TH LAND DISTRICT, LAND LOT 293 AND 294, PARCEL ID(S) 7270 044 AND CONTAINING 13.61 ACRES.
3. THIS PROPERTY IS ZONED M-1 (LIGHT INDUSTRIAL DISTRICT).
4. PROPOSED USE: R-100 (SINGLE-FAMILY RESIDENTIAL DISTRICT)
   TOTAL AREA = 9.76 ACRES (PORTION OF PARCEL 7270 044)
   DISTURBED AREA: 9.5± ACRES
5. THIS SITE DOES NOT CONTAIN STATE WATERS REQUIRING AN UNDISTURBED 25' STATE WATERS BUFFER.
6. THIS SITE DOES NOT CONTAIN AREAS, STREAMS, AND/OR BODIES OF WATER DEPICTED AS WETLANDS ON THE U.S. DEPARTMENT OF INTERIOR, FISH, AND WILDLIFE SERVICE.
7. THERE IS NO FLOODPLAIN ON THIS PROPERTY FROM A WATERCOURSE WITH A DRAINAGE AREA EXCEEDING 100 ACRES OR FLOODPLAIN PER FIRM PANEL NO. 13135C0015G, DATED 3-4-2013.
8. BOUNDARY INFORMATION BASED ON SURVEY PERFORMED BY BLUE LANDWORKS, LLC, DATED APRIL 2024.
9. TOPOGRAPHIC INFORMATION IS TAKEN FROM GWINNETT COUNTY GIS AND GROUND RUN SURVEY PERFORMED BY BLUE LANDWORKS, LLC DATED APRIL 2024. CONTOUR INTERVAL IS TWO FEET.
10. ALL TEMPORARY TRAFFIC CONTROL MUST BE IN ACCORDANCE WITH THE CURRENT EDITION OF THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.
11. EXISTING SITE CONDITIONS: VEGETATED VACANT LOT.
12. ADJACENT AREA: SINGLE-FAMILY RESIDENTIAL AND COMMERCIAL.
13. ALL CONSTRUCTION TO COMPLY WITH CITY OF BUFORD STANDARDS.
14. CONSTRUCTION DEBRIS WILL BE DISPOSED OF IN A REGULATED OFF-SITE LANDFILL.
15. NO CERTIFICATE OF OCCUPANCY WILL BE ISSUED UNTIL ALL SITE IMPROVEMENTS HAVE BEEN COMPLETED.
16. SIGNS, LOCATION, NUMBER, AND SIZE ARE NOT APPROVED UNDER THIS PERMIT. A SEPARATE PERMIT IS REQUIRED FOR EACH SIGN.
17. ALL CONSTRUCTION SHALL COMPLY WITH CITY OF BUFORD STANDARDS AND SPECIFICATIONS.
18. ANY UTILITY IMPROVEMENTS (WATER, SANITARY SEWER, NATURAL GAS AND/OR STORM DRAINAGE) TO BE DEDICATED TO THE CITY AND BECOME CITY RESPONSIBILITY MUST BE INSTALLED BY A CONTRACTOR ON THE CITY'S APPROVED CONTRACTOR LIST, OR OBTAIN APPROVAL BY THE CITY TO BE ADDED TO THE LIST PRIOR TO THE BEGINNING OF INSTALLATION.
19. ALL UTILITIES (WATER, SANITARY SEWER, NATURAL GAS, AND ELECTRIC) PROVIDED BY CITY OF BUFORD.

SITE DATA [Z-24-20]

PROPOSED ZONING USE = R-100
FRONT SETBACK(S) = 25'
SIDE SETBACK(S) = 10'
REAR SETBACK(S) = 30'
LOT AREA = 7,500 SF
TOTAL ACREAGE = 9.76 AC
DISTURBED ACREAGE = 9.5 AC
EXISTING IMPERVIOUS ACREAGE = 0.11 AC
PROPOSED IMPERVIOUS ACREAGE = 8.7 AC
BUILDING SQUARE FOOTAGE = 2,000 SF (SLAB)
2,800 SF (2-STORY)
MAX BUILDING HEIGHT = 35'

PARKING CALCULATIONS
2 MINIMUM PARKING SPACES PER DWELLING UNIT
EACH HOME SHALL HAVE A MINIMUM 2-CAR GARAGE PER Z-24-20 #4
25 DWELLINGS x 2-CAR GARAGE = 50 PARKING SPACES

CORNER SIGHT DISTANCE
I, the undersigned, hereby certify that the proposed entrance and all interior streets for the "BRICKHAVEN ROW" project are designed with adequate corner sight distance for each intersection. The regulated speed limit on Adams Road and Smokey Road at the proposed entrances is 25 miles per hour. The sight distance required at the proposed entrance is 250 feet to the left and 250 feet to the right. The corner sight distance provided from the proposed entrances is equal to or exceeds the 250 feet of sight distance in both directions. The regulated speed limit for interior streets is 25 miles per hour. The sight distance for all interior intersections meets or exceeds 250 feet in each direction. Sight distance is measured with the driver's eye height of 3.5 feet at a distance of 15 feet from the nearest through lane to the center of each travel lane with an object height of 3.5 feet.

GEORGIA REGISTERED No. 28657 PROFESSIONAL ENGINEER TAYLOR ANDERSON

#Z-24-20: BBC Investment Group, LLC requested rezoning for the property located on Adams Street, out of parcel 7-270-044, containing 9.77 +/- acres from M-1 to R-100. Mike Phelps spoke on behalf of the applicant and explained the request to the Board. He stated they are proposing a small residential subdivision consisting of 25 lots. The lots will be a minimum of 7500 square feet with 75 foot lot width. He stated he is trying to propose affordable homes. He asked for the ranch homes to be a minimum of 1800 square feet and the two-story homes to be a minimum of 2200 square feet. He also asked for the homes to be 60% brick or stone on the front elevation with a 42" water table on the sides and rear elevations. No one spoke against the request. Motion by Mr. Weeks, seconded by Mr. Burge to approve the request with the following conditions:

1. The applicant shall submit subdivision development plans in conformance to Development Regulations Article 10 Section 10.2 and follow plan and plat specification in Development Regulations Section 10.3 for final plat approval when appropriate in the development process.
2. Each lot adjacent to the existing stream and having stream buffers and impervious setbacks within the lots shall be required to provide a residential drainage plan (RDP) prior to the issuance of building permits in conformance to Development Regulation Sections 10.5.1 and 10.5.2.
3. The approval of the zoning application provides no variances to the Buford City Zoning or Development Regulations with concern to code, construction specifications or procedures. Any variance request shall proceed as required per Buford City Code filing the property variance application, demonstrating hardships and approved under a separate public hearing.
4. Minimum gross heated floor area for the proposed home(s) shall be a minimum of 2000 square feet for a ranch, 2800 square feet for a 2-story home, which shall exclude basement both finished and unfinished. The home shall have a minimum 2-car garage.
5. All residential homes shall be constructed with four (4) sides brick or stone with architectural accents not to exceed twenty percent (20%) on the front elevation and not to exceed twenty percent (20%) on the side and rear elevations. Accents shall include brick, stone, wood, glass, metal, stucco, shakes, and painted cement siding, as approved by the Planning Director.
6. Minimum lot size shall be 7500 square feet and 75 feet in width.
7. The front setback shall be a minimum of 25 feet or 50 feet on collector roads and the rear setback shall be a minimum of 30 feet. The side setback shall be a minimum of 10 feet.
8. The driveway shall be a minimum of 18 feet in width. The length of the driveway shall be 20 feet from the garage to the sidewalk so as not to block sidewalks.
9. Each lot shall have sodded front yards.
10. Each lot shall have two (2) ornamental trees planted in the front yard. The trees shall be a species approved by the City of Buford and shall be a minimum of 3" caliper.
11. In conformance with this ordinance, substandard street improvement plans shall be approved and installation of the curb and gutter and binder course prior to the issuance of any building permits. A mandatory homeowner's association (HOA) shall be provided and responsible for maintenance of all common grounds, individual homeowner's lots, and stormwater detention facilities. Rental of the residential townhouse units shall be restricted to ten percent (10%) of the total units. This zoning condition shall be placed in the Declaration of Covenants, Restrictions, and Easements as enforced by the HOA.
12. A 3-way stop shall be provided at the intersection of Heraeus Boulevard/Smokey Road and South Street and the newly proposed subdivision street.
13. Adams Street shall be improved per the City of Buford Development Regulations and as outlined in the Request for Proposal.

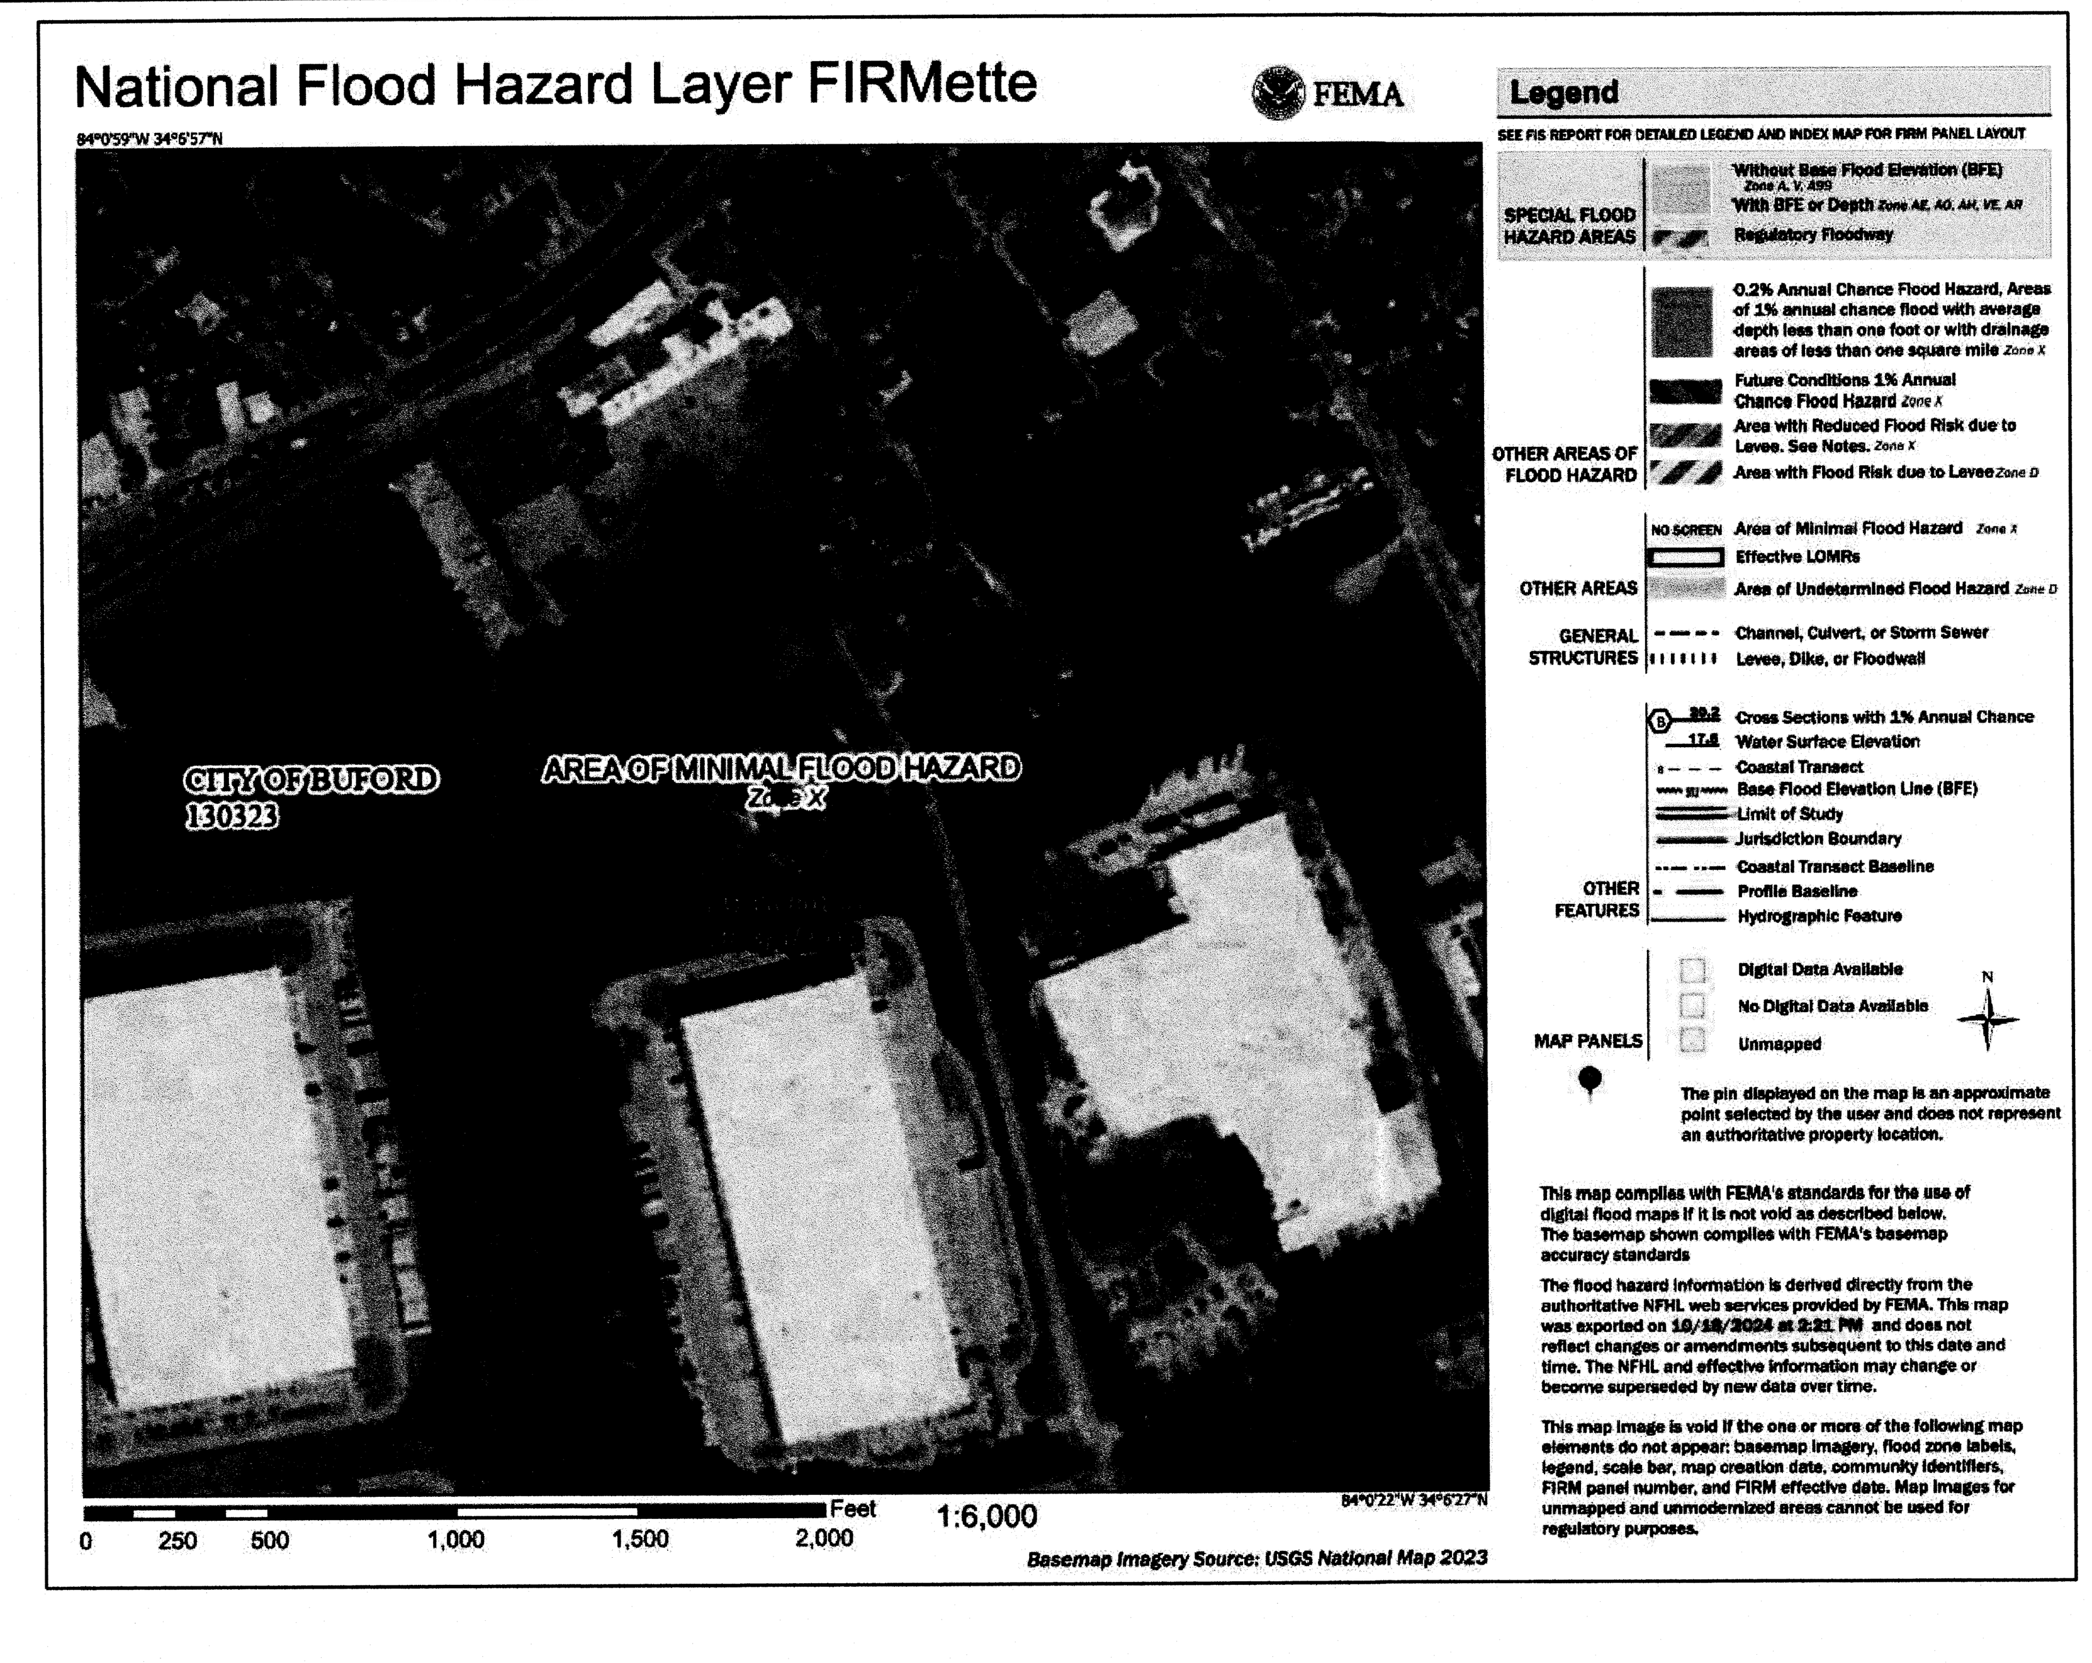
EXISTING UTILITIES ARE SHOWN FOR THE CONTRACTOR'S CONVENIENCE ONLY. THE ENGINEER ASSUMES NO RESPONSIBILITY FOR THE LOCATIONS SHOWN OR FOR THE UTILITIES NOT SHOWN. IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO VERIFY THE LOCATIONS OF ALL UTILITIES WITHIN THE LIMITS OF THE WORK. ALL DAMAGE MADE TO EXISTING UTILITIES BY THE CONTRACTOR SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR. THE CONTRACTOR IS ADVISED TO NOTIFY THE UTILITIES PROTECTION CENTER AT (800) 282-7411 PRIOR TO ANY EXCAVATION.

[redacted]

Contact 811 before you dig.

CALL 811 BEFORE ANY EXCAVATION WORK BEGINS OR ANY WORK BEGINS WITHIN TEN FT.(10') OF OVERHEAD POWER LINES OF 750 VOLTS OR MORE. SMART DIGGING MEANS CALLING 811 BEFORE EACH JOB. WHETHER YOU ARE A HOMEOWNER OR A PROFESSIONAL EXCAVATOR, ONE CALL TO 811 GETS YOUR UNDERGROUND UTILITY LINES MARKED FOR FREE.



INSTRUCTIONS TO CONTRACTORS:

GENERAL PROVISIONS
1. ALL WORK SHALL COMPLY WITH APPLICABLE STATE, FEDERAL AND LOCAL CODES AND ALL NECESSARY LICENSES AND PERMITS SHALL BE OBTAINED BY THE CONTRACTOR AT HIS EXPENSE UNLESS PREVIOUSLY OBTAINED BY OWNER.
2. ALL WORK SHALL BE PERFORMED IN A FINISHED AND WORKMAN LIKE MANNER TO THE ENTIRE SATISFACTION OF THE OWNER, AND IN ACCORDANCE WITH THE BEST RECOGNIZED TRADE PRACTICES. THE CONTRACTOR SHALL WARRANTY ALL WORK TO THE OWNER FOR A MINIMUM PERIOD OF 18 MONTHS FOLLOWING COMPLETION OF CONSTRUCTION.
3. DEVIATIONS FROM THESE PLANS WITHOUT THE PRIOR CONSENT OF THE OWNER OR HIS REPRESENTATIVES MAY BE CAUSE FOR THE WORK TO BE UNACCEPTABLE.
4. THE DRAWINGS AND SPECIFICATIONS ARE INTENDED TO COVER A COMPLETE PROJECT READY FOR USE, AND ALL ITEMS NECESSARY FOR A COMPLETE AND WORKABLE JOB SHALL BE FURNISHED AND INSTALLED.
5. ALL MATERIALS SHALL BE NEW, UNLESS USED OR SALVAGED MATERIALS ARE AUTHORIZED BY THE OWNER AND APPROPRIATE AUTHORITIES.
6. THE CONTRACTOR SHALL FURNISH AND MAINTAIN ALL NECESSARY BARRICADES AROUND THE WORK AND SHALL PROVIDE PROTECTION AGAINST WATER DAMAGE AND SOIL EROSION.
7. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO DETERMINE THE LOCATION OF ALL EXISTING UNDERGROUND UTILITIES AND TO TAKE WHATEVER STEPS NECESSARY TO PROVIDE FOR THEIR PROTECTION. THE ENGINEER HAS DILIGENTLY ATTEMPTED TO LOCATE AND INDICATE ALL EXISTING FACILITIES ON THESE PLANS, HOWEVER, THIS INFORMATION IS SHOWN FOR THE CONTRACTOR'S CONVENIENCE ONLY AND IS NOT GUARANTEED. THE CONTRACTOR IS TO CONTACT THE UTILITY COMPANIES FOR EXACT LOCATION OF THEIR UTILITIES PRIOR TO STARTING CONSTRUCTION.
8. CONTRACTOR SHALL COORDINATE LOCATION AND INSTALLATION OF ALL UNDERGROUND UTILITIES AND APPURTENANCES TO MINIMIZE DISTURBING CURBING, PAVING, AND COMPACTED SUBGRADE. ALL UNDERGROUND UTILITIES, INCLUDING THOSE INSTALLED BY OTHERS (ELECTRICAL CONDUIT, GAS, TELEPHONE, AND ANY OTHER MISCELLANEOUS) SHALL BE IN-PLACE PRIOR TO THE PLACEMENT OF BASE COURSE MATERIAL IF POSSIBLE.
9. IF THE CONTRACTOR, IN THE COURSE OF WORK, FINDS ANY DISCREPANCY BETWEEN THE PLANS AND THE PHYSICAL CONDITIONS OF THE LOCALITY, OR ANY ERRORS OR OMISSIONS IN THE PLANS OR THE LAYOUT AS GIVEN BY THE ENGINEER, IT SHALL BE HIS DUTY TO IMMEDIATELY INFORM THE ENGINEER, IN WRITING, AND ENGINEER WILL PROMPTLY VERIFY THE SAME. ANY WORK DONE AFTER SUCH DISCOVERY, UNTIL AUTHORIZED, WILL BE AT THE CONTRACTOR'S RISK.
10. CONTRACTOR SHALL PROVIDE THE ENGINEER WITH ONE (1) RED-LINE COPY OF AN "AS-BUILT" PLAN OF ALL UNDERGROUND UTILITIES WITHIN PUBLIC EASEMENT OR RIGHT-OF-WAY SHOWING THE LOCATION OF EACH WITH ALL DIMENSIONS SHOWN NECESSARY TO ACCURATELY LOCATE EACH UNDERGROUND UTILITY, FOR USE BY THE ENGINEER IN PREPARING FORMAL RECORD DRAWINGS FOR GWINNETT COUNTY APPROVAL.
11. SIGNS (EXCEPT HANDICAPPED PARKING SIGNS), LOCATION, NUMBER, AND SIZE ARE NOT APPROVED UNDER THIS DEVELOPMENT PERMIT. A SEPARATE PERMIT IS REQUIRED.
12. "SIDEWALKS SHALL BE CONCRETE, MINIMUM OF 5 FT. WIDE AND INSTALLED ON COMPACTED SOIL. CONCRETE SHALL BE CLASS "A"(GDOT) AND HAVE A STRENGTH OF 3,000 PSI AT 28 DAYS. THE AREA BETWEEN THE CURB AND SIDEWALK SHALL BE SODDED".
13. ALL WATER MAINS, CONNECTIONS AND OTHER APPURTENANCES ARE DESIGNED AND SHALL BE INSTALLED IN ACCORDANCE WITH THE CITY'S DEVELOPMENT REGULATIONS AND WATER AND SEWER STANDARD SPECIFICATIONS

GEOTECHNICAL
1. SOILS TESTING AND ON-SITE INSPECTION MAY BE PERFORMED BY AN INDEPENDENT GEOTECHNICAL ENGINEER SELECTED AND PAID BY THE OWNER. IN THE EVENT OF CONFLICT BETWEEN INSTRUCTIONS BY THE ENGINEER AND RECOMMENDATIONS PROVIDED BY THE OWNER'S GEOTECHNICAL ENGINEER, THE CONTRACTOR WILL ADHERE TO THE MOST STRINGENT.
2. CONTRACTOR SHALL PROVIDE ANY EXCAVATION AND MATERIAL SAMPLES NECESSARY TO CONDUCT REQUIRED SOIL TESTS. ALL ARRANGEMENTS AND SCHEDULING FOR TESTING SHALL BE THE CONTRACTOR'S RESPONSIBILITY.
3. GEOTECHNICAL ENGINEER SHALL PROVIDE COPIES OF TEST REPORTS TO THE CONTRACTOR, THE OWNER AND THE OWNER'S REPRESENTATIVE AND SHALL NOTIFY THE OWNER, HIS REPRESENTATIVE AND THE CONTRACTOR PROMPTLY SHOULD WORK PERFORMED BY THE CONTRACTOR FAIL TO MEET THESE SPECIFICATIONS.
4. COMPACT SOIL TO NOT LESS THAN THE FOLLOWING PERCENTAGES OF MAXIMUM DRY DENSITY ACCORDING TO ASTM D 1557:
   - UNDER STRUCTURES, BUILDING SLABS, STEPS, AND PAVEMENTS, COMPACT THE TOP 12 INCHES BELOW SUBGRADE AND EACH LAYER OF BACKFILL OR FILL MATERIAL AT 95 PERCENT DRY DENSITY.
   - UNDER WALKWAYS, COMPACT THE TOP 6 INCHES BELOW THE SUBGRADE AND EACH LAYER OF BACKFILL OR FILL MATERIAL AT 95 PERCENT MAXIMUM DRY DENSITY.
   - UNDER LAWN OR UNPAVED AREAS, COMPACT THE TOP 6 INCHES BELOW SUBGRADE AND EACH LAYER OF BACKFILL OR FILL MATERIAL AT 90 PERCENT MAXIMUM DENSITY.

EARTHWORK/GRADING
1. EARTHWORK AND GRADING SHALL BE PERFORMED IN ACCORDANCE WITH THE GEOTECHNICAL ENGINEER'S SPECIFICATIONS AND RECOMMENDATIONS, OR WITH SECTIONS 201-221 OF GA DOT'S STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION IF NOT COVERED BY THE GEOTECHNICAL ENGINEER'S SPECIFICATIONS, EXCEPT AS OTHERWISE NOTED.
2. MAXIMUM SLOPE OF FILL EMBANKMENT SHALL BE 2 FEET HORIZONTAL TO 1 FOOT VERTICAL UNLESS OTHERWISE SHOWN.
3. SEE NOTE 4 UNDER "PAVING AND CURBS".
4. SLOPE GRADES TO DIRECT WATER AWAY FROM BUILDINGS AND TO PREVENT PONDING.
5. EXCESS EARTH CUT MATERIALS, IF ANY, SHALL BE PLACED AT A LOCATION ON OR NEAR THE SITE AS DESIGNATED BY THE OWNER.

STORM DRAINAGE
1. ALL STORM DRAINAGE PIPE SHALL BE LAID ON SMOOTH, CONTINUOUS GRADES WITH NO VISIBLE BENDS AT THE JOINTS. ALL TRENCHING, PIPE LAYING AND BACKFILLING SHALL BE IN ACCORDANCE WITH FEDERAL OSHA REGULATIONS AND WITH CITY OF SUWANEE DEVELOPMENT REGULATIONS.
2. CONSTRUCTION OF STORM DRAINAGE STRUCTURES SHALL BE IN ACCORDANCE WITH THE DETAILS INCLUDED IN THE CONSTRUCTION DRAWINGS AND RELATED GEORGIA D.O.T. AND GWINNETT COUNTY SPECIFICATIONS.
3. THE DESIGN PROFESSIONAL CERTIFIES THAT THE STORMWATER MANAGEMENT SYSTEM FOR THIS PROJECT WAS PREPARED IN ACCORDANCE WITH THE CITY OF BUFORD DEVELOPMENT REGULATIONS AND THE GWINNETT COUNTY STORMWATER MANAGEMENT MANUAL.

SANITARY SEWER
1. ALL SANITARY SEWER PIPE SHALL BE LAID ON SMOOTH, CONTINUOUS GRADES WITH NO VISIBLE BENDS AT THE JOINTS. ALL TRENCHING, PIPE LAYING AND BACKFILLING SHALL BE IN ACCORDANCE WITH FEDERAL OSHA REGULATION AND WITH THE APPLICABLE SECTIONS OF THE GWINNETT COUNTY SANITARY SEWER STANDARDS.
2. THE MINIMUM HORIZONTAL DISTANCE BETWEEN PUBLIC WATER AND SEWER LINES IS TEN FEET. THE MINIMUM VERTICAL CLEARANCE SHALL BE EIGHTEEN INCHES.
3. ALL SANITARY SEWER LATERALS SHALL BE PLUGGED AND MARKERS INSTALLED SO THAT THEY CAN BE EASILY FOUND AFTER BACKFILLING.
4. SEWER SERVICE LATERALS SHALL BE PERMANENTLY MARKED ON THE CURB.
5. ALL TIE-INS TO EXISTING MANHOLES SHALL BE CORED. ALL MANHOLES REQUIRE "KOR-N-SEAL" OR EQUAL RUBBER BOOTS.
6. CONTRACTOR SHALL SET THE SANITARY SEWER MANHOLE LIDS AT FINISHED GRADE.
7. ALL SANITARY SEWER SYSTEMS, ARE DESIGNED AND SHALL BE INSTALLED IN ACCORDANCE WITH THE CITY'S DEVELOPMENT REGULATIONS AND WATER AND SEWER STANDARD SPECIFICATIONS.

PAVING AND CURBS
1. BASE COURSE MATERIALS, EQUIPMENT, METHODS OF CONSTRUCTION AND WORKMANSHIP SHALL CONFORM TO "DEPARTMENT OF TRANSPORTATION, STATE OF GEORGIA, STANDARD SPECIFICATIONS", MOST RECENT EDITION, SECTION 300 AND OTHER SECTIONS REFERRED TO THEREIN.
2. ASPHALTIC CONCRETE SURFACE COURSE AND ASPHALT PRIME MATERIALS, EQUIPMENT, METHODS OF CONSTRUCTION AND WORKMANSHIP SHALL CONFORM TO "DEPARTMENT OF TRANSPORTATION, STATE OF GEORGIA, STANDARD SPECIFICATIONS", MOST RECENT EDITION, SECTION 400, 412, 413, AND OTHER SECTIONS REFERRED TO THEREIN.
3. CONCRETE CURBS SHALL BE CONSTRUCTED IN ACCORDANCE WITH DETAILS SHOWN ON THE PLANS. MATERIALS, EQUIPMENT, METHODS OF CONSTRUCTION AND WORKMANSHIP SHALL CONFORM TO "DEPARTMENT OF TRANSPORTATION, STATE OF GEORGIA, STANDARD SPECIFICATIONS", MOST RECENT EDITION, SECTION 441 AND OTHER SECTIONS REFERRED TO THEREIN.
4. THE CONTRACTOR IS RESPONSIBLE FOR THE BACKFILLING OF CURB.
5. ALL CONCRETE SHALL BE 3,000 PSI AT 28 DAYS, WITH A MAXIMUM SLUMP OF 2", UNLESS NOTED OTHERWISE.
6. ALL EXPOSED CONCRETE TO HAVE A FINE HAIR-BROOMED FINISH.
7. CONCRETE CURBING SHALL BE CLASS "A" AND HAVE A MINIMUM STRENGTH OF 3,000 PSI AT 28 DAYS.
8. ALL CURB AND GUTTER SHALL HAVE AT MINIMUM 3"GAB INSTALLED UNDER CURB AND GUTTER PER ARTICLE 6.11.6 OF THE DEVELOPMENT REGULATIONS.

EROSION AND SEDIMENT CONTROL
1. SEE "ESPCP NOTES & DETAILS" SHEETS FOR EROSION AND SEDIMENT CONTROL NOTES.
2. CONSTRUCTION EXIT PADS SHALL BE INSTALLED BY THE CONTRACTOR AT EACH CONSTRUCTION ACCESS POINT.
3. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED AT ALL TIMES. ADDITIONAL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED IF DEEMED NECESSARY BY ON-SITE INSPECTION.
4. PROVISIONS TO PREVENT EROSION OF THE SOIL FROM THE SITE SHALL CONFORM TO THE REQUIREMENTS OF THE "EROSION AND SEDIMENTATION ACT OF 1975" AS SHOWN HEREON AND STIPULATED IN THE "MANUAL FOR EROSION AND SEDIMENT CONTROL IN GEORGIA" BY THE STATE SOIL AND WATER CONSERVATION COMMITTEE AND SHALL BE FOLLOWED AND INSTALLED IN A MATTER SO AS TO MINIMIZE EROSION OF THE DISTURBED AREAS AND PREVENT SEDIMENT FROM LEAVING THE SITE.
5. THE CONTRACTOR WILL BE REQUIRED TO INCORPORATE ALL TEMPORARY AND PERMANENT EROSION CONTROL MEASURES INTO THE PROJECT AT THE EARLIEST PRACTICABLE TIME DURING CONSTRUCTION. THE EROSION CONTROL MEASURES DETAILED HEREON SHALL BE CONTINUED UNTIL THE GRASS ON PLANTED SLOPES IS SUFFICIENTLY ESTABLISHED TO BE AN EFFECTIVE EROSION DETERRENT. THE SEDIMENT REMOVED FROM THE CONTROL STRUCTURES SHALL BE EVENLY DISTRIBUTED OUTSIDE CONSTRUCTION LIMITS. DISPOSED SEDIMENT SHALL BE PERMANENTLY GRASSED.
6. TEMPORARY AND PERMANENT VEGETATIVE COVER SHALL BE INSTALLED IN ACCORDANCE WITH THE REQUIREMENTS OF CHAPTER 11, SECTIONS 2-11 AND 2-12 OF THE "MANUAL FOR EROSION AND SEDIMENT CONTROL IN GEORGIA".

GWINNETT COUNTY FIRE NOTES
1. DURING CONSTRUCTION AND FOR PERMANENT ACCESS, ROADWAYS CONSTRUCTED OF AN ALL WEATHER SURFACE CAPABLE OF SUPPORTING 75,000 POUNDS GROSS WEIGHT SHALL BE PROVIDED PER INTERNATIONAL FIRE CODE, CHAPTER 5, SECTION 503.2.3, 2018 EDITON.
2. PLACEMENT OF FIRE HYDRANTS SHALL BE A MINIMUM OF 3 FT. AND A MAXIMUM OF 15 FT. FROM THE BACK OF THE CURB OR ROAD EDGE WITH THE LARGE FIRE DEPARTMENT CONNECTION FACING THE NEAREST FIRE DEPARTMENT ACCESS POINT AND SET A MINIMUM OF 18" AND A MAXIMUM OF 36" ABOVE FINISHED GRADE TO THE CENTER OF THE LARGE FIRE DEPARTMENT CONNECTION. AUTHORITY HAVING JURISDICTION.
3. FIRE HYDRANTS AND WATER MAINS ARE TO BE INSTALLED, FLUSHED AND UNDER PRESSURE BEFORE ANY COMBUSTIBLE CONSTRUCTION IS STARTED. GWINNETT COUNTY ORDINANCE FOR FIRE PROTECTION AND LIFE SAFETY, SECTION 46-38(A)
4. GROUND & FLOOR SURFACES ALONG ACCESSIBLE ROUTES AND WALKS, RAMPS, STAIRS, AND CURB RAMPS, SHALL BE STABLE, FIRM, SLIP-RESISTANT, AND SHALL COMPLY WITH 2010 ADA STANDARD FOR ACCESSIBLE DESIGN.

25 DWELLINGS x 2-CAR GARAGE = 50 PARKING SPACES

STREET LIGHTING:

POLE SHALL BE BLACK IN COLOR, 30-FEET IN HEIGHT, ROUND TAPERED ALUMINUM, AND BASE MOUNTED. TRUSS ARM SHALL BE BLACK IN COLOR, AND 10 TO 15 FEET IN LENGTH, AS DETERMINED BY THE ROADWAY WIDTH. FIXTURE SHALL BE A 400 WATT HIGH PRESSURE SODIUM COBRA HEAD FIXTURE. STREET LIGHTS SHALL BE SPACED 200-FEET LINEARLY ALONG ROADWAY.

Hydrant Flow Test Report

Building Site: Adams Street / Smokey Road

Date: 12-20-24

Time: 09:00 am

Taken by: G. Massie, C. Quinn

Location of test hydrant: Corner of Elliott Street and South Street

Static pressure: 50 psi

Residual pressure: 42 psi

Location of flow hydrant: Corner of Adams Street and Smokey Road

Pitot: 30 psi

Approximate flow at 20 psi residual (GPM): 1755

Bryan B. Kerlin, City Manager • Kim C. Wolfe, City Clerk • Lamar Sudderth, Administrative Assistant
Phillip Beard, Chairman Commissioners • L. Chris Burge, Vice Chairman Commissioners • Bradley W. Weeks, Commissioner

ALL SANITARY SEWER SYSTEMS, ARE DESIGNED AND SHALL BE INSTALLED IN ACCORDANCE WITH THE CITY'S DEVELOPMENT REGULATIONS AND WATER AND SEWER STANDARD SPECIFICATIONS.
ALL WATER MAINS, CONNECTIONS AND OTHER APPURTENANCES ARE DESIGNED AND SHALL BE INSTALLED IN ACCORDANCE WITH THE CITY'S DEVELOPMENT REGULATIONS AND WATER AND SEWER STANDARD SPECIFICATIONS

EMBANKMENTS SHALL BE PLACED IN UNIFORM LAYERS
NOT TO EXCEED A COMPACTED THICKNESS OF SIX (6) INCHES PER LAYER AND SHALL BE COMPACTED TO A DENSITY OF NINETY-FIVE (95) PERCENT OF THE MAXIMUM LABORATORY DRY WEIGHT PER CUBIC FOOT AS DETERMINED BY AASHTO METHOD T-99 IN ALL AREAS WHERE STRUCTURES, PARKING LOTS AND DRIVES, STREETS, AND UTILITIES ARE TO BE PLACED. ALL OTHER EMBANKMENTS ARE TO BE COMPACTED TO AT LEAST EIGHTY-FIVE (85) PERCENT.

OUTLET CONTROL STRUCTURE DETAIL

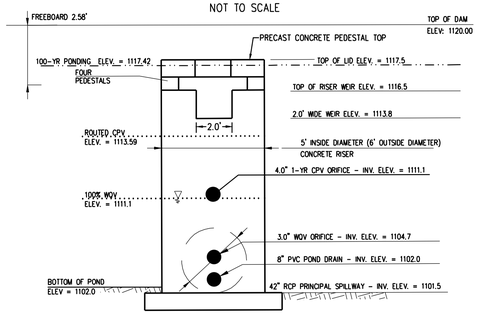
N.T.S.

NOTES:

1.) REFER TO ORIFICE END-CAP DETAIL ON THIS SHEET.
2.) SEE TABLE BELOW FOR WEIR AND ORIFICE SIZES & ELEVATIONS.
3.) PERFORATED HALF-ROUND CAN BE MOVED TO OCS IF GRADES ALLOW.
4.) HALF-ROUND TO BE ALUMINIZED TYPE 2 STEEL PIPE.

OUTLET STRUCTURE D-2 DETAIL

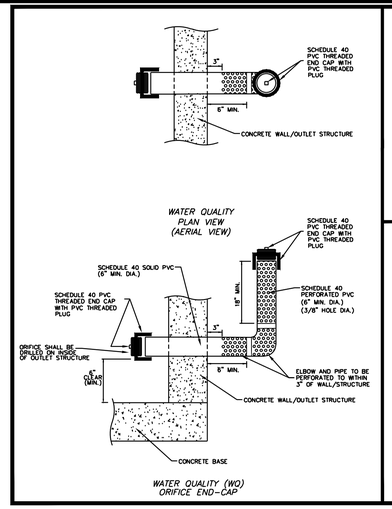
NOT TO SCALE



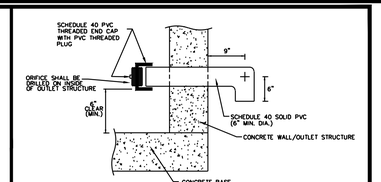
NOTE:

WQV (WATER QUALITY VOLUME) ORIFICE:
8" PVC PIPE TO BE INSTALLED IN OUTLET STRUCTURE AT INVERT ELEV.
UPSTREAM END OF PIPE TO BE FITTED AS SHOWN ON ORIFICE END-CAP DETAIL.
DOWNSTREAM END OF PIPE TO EXTEND 6" INTO OUTLET STRUCTURE.
DOWNSTREAM END OF PIPE TO BE FITTED WITH THREADED END CAP
WITH 3.0" DIA. ORIFICE LOCATED AT INVERT ELEV. SHOWN ABOVE
THREADED END CAP TO BE REMOVED WHEN NECESSARY TO FACILITATE MAINTENANCE ACTIVITIES.

1-YR CPV (CHANNEL PROTECTION VOLUME) ORIFICE:
8" PVC PIPE TO BE INSTALLED IN OUTLET STRUCTURE AT INVERT ELEV.
UPSTREAM END OF PIPE TO BE FITTED AS SHOWN ON ORIFICE END-CAP DETAIL.
DOWNSTREAM END OF PIPE TO EXTEND 6" INTO OUTLET STRUCTURE.
WITH 4.0" DIA. ORIFICE LOCATED AT INVERT ELEV. SHOWN ABOVE
THREADED END CAP TO BE REMOVED WHEN NECESSARY TO FACILITATE MAINTENANCE ACTIVITIES.



WATER QUALITY (WQ) ORIFICE END-CAP



CHANNEL PROTECTION (CP) ORIFICE END-CAP

NOTES (TO APPLY TO ALL):

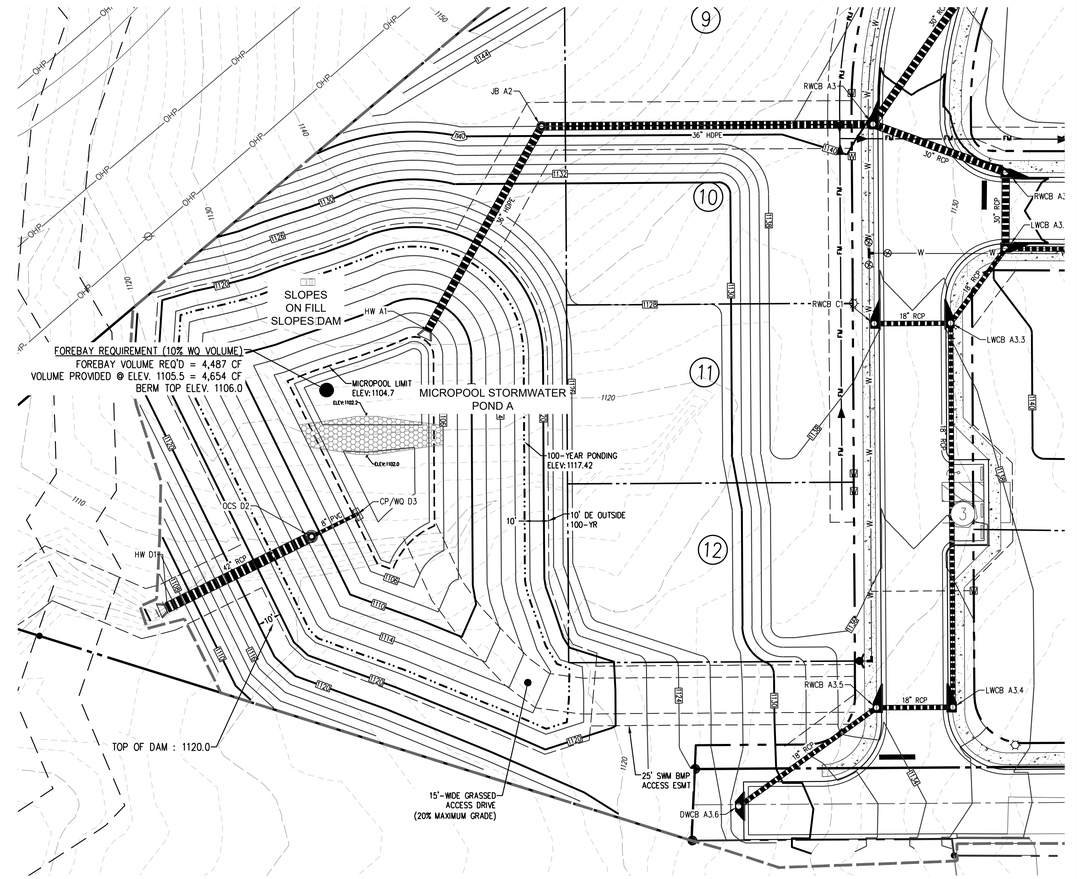
1.) FILL GAP BETWEEN STRUCTURE & PVC WITH MORTAR OR INSTALL A FERNCO ADAPTER.

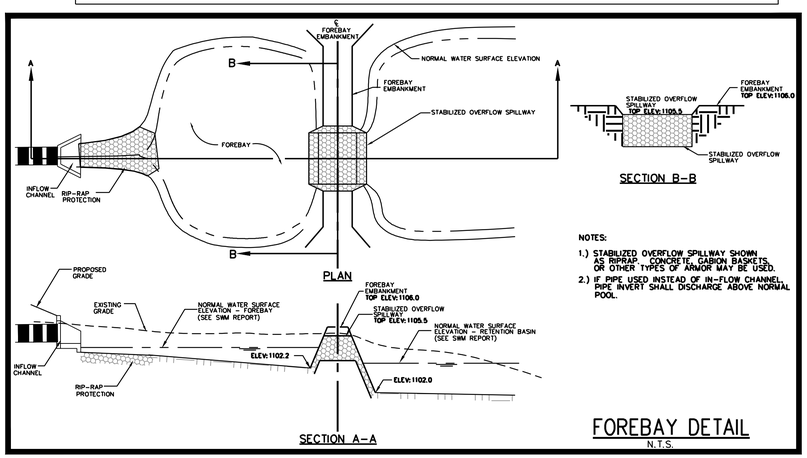
2.) SIZE ORIFICE AS REQUIRED

3.) PIPE SIZE SHALL BE SPECIFIED PER TABLE BELOW. PIPE SIZES SHALL BE CONSISTENT FOR EACH END-CAP ASSEMBLY.

OUTLET ORIFICE DIAMETER	PIPE SIZE
<3"	6"
3" TO <5"	8"
5" TO <11"	12"

ORIFICE END-CAP DETAILS





NOTES:

1.) STABILIZED OVERFLOW SPILLWAY SHOWN AS RIPRAP. CONCRETE, GABION BASKETS, OR OTHER TYPES OF ARMOR MAY BE USED.

2.) IF PIPE USED INSTEAD OF IN-FLOW CHANNEL, PIPE INVERT SHALL DISCHARGE ABOVE NORMAL POOL.

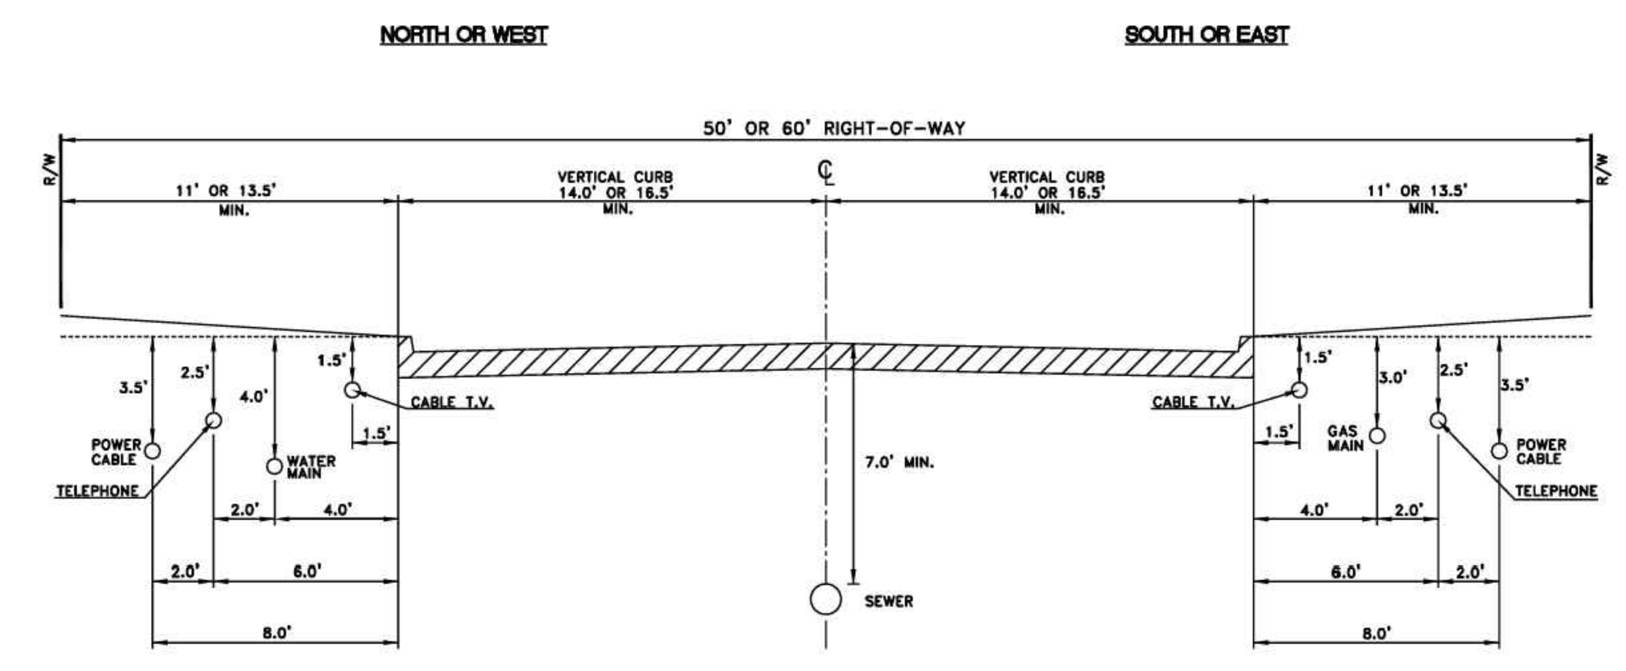
LOCAL OR MINOR COLLECTOR STREETS IN RESIDENTIAL SUBDIVISIONS

NOTES:

1. ANY AREAS OF INADEQUATELY COMPACTED FILL OR UNSUITABLE MATERIAL OF ANY NATURE MUST BE REMOVED AND REPLACED WITH SUITABLE FILL IN WELL COMPACTED LAYERS TO AT LEAST 100% OF MAXIMUM DENSITY (AASHTO T-99), BEFORE ANY TYPE OF PAVING IS APPLIED.
2. DO NOT BEGIN TO APPLY PAVING WITHOUT A RELEASE FROM THE CITY. THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR REPLACING ANY PAVING, BASE, AND SUBGRADE WHICH MAY FAIL BECAUSE OF INADEQUATE SUBGRADE CONDITIONS, AS WELL AS FOR ORDINARY PAVING DEFICIENCIES.
2. "MIN." GAB THICKNESS UNDER CURB & GUTTER TO BE 3".

City of Buford, Georgia
STANDARD DRAWING
Residential Subdivision Streets
DATE: SEPTEMBER 25, 2014 SHEET: 402



NOTES:

1. THIS STANDARD DETAIL IS TO BE USED FOR UTILITY LOCATIONS WITHIN RIGHT-OF-WAY OF SUBDIVISIONS ONLY.
2. BEFORE ANY UTILITY IS INSTALLED, THE ENTIRE WIDTH OF THE RIGHT-OF-WAY IS TO BE ROUGH GRADED. SEE DEVELOPMENT REGULATIONS FOR TIMING OF WATER SYSTEM INSTALLATION.
3. IN GENERAL, THE DEEPEST UTILITIES SHOULD BE INSTALLED FIRST TO MINIMIZE ANY POSSIBLE INTERFERENCE WITH LATERALS OR SERVICE LINES.
4. IN CUL-DE-SAC OR EYEBROW TURNAROUNDS, THE DIMENSIONS FROM THE CURB WILL VARY. HOWEVER, THE STANDARD UTILITY SPACING IS TO BE MAINTAINED.
5. BACKFILL OF ALL UTILITY TRENCHES CONSTRUCTED IN THE ROADWAY SHOULDER IS TO BE COMPACTED TO 95% OF STANDARD PROCTOR (AASHTO T-99).
6. EACH UTILITY IS RESPONSIBLE FOR REPAIR OF ANY DAMAGE THEY CREATE TO OTHER UTILITY LINES, OR TO THE STREET IMPROVEMENTS WITHIN THE RIGHT-OF-WAY. NO UTILITY WILLL BE RESPONSIBLE FOR DAMAGES TO ANOTHER UTILITY WHICH IS LOCATED OUTSIDE THEIR ASSIGNED SPACE.
7. ANYONE DIGGING IN THE RIGHT-OF-WAY MUST CALL THE "ONE CALL CENTER" AT 770-623-7411 TO HAVE UTILITIES LOCATED.
8. ONCE THE ROAD BASE HAS BEEN PLACED, ALL FURTHER INSTALLATION OF UTILITIES UNDER THE ROADWAY MUST BE BORED OR OTHERWISE COMPLY WITH THE STREET CUT REQUIREMENTS OF SECTION 7.5 OF THE DEVELOPMENT REGULATIONS.

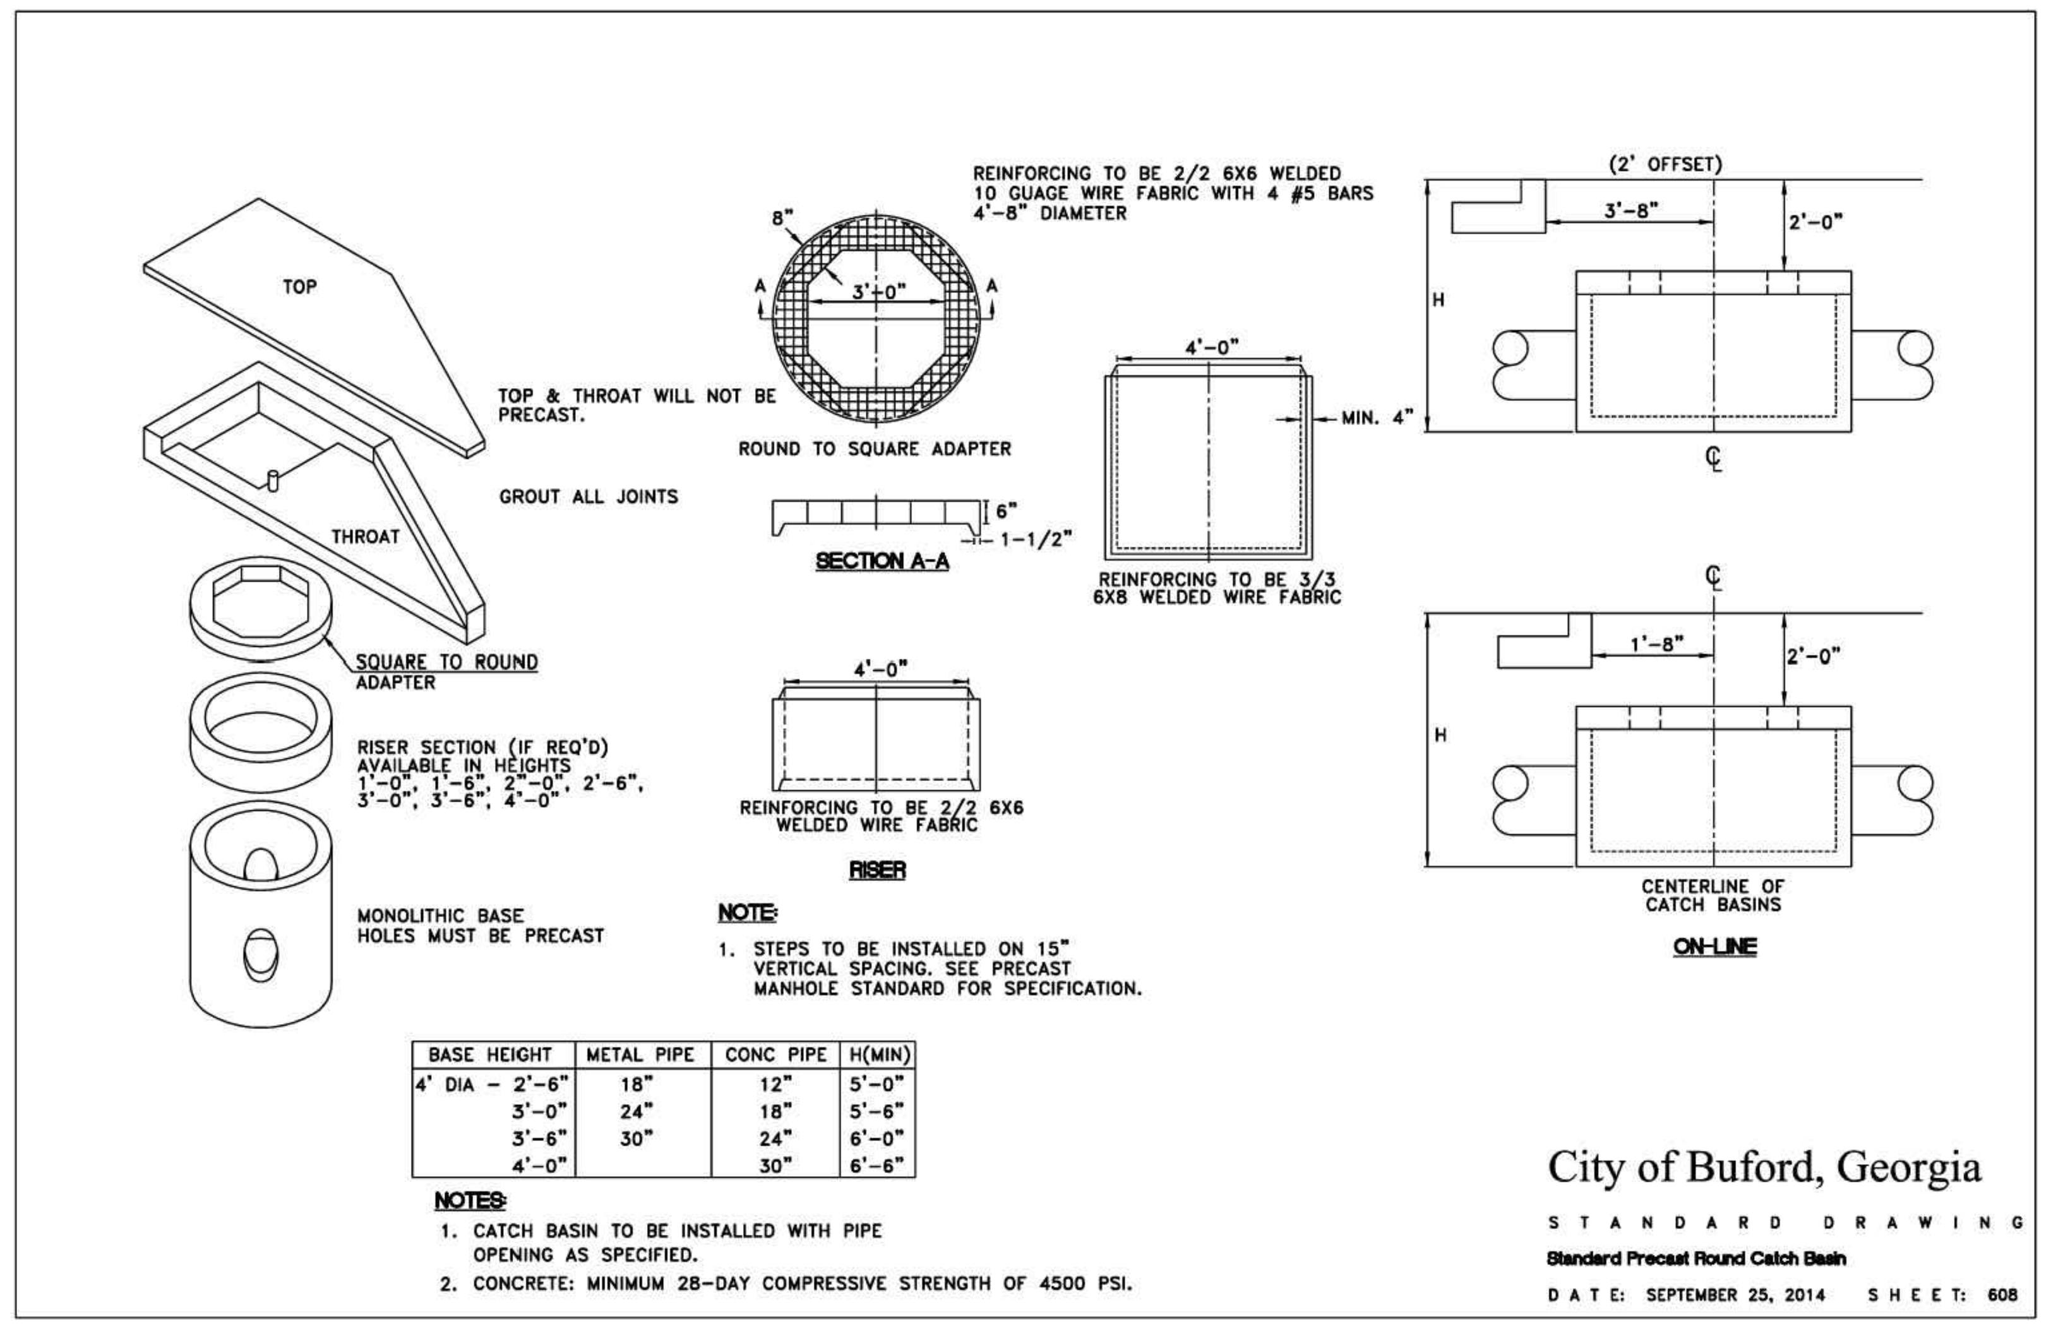
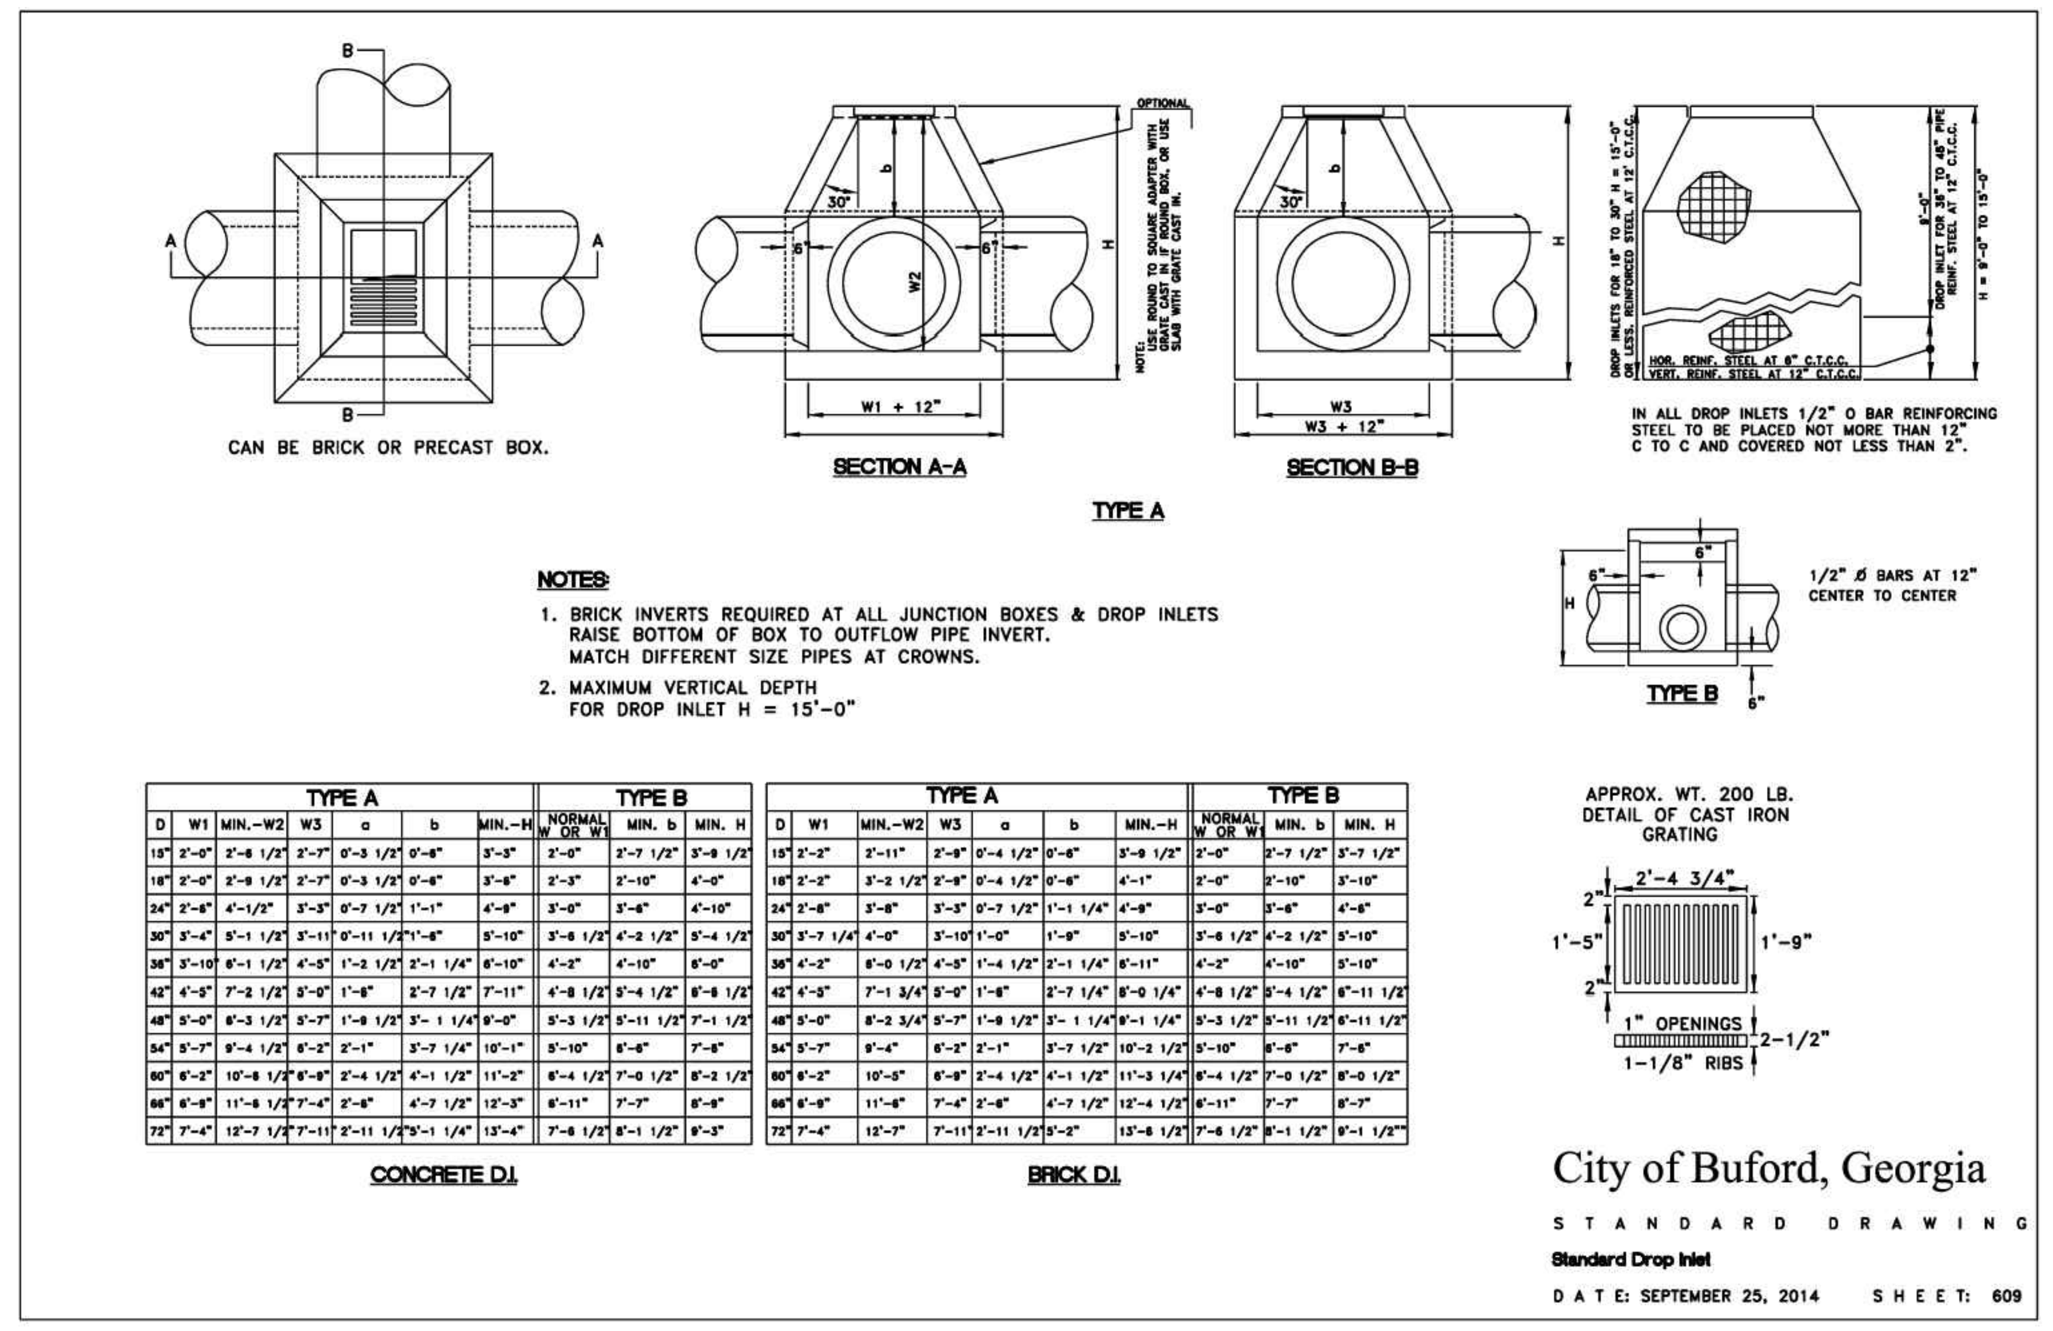
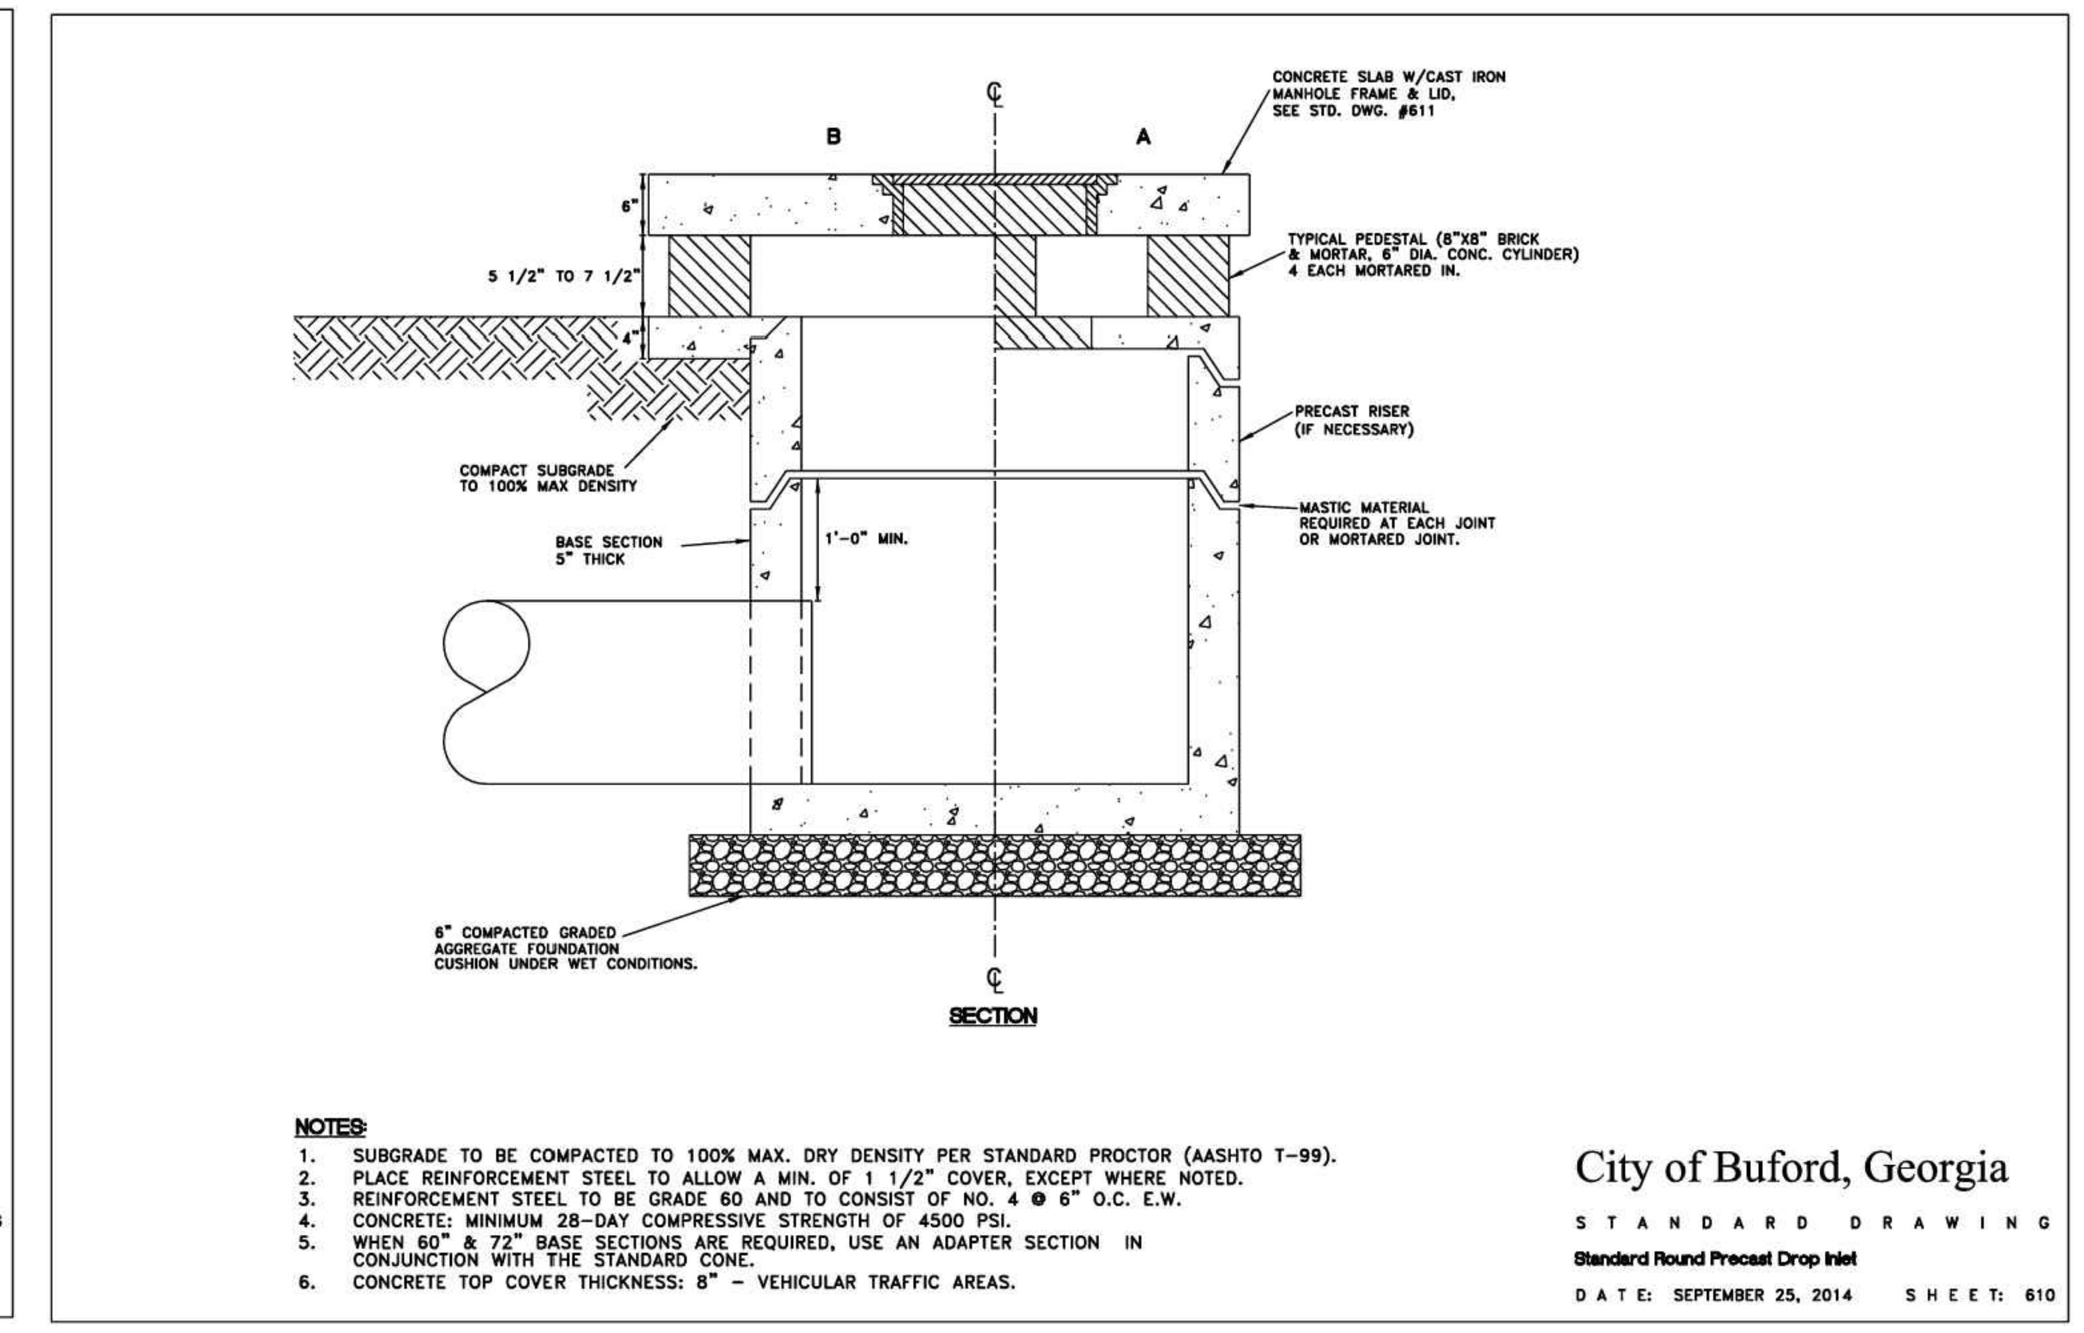
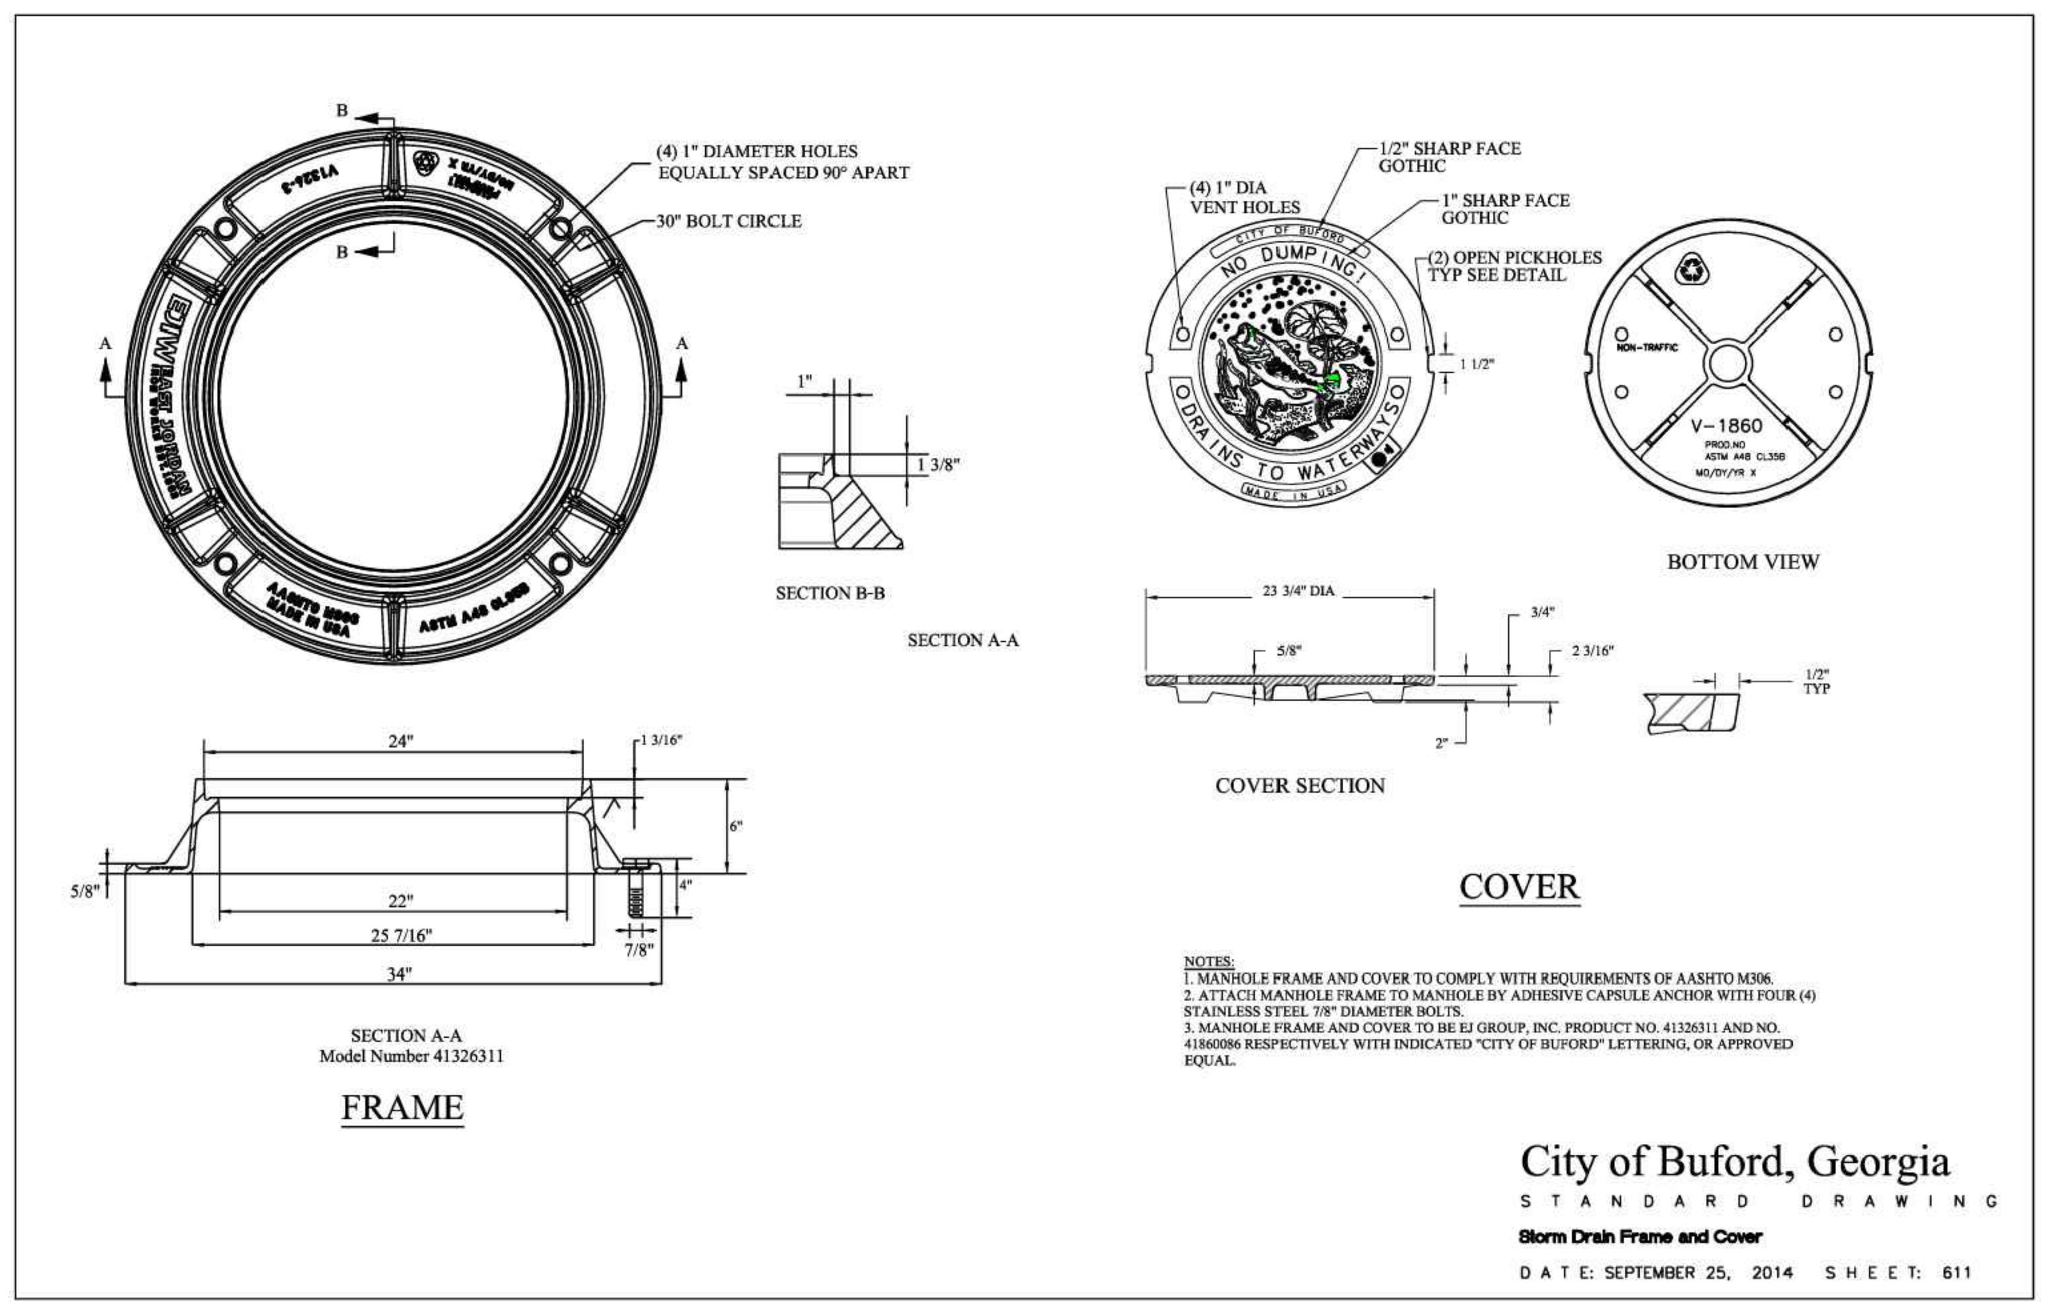
STREET AND STORMWATER CONSTRUCTION DETAILS

PROJECT# 2024.037
C-501









MINIMUM PIPE AND PIPE COATING REQUIREMENTS:

a. REINFORCED CONCRETE PIPE SHALL COMPLY WITH ASTM C-76 AND/OR AASHTO M-170. JOINTS SHALL BE BELL AND SPIGOT TYPES, WITH A RUBBER GASKET CONFORMING TO ASTM C-443. PIPE SHALL BE FURNISHED IN NOT LESS THAN EIGHT (8) FOOT LENGTHS. CLASS OF PIPE AND WALL THICKNESS SHALL BE IN ACCORDANCE WITH TABLE NO. 1 OF GEORGIA DOT STANDARD NUMBER 1030-D, LATEST REVISION. ALL CULVERTS AND DRAINAGE PIPE WITHIN STREET RIGHTS-OF-WAY SHALL BE REINFORCED CONCRETE. CULVERTS AND DRAINAGE PIPE NOT WITHIN A STREET RIGHT-OF-WAY MAY, AT THE DEVELOPER'S OPTION, BE REINFORCED CONCRETE.
b. CORRUGATED, ALUMINUM-COATED STEEL PIPE AND PIPE ARCHES SHALL CONFORM TO THE REQUIREMENTS OF TYPE 2 PIPE PER AASHTO M-196 FOR MATERIAL AND FABRICATION. COATING SHALL COMPLY WITH AASHTO M-274. PIPE FABRICATION SHALL COMPLY WITH AASHTO M-36.
   1. ALL CORRUGATED ALUMINUM COATED STEEL PIPE OR ALUMINUM ALLOY PIPE NOT CARRYING A LIVE STREAM MAY BE PLAIN. ALL CORRUGATED ALUMINUM COATED STEEL PIPE OR ALUMINUM ALLOY PIPES, WHICH WILL CARRY A LIVE STREAM WITHIN A DRAINAGE EASEMENT OR DETENTION FACILITY SHALL HAVE PAVED INVERTS PER AASHTO M-190, TYPE C, EXCEPT THAT THE PIPE NEED NOT BE FULLY COATED.
   2. SEE THE STANDARD DRAWINGS FOR MINIMUM ACCEPTABLE COMBINATIONS OF GAUGES, DIAMETERS, AND CORRUGATION CONFIGURATIONS FOR CORRUGATED ALUMINUM ALLOY PIPE AND FOR CORRUGATED ALUMINUM COATED STEEL PIPE AND PIPE ARCHES.
   3. EACH END OF PIPE SECTION, TO BE JOINTED BY A COUPLING BAND, SHALL HAVE A MINIMUM OF TWO (2) ANNULAR CORRUGATIONS. COUPLING BANDS SHALL BE SO CONSTRUCTED AS TO LAP ON AN EQUAL PORTION OF EACH OF THE PIPE SECTIONS TO BE CONNECTED. THE CONNECTING BANDS SHALL HAVE A MINIMUM OF TWO (2) ANNULAR CORRUGATIONS AND SHALL FULLY ENGAGE, OVER THE ENTIRE PIPE PERIPHERY, ONE CORRUGATION ON EACH PIPE END. BANDS SHALL BE FABRICATED FROM THE SAME MATERIAL AS IS THE PIPE., THE MINIMUM BAND GAUGES FOR ALUMINUM PIPE AND ALUMINIZED PIPE SHALL BE AS SPECIFIED IN AASHTO M196, SECTION 19, AND AASHTO M-36, SECTION 9, RESPECTIVELY.
   4. GASKETS MAY BE REQUIRED AS DETERMINED BY THE CITY IN THE FIELD AND SHALL BE EITHER SLEEVE TYPE OR O-RING TYPE, AND SHALL MEET THE REQUIREMENTS FOR GASKETS AS SPECIFIED IN SECTION 9.3 OF AASHTO M-36.
c. CORRUGATED PLASTIC PIPE, NOMINAL FIFTEEN (15) INCH TO FORTY EIGHT (48) INCH DIAMETERS, SHALL BE HIGH DENSITY CORRUGATED POLYETHYLENE SMOOTH INTERIOR PIPE AND FITTINGS CONFORMING TO AASHTO M-294, TYPE S. JOIN PIPE SECTIONS WITH BELL AND SPIGOT JOINTS OR HIGH DENSITY POLYETHYLENE CORRUGATED COUPLINGS THAT LAP AT LEAST TWO (2) FULL CORRUGATIONS OF EACH PIPE SECTION. FOR ALL JOINT SYSTEMS, PROVIDE A GASKETED POSITIVE CLOSURE DEVICE WHICH ACHIEVES LEAK-FREE JOINT PERFORMANCE. USE STANDARD, FACTORY-FABRICATED ADAPTERS, WYES, TEES AND OTHER FITTINGS COMPARABLE TO PIPE WITH WHICH CONNECTED.
d. CORRUGATED ALUMINUM ALLOY STRUCTURAL PLATE PIPE, PIPE ARCHES, AND ARCHES SHALL CONSIST OF ALUMINUM PLATES AND GALVANIZED BOLTS AND NUTS OF THE SIZE, SHAPE AND THICKNESS AS SHOWN ON THE APPROVED PLANS. THESE STRUCTURES SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-219.

PIPE INSTALLATION:

INSTALL CORRUGATED PLASTIC PIPE IN ACCORDANCE WITH PIPE SYSTEM MANUFACTURE'S PUBLISHED LITERATURE, ASTM D-2321, AASHTO SECTION 30, OR CITY SPECIFICATIONS, WHICHEVER IS MORE RESTRICTIVE.

REINFORCED CONCRETE PIPE, CORRUGATED STEEL PIPE AND ASPHALT COATED PIPE SHALL BE BEDDED AND BACKFILLED IN THE SAME MANNER.

a. BEDDING: ALL PIPE STRUCTURES SHALL BE PLACED ON STABLE EARTH OR FINE GRANULAR FOUNDATION, THE CHARACTERISTICS OF WHICH WOULD BE EXPECTED TO PROVIDE LONG-TERM STABILITY. IN ALL LIVE STREAM PIPE INSTALLATION, IN AREAS OF LOW BEARING SOILS OR NON UNIFORM FOUNDATIONS, IN AREAS WHERE ROCK IS ENCOUNTERED AT THE FOUNDATION LEVEL, OR IN OTHER LOCATIONS WHERE CONDITIONS WARRANT, A MINIMUM OF SIX (6) INCHES OF CRUSHED STONE BEDDING IS REQUIRED, (MAXIMUM SIZE OF STONE SHALL BE ¾"). GEOTEXTILES OR GEOGRIDS MAY ALSO BE REQUIRED BY THE CITY IN PROBLEM AREAS.
b. BACKFILLING: BACKFILL ON ALL PIPE INSTALLATIONS SHALL BE CONSTRUCTED USING FOUNDATION BACKFILL MATERIAL TYPE I OR TYPE II, AS SPECIFIED IN SECTION 812.01 AND 812.02 RESPECTIVELY, IN GEORGIA DOT STAND SPECIFICATIONS. THESE MATERIALS SHALL BE PLACED IN LAYERS OF NOT MORE THAN SIX (6) INCHES LOOSE. COMPACTION OF THESE MATERIALS SHALL BE ACCOMPLISHED BY HAND TAMPING OR MACHINE TAMPING. REQUIRED COMPACTION LEVELS ARE AS FOLLOWS:
   1. BACKFILL WITHIN ALL STREET RIGHTS-OF-WAY SHALL BE COMPACTED TO NINETY-FIVE (95) PERCENT MAXIMUM DENSITY, TESTED USING THE AASHTO METHOD T-99.
   2. BACKFILL IN ALL OTHER AREAS SHALL BE COMPACTED TO NINETY-FIVE (95) PERCENT MAXIMUM DENSITY, TESTED USING THE AASHTO METHOD T-99.
c. CONSTRUCTION LOADS AND MINIMUM COVERS: IF DRAINAGE PIPE IS INSTALLED PRIOR TO THE COMPLETION OF GRADING, A MINIMUM OF FOUR (4) FEET OF FILL SHOULD BE PROVIDED WHERE NEEDED TO ADEQUATELY PROTECT THE DRAINAGE STRUCTURE DURING THE LAND DEVELOPMENT PHASE, UNLESS THE STRUCTURE ITSELF IS DESIGNED TO WITHSTAND THE ANTICIPATED LIVE LOAD DURING CONSTRUCTION.

SECTION

N.T.S.

NOTES:

1. SEWER STRUCTURE STEP REQUIREMENTS:
Provide individual steps, mortared or cast into walls and conical tops of all manholes and similar structures. Align steps so as to form a continuous ladder with steps equally spaced vertically, no more than 16 inches apart, using steps having a minimum length of 10-inches and which project a minimum clear distance of four inches from the wall. Steps, fastenings and installation must be capable of supporting a single concentrated load of 300 pounds. Use designs based on imposed loads being concentrated at such points as will cause maximum stresses in the structural element being considered. Construct individual steps as one piece, ferrous casting or plastic coated steel meeting requirements of ASTM D4101-95b and A 615 grade 60.

2. Provide watertight boot sleeve of high quality synthetic rubber. Terminate the sleeve at one end in a substantial serrated flange of the same material and cast into the wall of the manhole base to form a water stop. Embed the flange in the wall no less than 4-inches around the entire pipe. Fit the other end of the sleeve around the outside of the pipe and secure to the pipe by means of a stainless steel strap clamp, draw bolt and nut. Furnish synthetic rubber suitable for use in sewage service.

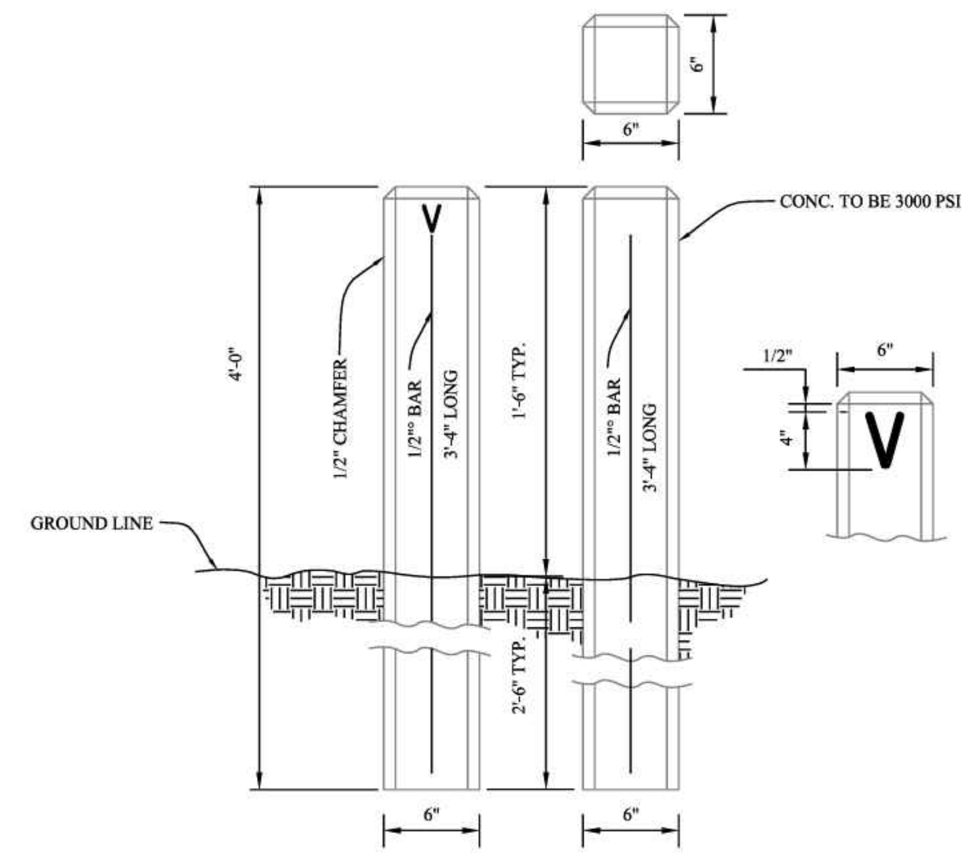
TYPICAL GATE VALVE INSTALLATION

City of Buford, Georgia

STANDARD DRAWING

Typical Gate Valve and Valve Box Installation

DATE: SEPTEMBER 25, 2014 SHEET: 1104



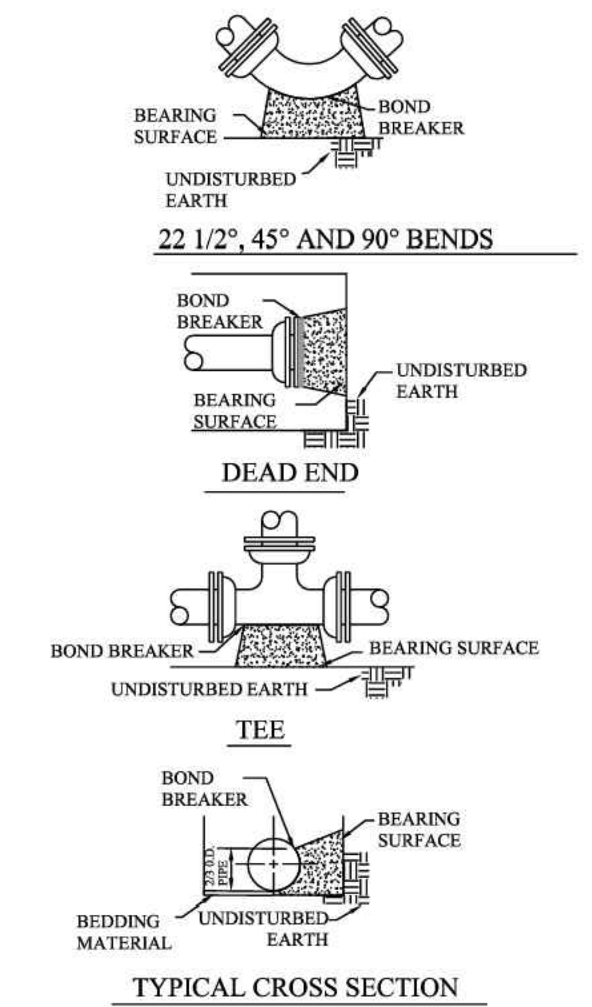
TYPICAL WATER VALVE MARKER

City of Buford, Georgia

STANDARD DRAWING

Typical Water Valve Marker

DATE: SEPTEMBER 25, 2014 SHEET: 1105



MINIMUM BEARING SURFACE AREA (SQ. FT.)				
PIPE SIZE	BENDS			TEE OR DEAD END
	22.5°	45°	90°	
4"	1.00	1.00	2.00	1.50
6"	1.25	2.25	4.75	3.00
8"	2.00	4.00	8.20	5.25
12"	4.25	8.25	16.75	11.00
16"	6.50	12.50	23.00	16.50
20"	10.00	19.50	35.50	25.00

NOTES

1. BEARING SURFACES IN CHART ARE MINIMUM REQUIRED AREAS BASED ON THE FOLLOWING:
   A. SOIL BEARING CAPACITY = 3000 PSF
   B. INTERNAL PIPE PRESURE = 150 PSI + WATER HAMMER OF 120 PSI FOR 4"- 8" SIZE, 110 PSI FOR 12" SIZE, AND 70 PSI FOR 16" AND 20" SIZES.
2. ACTUAL SOIL AND INSTALLATION CONDITIONS VARY AND MAY REQUIRE ADDITIONAL ANCHORAGE. IT IS THE CONTRACTORS RESPONSIBILITY TO RECOGNIZE SUCH VARIANCES AND ADDITIONAL REQUIREMENTS AND TO PROVIDE APPROPRIATE ADDITIONAL ANCHORAGE.
3. PROVIDE CONCRETE REACTION OR THRUST BACKING OF A MIX NOT LEANER THAN 1 CEMENT, 2 - 1/2 SAND, 5 STONE, HAVING COMPRESSIVE STRENGTH OF NOT LESS THAN 2,000 PSI. PLACE BACKING BETWEEN SOLID GROUND AND THE FITTING TO BE ANCHORED. LOCATE THE BACKING SO THAT THE PIPE AND THE FITTING JOINT WILL BE ACCESSILE FOR REPAIRS. MECHANICAL JOINT RETAINER GLANDS OF ADEQUATE STRENGTH TO PREVENT MOVEMENT OR OTHER SUITABLE MEANS MAY BE USED INSTEAD OF CONCRETE BACKING.

Erosion, Sedimentation, and Pollution Control Plan General Notes

(IN CONFORMANCE WITH GENERAL NPDES PERMIT NO. GAR 100003. IT IS HIGHLY RECOMMENDED THAT THE PERMITTEE READ AND UNDERSTAND THE TERMS AND CONDITIONS OF THE PERMIT.)

Project Data

(5) Primary Permittee: SOUTHERN HERITAGE HOMES
390 BROGDON ROAD, SUWANEE GA, 30024
TEL: 770-527-3030
EMAIL: MP@SOUTHERNHERITAGEHOMESGA.COM
(4) 24 HR CONTACT: MICHAEL PHELPS

Engineer: BLUE LANDWORKS LLC
5019 WEST BROAD STREET, SUITE M230
SUGAR HILL, GA 30518
(678) 804-8586

Contact: Taylor Anderson, PE (ta@bluelandworks.com)
(2) GSWCC Level II Certification No. 3414

(6) Total Gross Area: 9.76 AC
Total Disturbed Area: 9.7± AC

(7) Construction Exit GPS Location: 34.112525°, -84.010727°

Existing Land Use / Site Description: Existing Wooded Site

(9) Proposed Construction Activity: Clearing and grubbing, grading, paving, utility installation for proposed subdivision.

(11) Name of Receiving Waters: SUWANEE CREEK

(23) Construction activity DOES discharge storm water into or within 1 linear mile upstream of and within the same watershed as, any portion of a Impaired Stream Segment that has been listed for the criteria violated, "Bio F" (Impaired Fish Community) and/or "Bio M" (Impaired Macroinvertebrate Community),within Category 4a, 4b or 5, and the potential cause is either "NP" (nonpoint source) or "UR" (urban runoff) per 2014 Integrated 305(b)/303(d) List.

(43) Adjacent Area Impacts: There are NO known impacts to wetlands or state waters located adjacent to the project site and adjacent residential areas shall not be affected.

(44) Area of On-Site Waters and Wetlands: There are NO wetlands and state waters located on-site. NO wetland or stream impacts are shown. The Developer is responsible for contracting with a qualified wetland consultant to perform a wetlands delineation and USACE permitting, if necessary.

(47) Pre-Construction runoff coefficient/curve number = 55
Post-Construction runoff coefficient/curve number = 62

Design Professional's Certification:

(12) 1) I certify under penalty of law that this plan was prepared after a site visit to the locations described herein by myself or my authorized agent, under my supervision.

(13) 2) I certify that the permittee's Erosion, Sedimentation, and Pollution Control Plan provides for an appropriate and comprehensive system of best management practices required by the Georgia Water Quality Control Act and the document "Manual for Erosion and Sediment Control in Georgia" (Manual) published by the State Soil and Water Conservation Commission as of January 1 of the year in which the land-disturbing activity was permitted, provides for the sampling of the receiving water(s) or the sampling of the storm water outfalls and that the designed system of best management practices and sampling methods is expected to meet the requirements contained in the General NPDES Permit No. GAR 100003.

GEORGIA REGISTERED No. 28552 PROFESSIONAL ENGINEER TAYLOR ANDERSON

3-5-2025
Signed and Sealed — Date

GSWCC Level II Certification No. 3414

(14) **The design professional who prepared the erosion, sedimentation, and pollution control plan is to inspect the installation of the initial sediment storage requirements and perimeter control BMPs within seven (7) days after installation.** It is the responsibility of the primary permittee to notify the licensed professional when initial construction activities will commence. The licensed professional shall determine if these BMPs have been installed and are being maintained as designed. The licensed professional shall notify the primary permittee and the permittee must correct all deficiencies within two business days of the inspection by the licensed professional.

DESIGN PROFESSIONAL 7-DAY VISIT CERTIFICATION

DATE OF INSPECTION _____
I certify the site was in compliance with the ESPCP Plan on the date of inspection.

GSWCC LEVEL II DESIGN PROFESSIONAL — CERTIFICATION #

Inspection revealed the following discrepancies from the ESPCP Plan.

These deficiencies must be addressed immediately and a re-inspection scheduled. Work shall not proceed on the site until Design Professional Certification is obtained.

General Construction Specifications

1) All timber having a marketable value shall be salvaged. Timber logs, rubbish, and vegetative matter which will interfere with the grading operations or affect the planned stability of fill areas shall be removed and disposed of according to the permittee's instructions and in accordance with all local and state laws.
2) Topsoil is to be stripped and stockpiled in amounts necessary or available on site to complete final grading of all exposed areas.
3) Fill material is to be free of brush, rubbish, rocks, logs, and stumps in amounts that are detrimental to constructing stable fills.
4) Cut slopes which are to be topsoiled will be scarified to a minimum depth of 3 inches prior to placement of topsoil.
5) Compaction of fills will be as required to reduce slipping, erosion, or excess saturation.
6) Frozen mixtures of soft, mucky, or easily compressible materials are not to be incorporated in fills intended to support buildings, parking lots, roads, structures, sewers, or conduits.
7) Consult the geotechnical engineer for recommendations concerning proper placement and compaction of structural fill.
8) All disturbed areas shall be left with a neat and finished appearance and stabilized with the appropriate permanent protective cover.
9) Cut or fill slopes to be no greater than 2 feet horizontal to 1 foot vertical.
10) All proposed grades shown are finished rough grades, unless otherwise noted.
11) All construction shall conform with the specifications, the details shown within these plans, and/or the current version of the "Manual for Erosion and Sediment Control in Georgia"

(15) NON-EXEMPT ACTIVITIES:
Non-exempt activities shall not be conducted within the 25 or 50-foot undisturbed stream buffers as measured from the point of wrested vegetation or within 25-feet of the coastal marshland buffer as mentioned from the Jurisdictional Determination Line without first acquiring the necessary variances and permits.

(16) **There are NO buffer encroachments; NO buffer variances required.**

(17) AMENDMENTS/REVISIONS:
Amendments/revisions to the ES&PC Plan which have a significant effect on BMPs with a hydraulic component must be certified by the design professional.

(18) WASTE MATERIALS:
Waste materials shall not be discharged to waters of the State, except as authorized by a section 404 permit.

(19) STABILIZATION MEASURES:
The escape of sediment from the site shall be prevented by the installation of erosion and sediment control measures and practices prior to land disturbing activities.

(21) **Any disturbed area left exposed for a period of greater than 14 days shall be stabilized with mulch or temporary seeding.**

The stabilization measures shown on this Plan have been designed to stabilize the disturbed areas following the temporary or permanent completion of construction. All grubbed areas shall be stabilized with temporary mulching (Ds1) prior to grading if they are to remain inactive for 14 days or more. All disturbed areas shall be stabilized with temporary (Ds2) or permanent (Ds3) vegetation as indicated on the plan. Ditches, temporary diversion berms, and slopes (which have 3:1 or steeper slope and 10 feet or more height) are to be stabilized with channel stabilization (Ch) and slope stabilization (Ss). Dust control (Du) shall also be provided as needed during grading activities.

(20) MAINTENANCE:
Erosion control measures will be maintained at all times. If the full implementation of the approved plan does not provide for effective erosion control, additional erosion and sediment control measures shall be implemented to control or treat the sediment source. Refer to the details contained within this Plan for additional maintenance instruction.

(25) CONCRETE WASHDOWN

Washout of the drum at the construction site is prohibited. Following is a procedure to washdown tools, chute and hopper:
1. Coordinate with site superintendent to excavate a pit deep enough to contain washdown water.
2. Back in equipment.
3. Washdown only the chute, hopper and rear of the vehicle, do not wash out the drum.
4. Make sure washdown water goes into and stays in the pit.
5. Coordinate with site superintendent to fill in pit and smooth out ground.

(26) PETROLEUM SPILL AND LEAK CLEANUP CONTROL PRACTICES:

(28) (1) Local, State, and manufacturer's recommended methods for spill cleanup shall be clearly posted and procedures shall be made available to site personnel.
(2) Material and equipment necessary for spill cleanup shall be kept in the material storage areas.
(3) Spill prevention practices and procedures shall be reviewed after a spill and adjusted as necessary to prevent future spills.
(4) All spills will be cleaned immediately upon discovery. All spills shall be reported as required by local, State and Federal regulations.
(5) The discharge of hazardous substances or oil in the storm water discharge(s) from a site shall be prevented.
(6) Where a release containing a hazardous substance in an amount equal to or in excess of a reporting quantity established under either Georgia's Oil or Hazardous Material Spills Law Article Act (O.C.G.A. Sec. 12-14-2, et seq.), 40 CFR 117, or 40 CFR 302 occurs during a 24-hour period, the permittee is required to notify EPD at (404) 656-4863 or (800) 241-4113 and the National Response Center (NRC) at (800) 424-8802 in accordance with the requirements of Georgia's Oil or Hazardous Material Spills or Releases Act (O.C.G.A. Sec. 12-14-2, et seq.), 40 CFR 117, and 40 CFR 302 as soon as he has knowledge of the discharge.
(7) For spills that impact surface water (leave a sheen on surface water) or spills of an unknown amount, the National Response Center (NRC) shall be contacted within 24 hours at (800) 424-8802.
(8) For spills greater than 25 gallons and no surface water impacts, the Georgia EPD shall be contacted within 24 hours at (404) 656-4863 or (800) 241-4113.
(9) For spills less than 25 gallons and no surface water impacts, the spill shall be cleaned and local agencies shall be contacted as required.
(10) General NPDES Permit No. GAR 100001 does not authorize the discharge of hazardous substances or oil resulting from an on-site spill.

(27) BUILDING MATERIALS AND PRODUCTS CONTROL PRACTICES:

Use plastic sheeting or temporary roofs to cover building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste and other materials in order to minimize exposure to precipitation and stormwater.

(29) PRODUCT SPECIFIC PRACTICES:
Petroleum Based Products – Containers for products such as fuels, lubricants, and tars will be inspected daily for leaks and spills. This includes onsite vehicle and machinery daily inspections and regular preventative maintenance of such equipment. Equipment maintenance areas will be located away from State Waters, natural drains, and storm water drainage inlets. In addition, temporary fueling tanks shall have a secondary containment liner to prevent/minimize site contamination. Discharge of oils, fuels, and lubricants is prohibited. Proper disposal methods will include collection in a suitable container and disposal as required by local and State regulations.

Paints/Finishes/Solvents – All products will be stored in tightly sealed original containers when not in use. Excess product will not be discharged to the storm water collection system. Excess product, materials used with these products, and product containers will be disposed of according to manufacturer's specifications and recommendations.

Concrete Truck Washing – NO concrete trucks will be allowed to wash out or discharge surplus concrete or drum wash water onsite.

Fertilizer/Herbicides – These products will be applied at rates that do not exceed the manufacturer's specifications or above the guidelines set forth in the crop establishment or in the GSWCC Manual for Erosion and Sediment Control in Georgia. Any storage of these materials will be under roof in sealed containers.

Building Materials – No building or construction materials will be buried or disposed of onsite. All such material will be disposed of in proper waste disposal procedures.

WASTE MATERIALS AND DISPOSAL:
Waste Disposal: No solid materials, including building materials, shall be discharged to waters of the State, except as authorized by a Section 404 permit.

All waste materials shall be collected and stored in a securely lidded metal dumpster or other appropriate waste management facility permissible under GAR permit No. 100001. Waste management facilities shall meet all solid waste management regulations. All trash and construction debris from the site shall be deposited in the waste management facilities. Waste management facilities shall be emptied a minimum of once per week or more often if necessary and trash shall be hauled as required by local regulations. No construction waste shall be buried on-site.

All personnel shall be instructed on proper procedures for waste disposal. A notice stating these practices shall be posted at the job site and the Contractor shall be responsible for seeing that these procedures are followed.

HAZARDOUS WASTES:
All hazardous waste materials shall be disposed of in the manner specified by local, state, and/or federal regulations and by the manufacturer of such products. The job site superintendent, who will also be responsible for seeing that these practices are followed, shall instruct site personnel in these practices. Material Safety Data Sheets (MSDS's) for each substance with hazardous properties that is used on the job site shall be obtained and used for the proper management of potential wastes that may result from these products. An MSDS shall be posted in the immediate area where such product is stored and/or used and another copy of each MSDS shall be maintained in the ESPCP file at the job site construction trailer office. Each employee who handles a substance with hazardous properties will be instructed on the use of MSDS sheets and the specific information in the applicable MSDS for the product he/she is using, particularly regarding spill control.

No spilled hazardous materials or hazardous wastes shall be allowed to come in contact with storm water discharges. If such contact occurs, the storm water discharge shall be contained on site until appropriate measures in compliance with state and federal regulations are taken to dispose of such contaminated storm water.

NON-STORM WATER DISCHARGES:
Except for flows from fire fighting activities, sources of non-storm water listed in Part III.A.2. of this permit that are combined with storm water discharges associated with construction activity must be identified in the Plan. The Plan shall identify and ensure the implementation of appropriate pollution prevention measures for the non-storm water component(s) of the discharge.

CRITICAL WORK ZONE:
All slopes 2:1 or steeper and higher than 5 feet shall receive surface roughening, polymers, and erosion control matting. Additionally, all fill slopes shall receive a diversion dike and temporary down drains along the top of the slope preventing drainage spilling over the edge and down the face of the slope. The temporary down drains shall be constructed with perforated stand pipes at the top of the slope and reconstructed as the slope increases in height.

KEEPING THE PLANS CURRENT:
The primary permittee(s), as applicable, who began construction on or before the effective date of this permit shall amend their Plan whenever their is a change in design, construction, operation, or maintenance, which has significant effect on BMPs with a hydraulic component, i.e., those BMPs where the design is based upon rainfall intensity, duration and return frequency of storms or on the potential for the discharge of pollutants to the waters of Georgia and which has not otherwise been addressed in the Plan, if the Plan proves to be ineffective in eliminating or significantly minimizing pollutants from sources identified under Part IV.D.2 of this permit, or if the plan proves to be ineffective in achieving the general objectives of controlling pollutants in storm water discharges associated with construction activity. Amendments to the Plan must be certified by a design professional.

OFFSITE VEHICLE TRACKING
A stabilized construction exit (Co) shall be provided to reduce vehicle tracking of sediment. See ESPCP plan sheets for the construction exit locations and detail. The paved street adjacent to the construction exit shall be inspected daily for tracking of mud, dirt, or rock. Dump trucks hauling material from the construction site shall be covered with a tarpaulin.

SANITARY WASTES:
All permittees shall ensure that this Plan is in compliance with applicable State and/or local waste disposal, and sanitary sewer or septic system regulations.

A minimum of one portable sanitary unit shall be provided for every ten (10) workers on the site. All sanitary waste shall be collected from the portable units a minimum of one time per week by a licensed portable facility provider in complete compliance with the local state regulations.

All sanitary waste units shall be located in an area where the likelihood of the unit contributing to storm water discharge is negligible. Additional containment of BMP's shall be implemented as necessary, such as gravel bags or specifically designed plastic skid containers around the base, to prevent waste from contributing to storm water discharges.

Sanitary sewer shall be provided by municipal authority at the completion of this project.

STORM WATER MANAGEMENT:
Storm water detention for the site will be provided by a proposed onsite stormwater management facility.

SEDIMENT STORAGE: Sediment storage will be provided by the proposed onsite stormwater management facility.

(28) POST-CONSTRUCTION STORM WATER POLLUTANT CONTROL:
A dry extended stormwater detention facility will serve as a water quality BMP's to control pollutants in storm water discharges that occur after construction operations have been completed. The facility has also been designed to detain the one-year channel protection volume and to provide peak flow attenuation. Storm outlet protection aprons shall be placed downstream of storm water discharge locations to provide non-erosive flow so that the natural, physical, and biological characteristics and functions of the watercourse are maintained and protected. The installation of these devices may be subject to Section 404 of the Federal Clean Water Act. The permittee is only responsible for the installation and maintenance of stormwater management devices prior to final stabilization of the site and is not responsible for the operation and maintenance of such structures after construction activities have been completed.

(29) (37) STRUCTURAL PRACTICES:
The structural practices shown on this Plan have been designed to divert flows from exposed soils, store flows, or otherwise limit runoff and the discharge of pollutants from exposed areas of the site. For sediment and erosion control purposes, structural practices have been shown in three different phases, based on construction activities. These phases include initial, intermediate grading and final stabilization.

During the initial phase (sheet E-101), there will one construction exit (Co) off Smokey Road for the project site. Prior to clearing the entire site, provide tree save fencing (Tr) and silt fence (Sd1-S) as shown within the limits of disturbance. The proposed stormwater management (SWM) facility with floating surface skimmer (Sk) connected to the outlet control structure (at the water quality orifice location) in the SWM facility to dewater from the surface to provide sediment control. Storm outlet protection (St) will be installed at the SWM facility outfall location. Diversion berms (Di) with channel stabilization (Ch-1 & Ch-2) will be constructed to divert stormwater flows into the SWM facility. Mulching (Ds1), temporary seeding (Ds2) along with Dust control (Du) shall be utilized as needed and if soil is left exposed for a period greater than 14 days.

During the intermediate grading phase (sheet E-102), storm drainage systems will be installed. Floating surface skimmers (Sk) shall remain at the SWM facility. Roads and building sites will be brought to subgrade and water lines will be installed. Excavated silt fence with attached silt stratum or storm drainage inlets to prevent sediment from entering the drainage system. Storm outlet protection (St) will remain at the outfall locations. Permanent seeding (Ds3) shall be utilized on sloped areas at final grade. Mulching (Ds1), temporary seeding (Ds2) along with Dust control (Du) shall be utilized as needed and if soil is left exposed for a period greater than 14 days.

During the final grading phase (sheet E-103), fine grading will occur and pavement will be provided. All non-paved disturbed areas shall receive permanent seeding (Ds3) and slope stabilization (Ss). Silt fence (Sd1-S) shall be removed from the existing detention facility. Once permanent vegetation has been established and site is stabilized, the skimmer (Sk) shall be removed from SWM facility.

RECORD OF DATES – MAJOR GRADING ACTIVITIES

(Note to primary, secondary, and tertiary permittees: complete the following table to include the dates when initial construction activities commence, when all major construction activities (e.g. clearing and grubbing activities, excavation activities, grading activities, infrastructure activities, intermediate and final stabilization activities) occur, when construction activities temporarily or permanently cease on a portion of the site, and when stabilization measures are initiated. The licensed professional who prepared this plan shall be notified when this table is amended.)

DATE	DESCRIPTION OF CONSTRUCTION ACTIVITY

The primary permittees ES&PC Plan is to be provided to each secondary permittee prior to the secondary conducting any construction activity and that each secondary shall sign the Plan or portion of the Plan applicable to their site.

(31) The primary permittee must provide a copy of the Plan or applicable portions of the Plan and copy of the primary permittee's most current Notice of Intent to each secondary permittee prior to the secondary permittee conducting any construction activity. Any revisions to the Plan and/or the Notice of Intent must be provided to the secondary permittees in a timely manner. A written acknowledgment of receipt of the Plan and Notice of Intent must be made by the secondary permittee and a copy of such be retained in the primary permittee's records in accordance with Part IV.F. of this permit. If the primary permittee changes after the Plan is prepared and implemented, any subsequent primary permittee must ensure that the Plan complies with all terms and conditions of this permit and that each secondary permittee is provided with any revisions to the Plan and Notice of Intent made by the new primary permittee. A written acknowledgment of receipt of the Plan or amendments to the Plan and Notice of Intent must be made by the secondary permittee and a copy of such be retained in the new primary permittee's records in accordance with Part IV.F. of the NPDES Permit No. GAR 100003.

(22) Secondary permittees are unknown at the time of plan submittal. Secondary permittees shall be identified prior to NOT.

GEORGIA UNIFORM CODING SYSTEM

FOR SOIL EROSION AND SEDIMENTATION CONTROL PRACTICES

GEORGIA SOIL AND WATER CONSERVATION COMMISSION

STRUCTURAL PRACTICES

CODE	PRACTICE	DETAIL	MAP SYMBOL	DESCRIPTION
Cd	CHECKDAM		Cd	A small temporary barrier or dam constructed across a swale, drainage ditch or area of concentrated flow.
Ch	CHANNEL STABILIZATION		Ch	Improving, constructing or stabilizing an open channel, existing stream, or ditch.
Co	CONSTRUCTION EXIT		Co	A crushed stone pad located at the construction site exit to provide a place for removing mud from tires thereby protecting public streets.
Cr	CONSTRUCTION ROAD STABILIZATION		Cr	A roadway constructed as part of a construction plan including access roads, subdivision roads, parking areas and other on-site vehicle transportation routes.
Dc	STREAM DIVERSION CHANNEL		Dc	A temporary channel constructed to convey flow around a construction site while a permanent structure is being constructed.
Di	DIVERSION		Di	An earth channel or dike located above, below, or across a slope to divert runoff. This may be a temporary or permanent structure.
Dn1	EMPORARY DOWNDRAIN STRUCTURE		Dn1	A flexible conduit of heavy-duty fabric or other material designed to safely conduct surface runoff down a slope. This is temporary and inexpensive.
Dn2	PERMANENT DOWNDRAIN STRUCTURE		Dn2	A paved chute, pipe, sectional conduit or similar material designed to safely conduct surface runoff down a slope.
Fr	FILTER RING		Fr	A temporary stone barrier constructed at storm drain inlets and pond outlets.
Ga	GABION		Ga	Rock filter baskets which are hand-placed into position forming self stabilizing structures.
Gr	GRADE STABILIZATION STRUCTURE		Gr	Permanent structures installed to protect channels or waterways where otherwise the slope would be sufficient for the running water to form gullies.
Lv	LEVEL SPREADER		Lv	A storm flow outlet device constructed at zero grade across the slope whereby concentrated runoff may be discharged at a non-erosive velocity onto undisturbed areas stabilized by existing vegetation.
Rd	RIDGE FILTER DAM		Rd	A temporary filter dam installed across drainageways or in conjunction with a temporary sediment trap.
Re	RETAINING WALL		Re	A wall installed to stabilize cut and fill slopes where maximum permissible slopes are not attainable. Each situation will require special design.
Ri	RETRO INLET		Ri	A fabric or structure placed in front of a permanent stormwater detention pond outlet structure to serve as a temporary sediment filter.
Sd1	SEDIMENT BARRIER		Sd1	A barrier to prevent sediment from leaving the construction site. It may be sandbags, bales of straw or hay bound, logs, or silt fence.
Sd2	INLET SEDIMENT TRAP		Sd2	A temporary protective device formed at or around an inlet to a storm drain to trap sediment.
Sd3	EMPORARY SEDIMENT BASIN		Sd3	A basin created by excavation or a dam across a waterway. The surface water runoff is temporarily stored allowing the bulk of the sediment to drop out.
Sd4	EMPORARY SEDIMENT TRAP		Sd4	A small temporary pond that detains a disturbed area so that sediment can settle out. The principle feature distinguishing a temporary sediment trap from a temporary sediment basin is the lack of a pipe or riser.
Sk	FLOATING SURFACE SKIMMER		Sk	A buoyant device that releases/drains water from the surface of sediment ponds, traps, or basins at a controlled rate of flow.
Sp(d)	SEEP BERM		Sp(d)	A linear control device constructed of compacted soil placed on the downstream slope of a dam to enhance stabilization and infiltration of runoff, while directing multiple sedimentation chambers with the employment of intermediate dikes.

STRUCTURAL PRACTICES

CODE	PRACTICE	DETAIL	MAP SYMBOL	DESCRIPTION
Sr	EMPORARY STREAM CROSSING		Sr	A temporary bridge or culvert-type structure protecting a stream or watercourse from damage by crossing construction equipment.
St	STORMWATER OUTLET PROTECTION		St	A paved or short section of riprap channel at the outlet of a storm drain system preventing erosion from the concentrated runoff.
Su	SURFACE ROUGHENING		Su	A rough soil surface with horizontal depressions on a contour or slopes left in a roughened condition after grading.
Tc	TURBIDITY CURTAIN		Tc	A floating or stalked barrier installed within the water (it may also be referred to as a floating boom, silt barrier, or silt curtain).
Tp	TOPSOILING		Tp	The practice of stripping off the more fertile soil, storing it, then spreading it over the disturbed area after completion of construction activities.
Tr	TREE PROTECTION		Tr	To protect desirable trees from injury during construction activity.
Wt	WATERWAY OR WATERCOURSE CROSSING CHANNEL		Wt	Paved or vegetative water outlets for diversions, terraces, banks, dikes or similar structures.

VEGETATIVE PRACTICES

CODE	PRACTICE	DETAIL	MAP SYMBOL	DESCRIPTION
Bf	BUFFER ZONE		CBZ	Strip of undisturbed original vegetation, enhanced or restored existing vegetation or the reestablishment of vegetation surrounding an area of disturbance or bordering streams.
Cs	COASTAL DUNE STABILIZATION (WITH VEGETATION)		Cs	Providing vegetation protection for disturbed areas of coastal dunes. This may not have a sodding, mulching, erosion to produce an erosion retarding growth.
Ds1	DISTURBED AREA STABILIZATION (MULCHING ONLY)		Ds1	Establishing temporary vegetative cover with mulch only on disturbed areas.
Ds2	DISTURBED AREA STABILIZATION (WITH TEMP. SEEDING)		Ds2	Establishing temporary vegetative cover with fast growing seedings on disturbed areas.
Ds3	DISTURBED AREA STABILIZATION (WITH PERM. SEEDING)		Ds3	Establishing a permanent vegetative cover on disturbed areas, trees, vines, grasses, or legumes on disturbed areas.
Ds4	DISTURBED AREA STABILIZATION (SODDING)		Ds4	A permanent vegetative cover using sods on highly available or critically eroded lands.
Du	DUST CONTROL ON DISTURBED AREAS		Du	Controlling surface and air movement of dust on construction sites, roadways and similar sites.
Fl-Co	FLOCULANTS AND COAGULANTS		Fl-Co	Substance formulated to assist in the solids/liquid separation of suspended particles in solution.
Sb	STOCKPILE STABILIZATION (CONTAINMENT)		Sb	The use of readily available native plant materials to maintain soil entrance streambanks, or to prevent, or restore and repair small streambank erosion problems.
Ss	SLOPE STABILIZATION		Ss	A protective covering used to prevent erosion and establish temporary or permanent vegetation on steep slopes, shore lines, or channels.
Tac	TACKIFIERS AND BINDERS		Tac	Substance used to anchor straw or hay mulch by creating the organic material to bind together.

(22) FINAL STABILIZATION CERTIFICATION
I certify under penalty of law that either:
(a) the portion of the site as indicated above has met final stabilization, all storm water discharges associated with construction activity authorized by this permit have ceased, the site is in compliance with this permit and all temporary BMPs have been removed.
(b) I am no longer an Owner or Operator at the construction site and a new Owner or Operator has assumed operational control of the permitted construction site where I previously had ownership or operational control. I understand that by signing this Final Stabilization Certification which has been incorporated into the Primary Permittee's Plan, that I am no longer authorized to discharge storm water associated with construction activity by the general permit, and that discharging pollutants in storm water associated with construction activity to waters of Georgia is unlawful under the Georgia Water Quality Control Act and the Clean Water Act where the discharge is not authorized by a NPDES permit.

(1) EROSION, SEDIMENTATION & POLLUTION CONTROL PLAN CHECKLIST
COMMON DEVELOPMENT CONSTRUCTION PROJECTS (Primary and Tertiary Permittees) GAR100003
SWCD: GWINNETT COUNTY SWCD
Project Name: BROOKHAVEN ROW — Address: ADAMS STREET
Local Issuing Authority: CITY OF BUFORD — Date on Plans: 10/16/2024
Name & Email of person filling out checklist: Taylor Anderson ta@bluelandworks.com

Page #	Plan Included Y/N		TO BE SHOWN ON ES&PC PLAN
E-001	Y	1	The applicable Erosion, Sedimentation and Pollution Control Plan Checklist established by the Commission as of January 1 of the year in which the land-disturbing activity was permitted.
			The completed Checklist must be submitted with the ES&PC Plan or the Plan will not be reviewed. **Permit IV.D.1. pg 28**
E-001	Y	2	Level II certification number issued by the Commission, signature and seal of the certified design professional.
			(Signature, seal and Level II number must be on each sheet pertaining to ES&PC Plan or the Plan will not be reviewed)
N/A	N/A	3	Limit of disturbance shall be less than 50 acres at any one time without prior written authorization from the GAEPD District Office. If GAEPD approves the request to disturb 50 acres or more at any one time, the Plan must include the GAEPD approval letter and completed Appendix 1 of this checklist with at least 4 of the chosen BMPs. *
			(A copy of the written approval by GAEPD must be attached to the Plan for the Plan to be reviewed.)
E-001	Y	4	The name and phone number of the 24-hour contact responsible for erosion, sedimentation and pollution controls.
E-001	Y	5	Provide the name, address, email address, and phone number of the Primary Permittee or Tertiary Permittee.
E-001	Y	6	Note total and disturbed acreage of the project or phase under construction.
E-001	Y	7	Provide the GPS location of the construction exit for the site. Give the Latitude and Longitude in decimal degrees.
E-001	Y	8	Initial date of the Plan and the dates of any revisions made to the Plan including the entity who requested the revisions.
E-001	Y	9	Descriptions of the nature of construction activity and existing site conditions.
E-001	Y	10	Provide vicinity map showing site's relation to surrounding areas. Include designation of specific phase, if necessary.
E-001	Y	11	Identify the project receiving waters and describe all sensitive adjacent areas including streams, lakes, residential areas, wetlands, marshlands, etc. which may be affected.
E-001	Y	12	Design professional's certification statement and signature that the site was visited prior to development of the ES&PC Plan as stated on **Part IV page 22** of the permit.
E-001	Y	13	Design professional's certification statement and signature that the Permittee's ES&PC Plan provides for an appropriate and comprehensive system of BMPs and sampling to meet permit requirements as stated on **Part IV page 22** of the permit.
E-001	Y	14	Clearly note the statement that "The design professional who prepared the ES&PC Plan is to inspect and certify the installation of the initial sediment storage requirements and perimeter control BMPs within 7 days after installation." *
E-001	Y	15	Clearly note the statement that "Non-exempt activities shall not be conducted within the 25 or 50-foot undisturbed streambuffers as measured from the point of the wrested vegetation or within 25-feet of the coastal marshland buffer as measured from the Jurisdictional Determination Line without first acquiring the necessary variances and permits."
E-001	Y	16	Provide a description of any buffer encroachments and indicate whether a buffer variance is required.
E-001	Y	17	Clearly note the statement that "Amendments/revisions to the ES&PC Plan which have a significant effect on BMPs with a hydraulic component must be certified by the design professional." *
E-001	Y	18	Clearly note the statement that "Waste materials shall not be discharged to waters of the State, except as authorized by a Section 404 permit." *
E-001	Y	19	Clearly note statement that "The escape of sediment from the site shall be prevented by the installation of erosion and sediment control measures and practices prior to land disturbing activities."
E-001	Y	20	Clearly note statement that "Erosion control measures will be maintained at all times. If full implementation of the approved Plan does not provide for effective erosion control, additional erosion and sediment control measures shall be implemented to control or treat the sediment source."
E-001	Y	21	Clearly note the statement "Any disturbed area left exposed for a period greater than 14 days shall be stabilized with mulch or temporary seeding."
E-001	Y	22-A	Prior to a Secondary Permittee conducting any construction activity, the applicable portion of the Primary Permittee's ES&PC Plan is to be provided. The Plan shall include a section for each Secondary Permittee to sign the Secondary Permittee Certification Statement and include the information required by **Part II.B.2.** *
E-001	Y	22-B	For all Secondary Permittees, a Final Stabilization Certification must be signed when final stabilization has been achieved, stormwater discharge for activities has ceased, and temporary BMPs have been removed for that portion of the site. The Plan shall include a section for each Secondary Permittee to sign the Final Stabilization Certification and include the information required by **Part VI.D.** *
E-003 E-101	Y	23	Any construction activity which discharges storm water into a Biota Impaired Stream Segment, or within 1 linear mile upstream of and within the same watershed as any portion of a Biota Impaired Stream Segment, must comply with **Part III.C.** of the permit. Include the applicable section of the Appendix 1 of this checklist with at least 4 of the chosen BMPs that will be used for those areas of the site which discharge to the Impaired Stream Segment. *
N/A	N/A	24	If a TMDL Implementation Plan for sediment has been finalized for the Biota Impaired Stream Segment (identified in Item 23 above) at least six months prior to submittal of NOI, the ES&PC Plan must address any site-specific conditions or requirements included in the TMDL Implementation Plan. *
E-001	Y	25	BMPs for concrete washouts of trucks, concrete mixer chutes, hoppers and the rear of the vehicles. Include statement that washout of the drum at the construction site is prohibited.
E-001	Y	26	Provide BMPs for the remediation of all petroleum spills and leaks.
E-001	Y	27	Description of practices to provide cover for building materials and building products on site. *
E-001	Y	28	Description of the measures that will be installed during the construction process to control pollutants in storm water that will occur after construction operations have been completed.
E-001	Y	29	Description of the practices that will be used to reduce the pollutants in storm water discharges.
E-001	Y	30	Description and chart or timeline of the intended sequence of major activities which disturb soils for the major portions of the site (i.e., initial perimeter and sediment storage BMPs, clearing and grubbing activities, excavation activities, utility activities, grading, infrastructure, temporary and final stabilization). *
E-002	Y	31	Provide complete requirements of Inspections and record keeping by the Primary or Tertiary Permittee.
E-002	Y	32	Provide complete requirements of Sampling Frequency and Reporting of sampling results. *
E-003	Y	33	Provide complete details for Retention of Records as per **Part IV.F.** of the permit.
E-003	Y	34	Description of analytical methods to be used to collect and analyze the samples from each location. *
E-002	Y	35	Appendix B rationale for NTU values at all outfall sampling points where applicable. *
E-002	Y	36	Delineate all sampling locations on all phases of the Plan, and perennial and intermittent streams and other water bodies into which storm water is discharged. *
E-001	Y	37	A description of appropriate controls and measures that will be implemented at the construction site including: (1) initial sediment storage requirements

PART III.D MANAGEMENT PRACTICES AND PERMIT VIOLATIONS

1. Best management practices, as set forth in this permit, are required for all construction activities, and must be implemented in accordance with the design specifications contained in the "Manual for Erosion and Sediment Control in Georgia" (Manual) published by the State Soil and Water Conservation Commission as of January 1 of the year in which the land-disturbing activity was permitted to prevent or reduce the pollution of waters of Georgia. Proper design, installation, and maintenance of best management practices shall constitute a complete defense to any action by the Director or to any other allegation of noncompliance with Part III.D.3. and Part III.D.4.

2. Except as required to install the initial sediment storage requirements and perimeter control BMPs as described in Part IV.D.3., the initial sediment storage requirements and perimeter control BMPs must be installed and implemented prior to conducting any other construction activities (e.g., clearing, grubbing and grading) within the construction site or when applicable, within phased sub-parts or segments of the construction site. Failure to comply shall constitute a violation of this permit for each day on which construction activities occur. The design professional who prepared the Plan must inspect the initial sediment storage requirements and perimeter control BMPs in accordance with Part IV.A.5. within seven (7) days after installation.

3. Failure to properly design, install, or maintain best management practices shall constitute a violation of this permit for each day on which such failure occurs. BMP maintenance as a result of the permittee's routine inspections shall not be considered a violation for the purposes of this paragraph. If during the course of the permittee's routine inspection BMP failures are observed which have resulted in sediment deposition into Waters of the State, the permittee shall correct the BMP failures and shall submit a summary of the violations to EPD in accordance with Part V.A.2. of this permit.

4. A discharge of storm water runoff from disturbed areas where best management practices have not been properly designed, installed, and maintained shall constitute a separate violation for each day on which such discharge results in the turbidity of receiving water(s) being increased by more than ten (10) nephelometric turbidity units for waters classified as trout streams or more than twenty-five (25) nephelometric turbidity units for waters supporting warm water fisheries, regardless of a permittee's certification under Part II.B.1.j. and Part II.B.3.j.

5. When the permittee has elected to sample outfall(s), the discharge of storm water runoff from disturbed areas where best management practices have not been properly designed, installed, and maintained shall constitute a separate violation for each day on which such condition results in the turbidity of the discharge exceeding the value selected from Appendix B applicable to the construction site. As set forth therein, the nephelometric turbidity unit (NTU) value shall be selected from Appendix B based upon the size of the construction site, the surface water drainage area and whether the receiving water(s) supports warm water fisheries or is a trout stream as indicated in the Rules and Regulations for Water Quality Control, Chapter 391-3-6 at www.gaepd.org.

PART IV.D.4. INSPECTIONS (31)

a. Primary Permittee.

(1). Each day when any type of construction activity has taken place at a primary permittee's site, certified personnel provided by the primary permittee shall inspect: (a) all areas at the primary permittee's site where petroleum products are stored, used, or handled for spills and leaks from vehicles and equipment and (b) all locations at the primary permittee's site where vehicles enter or exit the site for evidence of off-site sediment tracking. These inspections must be conducted until a Notice of Termination is submitted.

(2). Measure rainfall once every 24 hours except any non-working Saturday, non-working Sunday and non-working Federal holiday until a Notice of Termination is submitted. Measurement of rainfall may be suspended if all areas of the site have undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region.

(3). Certified personnel (provided by the primary permittee) shall inspect the following at least once every seven (7) calendar days and within 24 hours of the end of a storm that is 0.5 inches rainfall or greater (unless such storm ends after 5:00 PM on any Friday or on any non-working Saturday, non-working Sunday or any non-working Federal holiday in which case the inspection shall be completed by the end of the next business day and/or working day, whichever occurs first): (a) disturbed areas of the primary permittee's construction site ; (b) areas used by the primary permittee for storage of materials that are exposed to precipitation ; and (c) structural control measures. Erosion and sediment control measures identified in the Plan applicable to the primary permittee's site shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving water(s). For areas of a site that have undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region, the permittee must comply with Part IV.D.4.a.(4).. These inspections must be conducted until a Notice of Termination is submitted.

(4). Certified personnel (provided by the primary permittee) shall inspect at least once per month during the term of this permit (i.e., until a Notice of Termination is submitted to EPD) the areas of the site that have undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region. These areas shall be inspected for evidence of, or the potential for, pollutants entering the drainage system and the receiving water(s). Erosion and sediment control measures identified in the Plan shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving water(s).

(5). Based on the results of each inspection, the site description and the pollution prevention and control measures identified in the Erosion, Sedimentation and Pollution Control Plan, the Plan shall be revised as appropriate not later than seven (7) calendar days following each inspection. Implementation of such changes shall be made as soon as practical but in no case later than seven (7) calendar days following each inspection. The primary permittee must amend the Plan in accordance with Part IV.D.4.b.(5). when a secondary permittee notifies the primary permittee of any Plan deficiencies.

(6). A report of each inspection that includes the name(s) of certified personnel making each inspection, the date(s) of each inspection, construction phase (i.e., initial, intermediate or final), major observations relating to the implementation of the Erosion, Sedimentation and Pollution Control Plan, and actions taken in accordance with Part IV.D.4.a.(5).. of the permit shall be made and retained at the site or be readily available at a designated alternate location until the entire site or that portion of a construction project that has been phased has undergone final stabilization and a Notice of Termination is submitted to EPD. Such reports shall be readily available by end of the second business day and/or working day and shall identify all incidents of best management practices that have not been properly installed and/or maintained as described in the Plan. Where the report does not identify an incident, the inspection report shall contain a statement that the best management practices are in compliance with the Erosion, Sedimentation and Pollution Control Plan. The report shall be signed in accordance with Part V.G.2. of this permit.

b. Secondary Permittee.

(1). Each day when any type of construction activity has taken place at a secondary permittee's site, certified personnel provided by the secondary permittee shall inspect: (a) all areas used by the secondary permittee where petroleum products are stored, used, or handled for spills and leaks from vehicles and equipment; and (b) all locations at the secondary permittee site where that permittee's vehicles enter or exit the site for evidence of off-site sediment tracking. These inspections must be conducted until a Notice of Termination is submitted. This paragraph is not applicable to utility companies and utility contractors if they are secondary permittees.

(2). Certified personnel (provided by the utility companies and utility contractors if they are secondary permittees) shall inspect the following each day any type of construction activity has taken place at the construction site: (a) areas of the construction site disturbed by the utility companies and utility contractors that have not undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region; (b) areas used by the utility companies and utility contractors for storage of materials that are exposed to precipitation that have not undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region or established a crop of annual vegetation and a seeding of target perennials appropriate for the region; and (c) structural control measures. Erosion and sediment control measures identified in the Plan applicable to the utility companies and utility contractors' construction activities shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving water(s). This paragraph is not applicable to utility companies and utility contractors when they are secondary permittees performing service line installations or when conducting repairs on existing line installations.

(3). Certified personnel (provided by the secondary permittee) shall inspect the following at least once every seven calendar days and within 24 hours of the end of a storm that is 0.5 inches rainfall or greater (unless such storm ends after 5:00 PM on any Friday or on any non-working Saturday, non-working Sunday or any non-working Federal holiday in which case the inspection shall be completed by the end of the next business day and/or working day, whichever occurs first): (a) disturbed areas of the secondary permittee's construction site ; (b) areas used by the secondary permittee for storage of materials that are exposed to precipitation ; and (c) structural control measures. Erosion and sediment control measures identified in the Plan applicable to the secondary permittee's site shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving water(s). For areas of a site that have undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region, the permittee must comply with Part IV.D.4.b.(4). These inspections must be conducted until a Notice of Termination is submitted. This paragraph is not applicable to utility companies and utility contractors if they are secondary permittees.

(4). Certified personnel (provided by the secondary permittee) shall inspect at least once per month during the term of this permit (i.e., until a Notice of Termination is submitted to EPD) the areas of their sites that have undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region. These areas shall be inspected for evidence of, or the potential for, pollutants entering the drainage system and the receiving water(s). Erosion and sediment control measures identified in the Plan shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving water(s). This paragraph is not applicable to utility companies and utility contractors if they are secondary permittees.

(5). Based on the results of each inspection, the secondary permittee must notify the primary permittee within 24-hours of any suspected BMP design deficiencies. The primary permittee must evaluate whether these deficiencies exist within 48-hours of such notice, and if these deficiencies are found to exist must amend the Plan in accordance with Part IV.C. of this permit to address those deficient BMPs within seven (7) days of being notified by the secondary permittee. When the Plan is amended, the primary permittee must notify and provide a copy of the amendment to all affected secondary permittee(s) within this seven (7) day period. The secondary permittees must implement any new Plan requirements affecting their site(s) within 48-hours of notification by the primary permittee.

(6). A report of each inspection that includes the name(s) of certified personnel making each inspection, the date(s) of each inspection, construction phase (i.e., initial, intermediate or final), major observations relating to the implementation of the Erosion, Sedimentation and Pollution Control Plan, and actions taken in accordance with Part IV.D.4.b.(5). of the permit shall be made and retained at the site or be readily available at a designated alternate location until the entire site has undergone final stabilization and a Notice of Termination is submitted to EPD. Such reports shall be readily available by the end of the second business day and /or working day and shall identify all incidents of best management practices that have not been properly installed and/or maintained as described in the Plan. Where the report does not identify any incidents, the inspection report shall contain a certification that the best management practices are in compliance with the Erosion, Sedimentation and Pollution Control Plan. The report shall be signed in accordance with Part V.G.2. of this permit. This paragraph is not applicable to utility companies and utility contractors if they are secondary permittees performing only service line installations or when conducting repairs on existing line installations.

c. Tertiary Permittee.

(1). Each day when any type of construction activity has taken place at a tertiary permittee's site, certified personnel provided by the tertiary permittee shall inspect: (a) all areas used by the tertiary permittee where petroleum products are stored, used, or handled for spills and leaks from vehicles and equipment; and (b) all locations at the tertiary permittee site where that permittee's vehicles enter or exit the site for evidence of off-site sediment tracking. These inspections must be conducted until a Notice of Termination is submitted. This paragraph is not applicable to utility companies and utility contractors performing only service line installations or when conducting repairs on existing line installations.

(2).Measure rainfall once every 24 hours except any non-working Saturday, non-working Sunday and non-working Federal holiday until a Notice of Termination is submitted. Measurement of rainfall may be suspended if all areas of the site have undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region.

(3). Certified personnel (provided by the tertiary permittee) shall inspect at least the following once every seven calendar days and within 24 hours of the end of a storm that is 0.5 inches rainfall or greater (unless such storm ends after 5:00 PM on any Friday or on any non-working Saturday, non-working Sunday or any non-working Federal holiday in which case the inspection shall be completed by the end of the next business day and/or working day, whichever occurs first): (a) disturbed areas of the tertiary permittee's construction site ; (b) areas used by the tertiary permittee for storage of materials that are exposed to precipitation ; and (c) structural control measures. Erosion and sediment control measures identified in the Plan applicable to the tertiary permittee's site shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving water(s). For areas of a site that have undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region, the permittee must comply with Part IV.D.4.c.(4). These inspections must be conducted until a Notice of Termination is submitted. This paragraph is not applicable to utility companies and utility contractors performing only service line installations or when conducting repairs on existing line installations.

(4). Certified personnel (provided by the tertiary permittee) shall inspect at least once per month during the term of this permit (i.e., until a Notice of Termination is submitted to EPD) the areas of their sites that have undergone final stabilization or established a crop of annual vegetation and a seeding of target perennials appropriate for the region. These areas shall be inspected for evidence of, or the potential for, pollutants entering the drainage system and the receiving water(s). Erosion and sediment control measures identified in the Plan shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving water(s). This paragraph is not applicable to utility companies and utility contractors performing only service line installations or when conducting repairs on existing line installations.

(5). Based on the results of each inspection, the site description and the pollution prevention and control measures identified in the Erosion, Sedimentation and Pollution Control Plan, the Plan shall be revised as appropriate not later than seven (7) calendar days following each inspection. Implementation of such changes shall be made as soon as practical but in no case later than seven (7) calendar days following the inspection.

(6). A report of each inspection that includes the name(s) of certified personnel making each inspection, the date(s) of each inspection, construction phase (i.e., initial, intermediate or final), major observations relating to the implementation of the Erosion, Sedimentation and Pollution Control Plan, and actions taken in accordance with Part IV.D.4.c.(5) of the permit shall be made and retained at the site or be readily available at a designated alternate location until the entire site has undergone final stabilization and a Notice of Termination is submitted to EPD. Such reports shall be readily available by the end of the second business day and/or working day and shall identify all incidents of best management practices that have not been properly installed and/or maintained as described in the Plan. Where the report does not identify any incidents, the inspection report shall contain a certification that the best management practices are in compliance with the Erosion, Sedimentation and Pollution Control Plan. The report shall be signed in accordance with Part V.G.2. of this permit. This paragraph is not applicable to utility companies and utility contractors performing only service line installations or when conducting repairs on existing line installations.

(32) PART IV.D.6. SAMPLING REQUIREMENTS

This permit requires the monitoring of nephelometric turbidity in receiving water(s) or outfalls in accordance with this permit. This section is applicable to primary permittees with a total planned disturbance equal to or greater than one (1) acre and tertiary permittees with a total planned disturbance equal to or greater than five (5) acres. This section is not applicable to secondary permittees. The following procedures constitute EPD's guidelines for sampling turbidity.

a. Sampling Requirements shall include the following:

(1). A USGS topographic map, a topographic map or a drawing (referred to as a topographic map) that is a scale equal to or more detailed than a 1:24000 map showing the location of the site or the common development; (a) the location of all perennial and intermittent streams and other water bodies as shown on a USGS topographic map, and all other perennial and intermittent streams and other water bodies located during mandatory field verification, into which the storm water is discharged and (b) the receiving water and/or outfall sampling locations. When the permittee has chosen to use a USGS topographic map and the receiving water(s) is not shown on the USGS topographic map, the location of the receiving water(s) must be hand-drawn on the USGS topographic map from where the storm water(s) enters the receiving water(s) to the point where the receiving water(s) combines with the first blue line stream shown on the USGS topographic map;

(2). The analytical method used to collect and analyze the samples including quality control/quality assurance procedures. This narrative must include precise sampling methodology for each sampling location;

(3). When the permittee has determined that some or all outfalls will be sampled, a rationale must be included on the Plan for the NTU limit(s) selected from Appendix B. This rationale must include the size of the construction site, the calculation of the size of the surface water drainage area, and the type of receiving water(s) (i.e., trout stream or supporting warm water fisheries); and

(4). Any additional information EPD determines necessary to be part of the Plan. EPD will provide written notice to the permittee of the information necessary and the time line for submittal.

b. Sample Type. All sampling shall be collected by "grab samples" and the analysis of these samples must be conducted in accordance with methodology and test procedures established by 40 CFR Part 136 (unless other test procedures have been approved); the guidance document titled "NPDES Storm Water Sampling Guidance Document, EPA 833-B-92-001" and guidance documents that may be prepared by the EPD.

(1). Sample containers should be labeled prior to collecting the samples.

(2). Samples should be well mixed before transferring to a secondary container.

(3). Large mouth, clean and rinsed glass or plastic jars should be used for collecting samples. The jars should be cleaned thoroughly to avoid contamination.

(4). Manual, automatic or rising stage sampling may be utilized. Samples required by this permit should be analyzed immediately, but in no case later than 48 hours after collection. However, samples from automatic samplers must be collected no later than the next business day after their accumulation, unless flow through automated analysis is utilized. If automatic sampling is utilized and the automatic sampler is not activated during the qualifying event, the permittee must utilize manual sampling or rising stage sampling during the next qualifying event. Dilution of samples is not required. Samples may be analyzed using a direct reading, properly calibrated turbidimeter. Samples are not required to be cooled.

(5). Sampling and analysis of the receiving water(s) or outfalls beyond the minimum frequency stated in this permit must be reported to EPD as specified in Part IV.E.

c. Sampling Points.

(1). For construction activities the primary permittee with a total planned disturbance equal to or greater than one (1) acre and tertiary permittee with a total planned disturbance equal to or greater than five (5) acres must sample all receiving water(s), or all outfall(s), or a combination of receiving water(s) and outfall(s). Samples taken for the purpose of compliance with this permit shall be representative of the monitored activity and representative of the water quality of the receiving water(s) and/or the storm water outfalls using the following minimum guidelines:

(a). The upstream sample for each receiving water(s) must be taken immediately upstream of the confluence of the first storm water discharge from the permitted activity the discharge farthest upstream at the site) but downstream of any other storm water discharges not associated with the permitted activity. Where appropriate, several upstream samples from across the receiving water(s) may need to be taken and the arithmetic average of the turbidity of these samples used for the upstream turbidity value.

(b). The downstream sample for each receiving water(s) must be taken downstream of the confluence of the last storm water discharge from the permitted activity (i.e., the discharge farthest downstream at the site) but upstream of any other storm water discharge not associated with the permitted activity. Where appropriate, several downstream samples from across the receiving water(s) may need to be taken and the arithmetic average of the turbidity of these samples used for the downstream turbidity value.

(c). Ideally the samples should be taken from the horizontal and vertical center of the receiving water(s) or the storm water outfall channel(s).

(d). Care should be taken to avoid stirring the bottom sediments in the receiving water(s) or in the outfall storm water channel.

(e). The sampling container should be held so that the opening faces upstream.

(f). The samples should be kept free from floating debris.

(g). Permittees do not have to sample sheetflow that flows onto undisturbed natural areas or areas stabilized by the project. For purposes of this section, stabilized shall mean, for unpaved areas and areas not covered by permanent structures and areas located outside the waste disposal limits of a landfill cell that has been certified by EPD for waste disposal, 100% of the soil surface is uniformly covered in permanent vegetation with a density of 70% or greater, or landscaped according to the Plan (uniformly covered with landscaping materials in planned landscaped areas),or equivalent permanent stabilization measures as defined in the Manual (excluding a crop of annual vegetation and seeding of target crop perennials appropriate for the region).

(h). All sampling pursuant to this permit must be done in such a way (including generally accepted sampling methods, locations, timing, and frequency) as to accurately reflect whether storm water runoff from the construction site is in compliance with the standard set forth in Parts III.D.3. or III.D.4., whichever is applicable.

d. Sampling Frequency.

(1). The primary permittee with a total planned disturbance equal to or greater than one (1) acre and tertiary permittee with a total planned disturbance equal to or greater than five (5) acres must sample in accordance with the Plan at least once for each rainfall event described below. For a qualifying event, the permittee shall sample at the beginning of any storm water discharge to a monitored receiving water and/or from a monitored outfall within forty-five (45) minutes or as soon as possible. .

(2). However, where manual and automatic sampling are impossible (as defined in this permit), or are beyond the permittee's control, the permittee shall take samples as soon as possible, but in no case more than twelve (12) hours after the beginning of the storm water discharge.

(3). Sampling by the permittee shall occur for the following qualifying events:

(a). For each area of the site that discharges to a receiving water or from an outfall, the first rain event that reaches or exceeds 0.5 inch with a storm water discharge that allows for sampling during normal business hours as defined in this permit after all clearing and grubbing operations have been completed, but prior to completion of mass grading operations, in the drainage area of the location selected as the sampling location;

(b). In addition to (a) above, for each area of the site that discharges to a receiving water or from an outfall, the first rain event that reaches or exceeds 0.5 inch with a storm water discharge that occurs during normal business hours as defined in this permit either 90 days after the first sampling event or after all mass grading operations have been completed, but prior to submittal of a NOT, in the drainage area of the location selected as the sampling location, whichever comes first;

(c). At the time of sampling performed pursuant to (a) and (b) above, if BMPs in any area of the site that discharges to a receiving water or from an outfall are not properly designed, installed and maintained, corrective action shall be defined and implemented within two (2) business days, and turbidity samples shall be taken from discharges from that area of the site for each subsequent rain event that reaches or exceeds 0.5 inch during normal business hours* until the selected turbidity standard is attained, or until post-storm event inspections determine that BMPs are properly designed, installed and maintained;

(d). Where sampling pursuant to (a), (b) or (c) above is required but not possible (or not required because there was no discharge), the primary permittee, in accordance with Part IV.D.4.a.(6),, or the tertiary permittee, in accordance with Part IV.D.4.c.(6)., must include a written justification in the inspection report of why sampling was not performed. Providing this justification does not relieve the permittee of any subsequent sampling obligations under (a), (b) or (c) above; and

(e). Existing construction activities, i.e., those that are occurring on or before the effective date of this permit, that have met the sampling required by (a) above shall sample in accordance with (b). Those existing construction activities that have met the sampling required by (b) above shall not be required to conduct additional sampling other than as required by (c) above.

*Note that the Permittee may choose to meet the requirements of (a) and (b) above by collecting turbidity samples from any rain event that reaches or exceeds 0.5 inch and allows for sampling at any time of the day or week.

(32) PART IV.E. REPORTING

1. The applicable permittees are required to submit the sampling results to the EPD at the address shown in Part II.C. by the fifteenth day of the month following the reporting period. Reporting periods are months during which samples are taken in accordance with this permit. Sampling results shall be in a clearly legible format. Upon written notification, EPD may require the applicable permittee to submit the sampling results on a more frequent basis. Sampling and analysis of any storm water discharge(s) or the receiving water(s) beyond the minimum frequency stated in this permit must be reported in a similar manner to the EPD. The sampling reports must be signed in accordance with Part V.G.2. Sampling reports must be submitted to EPD until such time as a NOT is submitted in accordance with Part VI.

2. All sampling reports shall include the following information:

a. The rainfall amount, date, exact place and time of sampling or measurements;
b. The name(s) of the certified personnel who performed the sampling and measurements;
c. The date(s) analyses were performed;
d. The time(s) analyses were initiated;
e. The name(s) of the certified personnel who performed the analyses;
f. References and written procedures, when available, for the analytical techniques or methods used;
g. The results of such analyses, including the bench sheets, instrument readouts, computer disks or tapes, etc., used to determine these results;
h. Results which exceed 1000 NTU shall be reported as "exceeds 1000 NTU;" and
i. Certification statement that sampling was conducted as per the Plan.

3. All written correspondence required by this permit shall be submitted by return receipt certified mail (or similar service) to the appropriate District Office of the EPD according to the schedule in Appendix A of this permit. The applicable permittees shall retain a copy of the proof of submittal at the construction site or the proof of submittal shall be readily available at a designated location from commencement of construction until such time as a NOT is submitted in accordance with Part VI. If an electronic submittal is provided by EPD then the written correspondence may be submitted electronically; if required, a paper copy must also be submitted by return receipt certified mail or similar service.

(31) (33) PART IV.F. RETENTION OF RECORDS

1. The primary permittee shall retain the following records at the construction site or the records shall be readily available at a designated alternate location from commencement of construction until such time as a NOT is submitted in accordance with Part VI:

a. A copy of all Notices of Intent submitted to EPD;
b. A copy of the Erosion, Sedimentation and Pollution Control Plan required by this permit;
c. The design professional's report of the results of the inspection conducted in accordance with Part IV.A.5. of this permit;
d. A copy of all sampling information, results, and reports required by this permit;
e. A copy of all inspection reports generated in accordance with Part IV.D.4.a. of this permit;
f. A copy of all violation summaries and violation summary reports generated in accordance with Part III.D.2. of this permit; and
g. Daily rainfall information collected in accordance with Part IV.D.4.a.(2). of this permit.

2. Each secondary permittee shall retain the following records at the construction site or the records shall be readily available at a designated alternate location from commencement of construction until such time as a NOT is submitted in accordance with Part VI:

a. A copy of all Notices of Intent submitted to EPD;
b. A copy of the Erosion, Sedimentation and Pollution Control Plan required by this permit or the applicable portion of the Erosion, Sedimentation and Pollution Control Plan for their activities at the construction site required by this permit;
c. A copy of all inspection reports generated in accordance with Part IV.D.4.b. of this permit; and
d. A copy of all violation summaries and violation summary reports generated in accordance with Part III.D.2. of this permit.

3. Each tertiary permittee shall retain the following records at the construction site or the records shall be readily available at a designated alternate location from commencement of construction until such time as a NOT is submitted in accordance with Part VI:

a. A copy of all Notices of Intent submitted to EPD;
b. A copy of the Erosion, Sedimentation and Pollution Control Plan required by this permit;

c. The design professional's report of the results of the inspection conducted in accordance with Part IV.A.5. of this permit;
d. A copy of all sampling information, results, and reports required by this permit;
e. A copy of all inspection reports generated in accordance with Part IV.D.4.c. of this permit;
f. A copy of all violation summaries and violation summary reports generated in accordance with Part III.D.2. of this permit; and.
g. Daily rainfall information collected in accordance with Part IV.D.4.c.(2). of this permit.

4. Copies of all Notices of Intent, Notices of Termination, inspection reports, sampling reports (including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation) or other reports requested by the EPD, Erosion, Sedimentation and Pollution Control Plans, records of all data used to complete the Notice of Intent to be covered by this permit and all other records required by this permit shall be retained by the permittee who either produced or used it for a period of at least three years from the date that the NOT is submitted in accordance with Part VI of this permit. These records must be maintained at the permittee's primary place of business once the construction activity has ceased at the permitted site. This period may be extended by request of the EPD at any time upon written notification to the permittee.

(34) (35) (36) SAMPLING NARRATIVE

THERE IS ONE (1) OUTFALL SAMPLING LOCATIONS FOR THIS PROJECT.

SAMPLING POINT 1 IS LOCATED AT HEADWALL AT THE DISCHARGE POINT FOR THE STORMWATER MANAGEMENT FACILITY 'A' AND SHALL BE MONITORED THROUGHOUT CONSTRUCTION. THE FACILITY SHALL UTILIZE A SKIMMER UNTIL FINAL STABILIZATION HAS OCCURRED.

THE SITE SIZE IS 9.76 ACRES AND SURFACE WATER DRAINAGE AREA IS LESS THAT 4.99 SQ. MILES, THEREFORE, FROM APPENDIX B, THE MAXIMUM ALLOWED TURBIDITY VALUE IS 50 NTU's.

AN SS101 STORMWATER SAMPLER BY GLOBAL WATER (OR EQUIVALENT) WILL BE USED TO COLLECT AND HANDLE THE STORM WATER DISCHARGE SAMPLES PRIOR TO ANALYSIS. PART OF THIS SAMPLING PLAN INCLUDES THE SS101 STORMWATER SAMPLER USER'S MANUAL BY GLOBAL WATER (OR EQUIVALENT).

THE STORM WATER SAMPLES WILL BE ANALYZED USING THE LAMOTTE 2020 TURBIDIMETER (OR EQUIVALENT). PART OF THIS SAMPLING PLAN INCLUDES THE INSTRUCTION MANUAL FOR THE LAMOTTE 2020 TURBIDIMETER BY LAMOTTE COMPANY (OR EQUIVALENT).

EXISTING UTILITIES ARE SHOWN FOR THE CONTRACTOR'S CONVENIENCE ONLY. THE ENGINEER ASSUMES NO RESPONSIBILITY FOR THE LOCATIONS SHOWN OR FOR THE UTILITIES NOT SHOWN. IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO VERIFY THE LOCATIONS OF ALL UTILITIES WITHIN THE LIMITS OF THE WORK. ALL DAMAGE MADE TO EXISTING UTILITIES BY THE CONTRACTOR SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR. THE CONTRACTOR IS ADVISED TO NOTIFY THE UTILITIES PROTECTION CENTER AT (800) 282-7411 PRIOR TO ANY EXCAVATION.

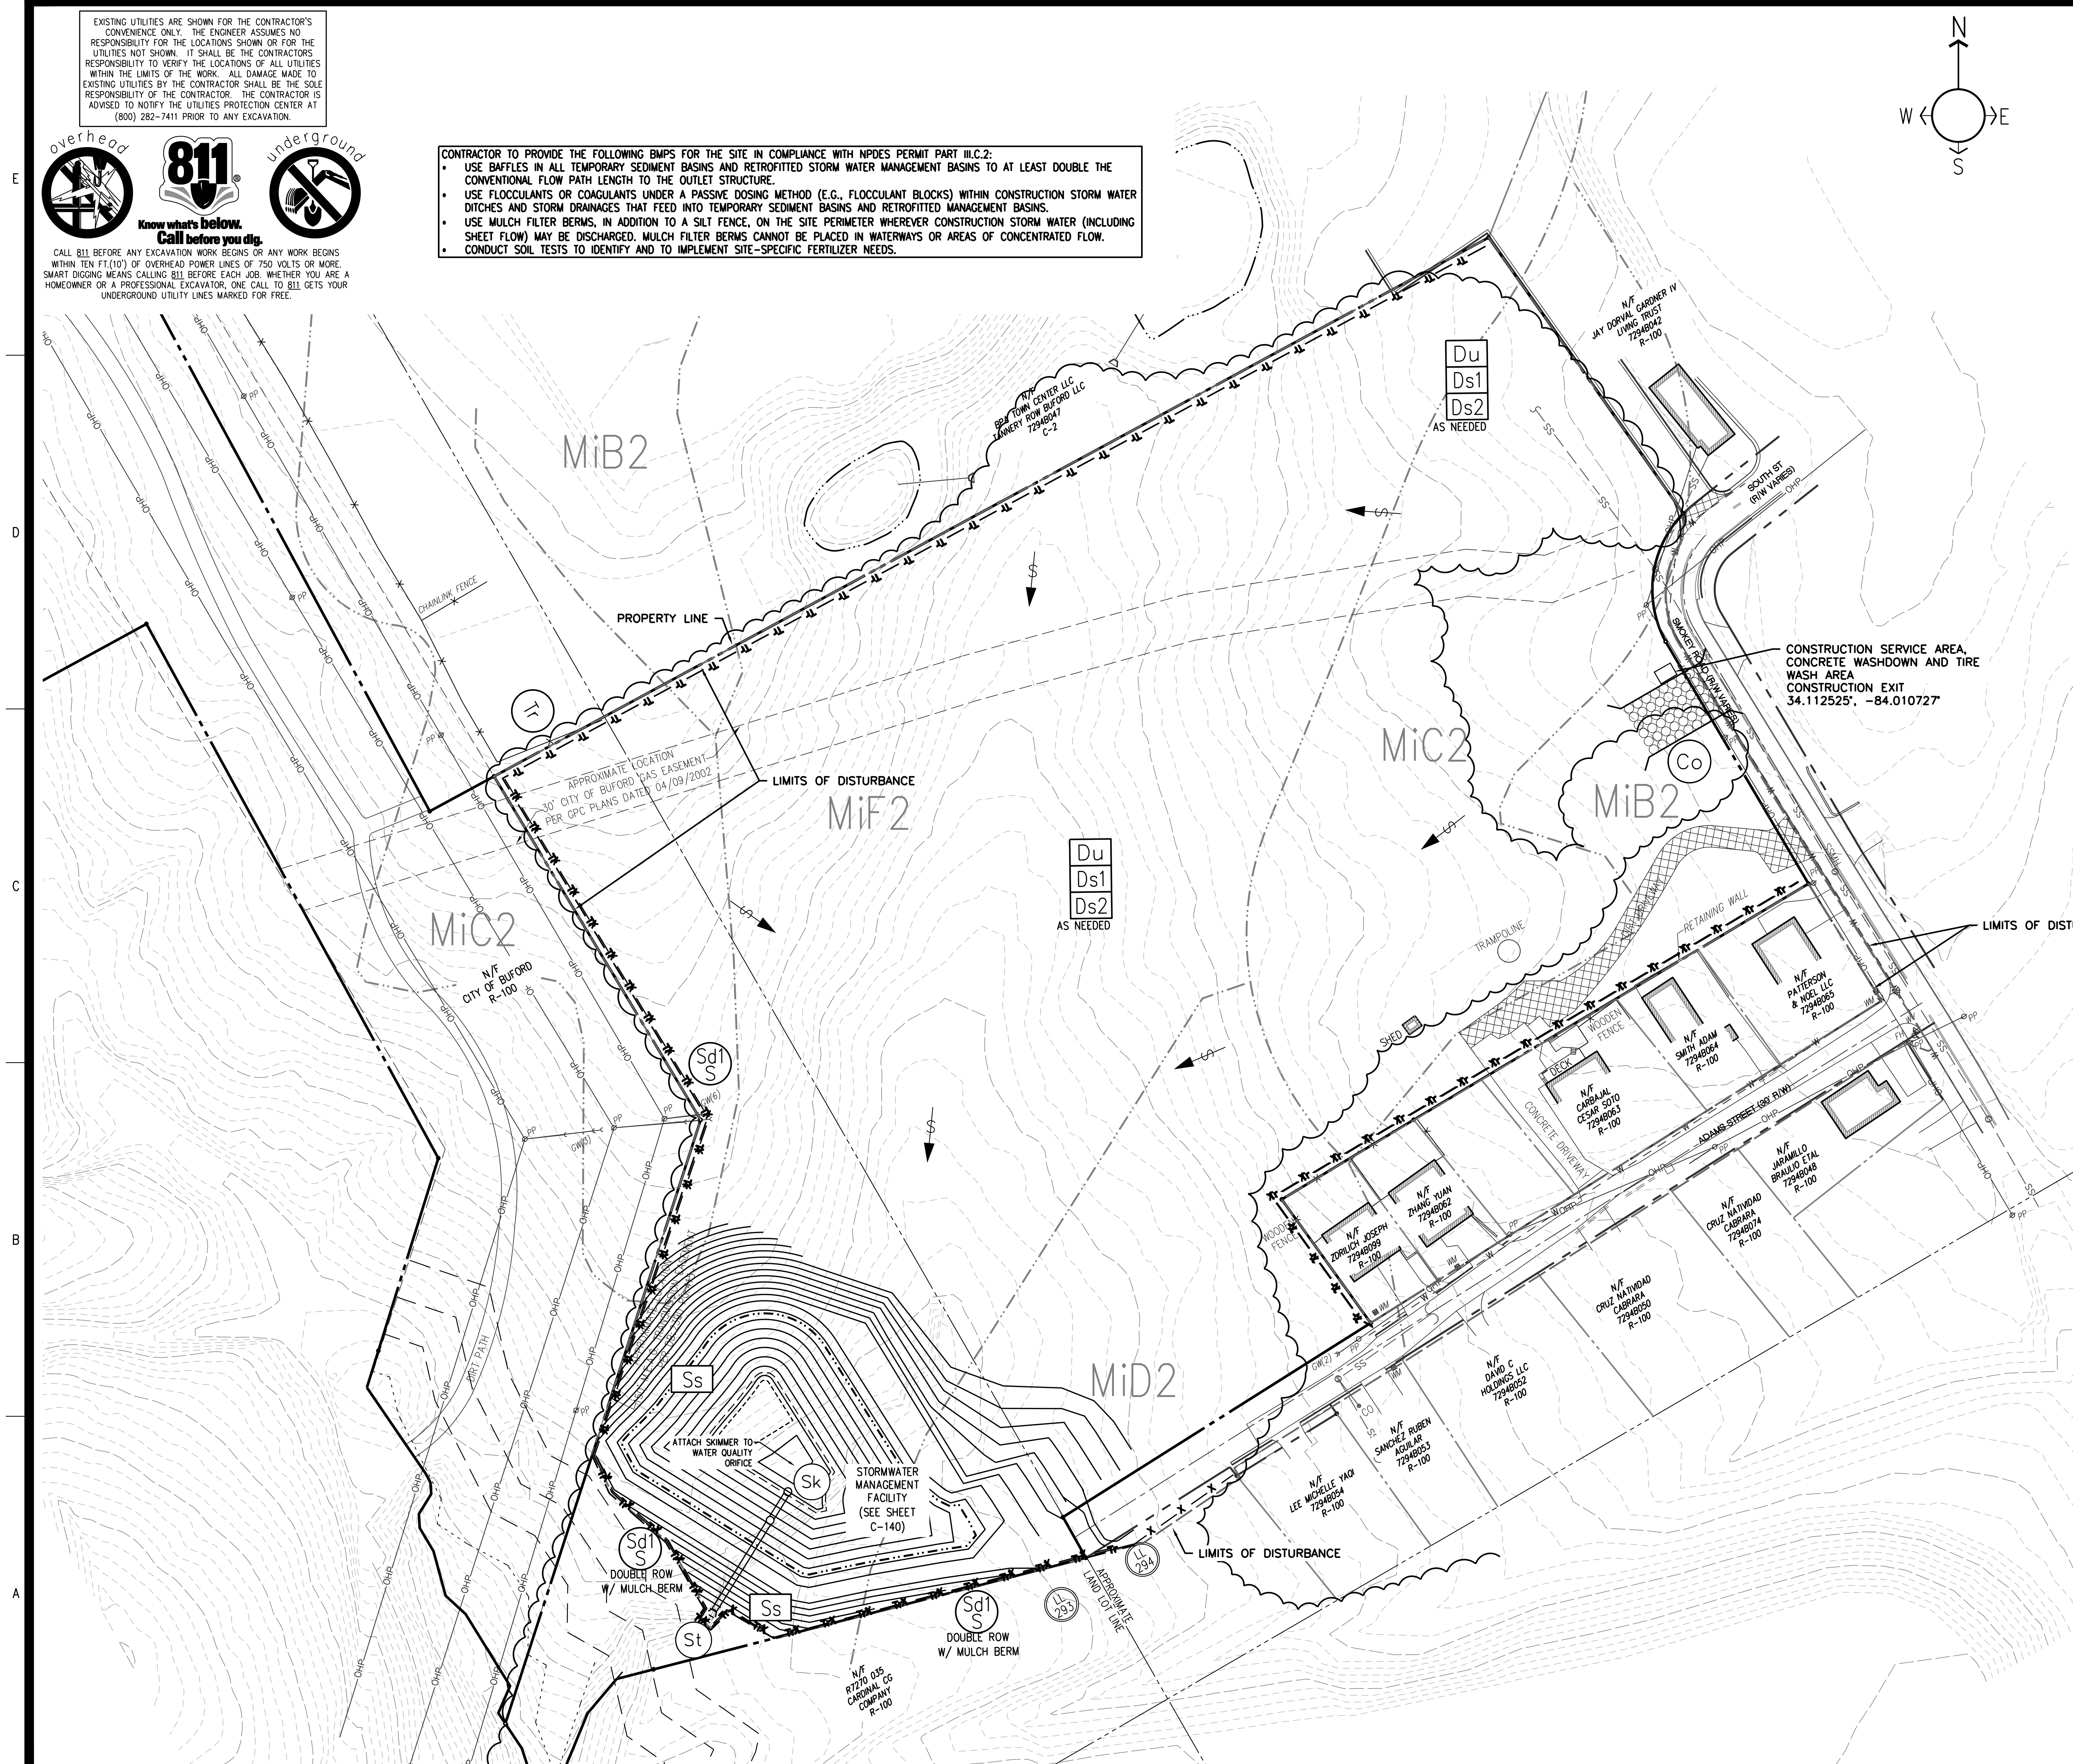
overhead 811 underground

Know what's below. Call before you dig.

CALL 811 BEFORE ANY EXCAVATION WORK BEGINS OR ANY WORK BEGINS WITHIN TEN FT.(10') OF OVERHEAD POWER LINES OF 750 VOLTS OR MORE. SMART DIGGING MEANS CALLING 811 BEFORE EACH JOB. WHETHER YOU ARE A HOMEOWNER OR A PROFESSIONAL EXCAVATOR, ONE CALL TO 811 GETS YOUR UNDERGROUND UTILITY LINES MARKED FOR FREE.

CONTRACTOR TO PROVIDE THE FOLLOWING BMPS FOR THE SITE IN COMPLIANCE WITH NPDES PERMIT PART III.C.2:

- USE BAFFLES IN ALL TEMPORARY SEDIMENT BASINS AND RETROFITTED STORM WATER MANAGEMENT BASINS TO AT LEAST DOUBLE THE CONVENTIONAL FLOW PATH LENGTH TO THE OUTLET STRUCTURE.
- USE FLOCCULANTS OR COAGULANTS UNDER A PASSIVE DOSING METHOD (E.G., FLOCCULANT BLOCKS) WITHIN CONSTRUCTION STORM WATER DITCHES AND STORM DRAINAGES THAT FEED INTO TEMPORARY SEDIMENT BASINS AND RETROFITTED MANAGEMENT BASINS.
- USE MULCH FILTER BERMS, IN ADDITION TO A SILT FENCE, ON THE SITE PERIMETER WHEREVER CONSTRUCTION STORM WATER (INCLUDING SHEET FLOW) MAY BE DISCHARGED. MULCH FILTER BERMS CANNOT BE PLACED IN WATERWAYS OR AREAS OF CONCENTRATED FLOW.
- CONDUCT SOIL TESTS TO IDENTIFY AND TO IMPLEMENT SITE-SPECIFIC FERTILIZER NEEDS.



EROSION CONTROL NOTES

1. SEDIMENT STORAGE MAINTENANCE INDICATORS MUST BE INSTALLED IN SEDIMENT STORAGE STRUCTURES, INDICATING THE 1/3 FULL VOLUME.
2. MAINTENANCE OF ALL SOIL EROSION AND SEDIMENTATION CONTROL MEASURES AND PRACTICES, WHETHER TEMPORARY OR PERMANENT, SHALL BE AT ALL TIMES THE RESPONSIBILITY OF THE PROPERTY OWNER.
3. A 50-FOOT UNDISTURBED BUFFER AND A 75-FOOT IMPERVIOUS SETBACK SHALL TO BE MAINTAINED ADJACENT TO ALL STREAMS.
4. ALL FILL SLOPES SHALL HAVE SILT FENCE PLACED AT THE SLOPE'S TOE.
5. CONCENTRATED FLOW AREAS AND ALL SLOPES STEEPER THAN 2.5:1 WITH A HEIGHT OF TEN FEET OR GREATER SHALL BE STABILIZED WITH THE APPROPRIATE EROSION CONTROL SLOPE STABILIZATION.
6. (25) CONCRETE TRUCKS SHALL NOT WASH OUT DRUM ONSITE. UTILIZE THE PROVIDED CONCRETE WASH OUT AREA TO DISCHARGE SURPLUS CONCRETE OR WASH OUT CHUTE ONLY.
7. THE SOIL EROSION AND SEDIMENT CONTROL ORDINANCE REQUIRES THAT A 25 FOOT BUFFER ADJACENT TO ALL STATE WATERS BE MAINTAINED (ARTICLE 4 SECTION 4.3 PARAGRAPH 15). AN EXCEPTION IS GRANTED TO HOME OWNERS WHO PERFORM MINOR LAND DISTURBING ACTIVITIES SUCH AS HOME LANDSCAPING, HOME GARDENS, REPAIRS AND MAINTENANCE WORK (ARTICLE 3, SECTION 3.1, PARAGRAPH 3).
8. **THE INSTALLATION OF EROSION AND SEDIMENTATION CONTROL MEASURES AND PRACTICES SHALL OCCUR PRIOR TO OR CONCURRENT WITH LAND DISTURBING ACTIVITIES.**
9. **EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE MAINTAINED AT ALL TIMES. ADDITIONAL EROSION AND SEDIMENTATION CONTROL MEASURES AND PRACTICES SHALL BE INSTALLED IF DEEMED NECESSARY BY ON SITE INSPECTION.**
10. **ANY DISTURBED AREA LEFT EXPOSED FOR A PERIOD GREATER THAN 14 DAYS SHALL BE STABILIZED WITH MULCH OR TEMPORARY SEEDING.**

SOIL SERIES CHART

1. SEDIMENT STORAGE MAINTENANCE INDICATORS MUST BE INSTALLED IN SEDIMENT STORAGE STRUCTURES, INDICATING THE 1/3 FULL VOLUME.
2. MAINTENANCE OF ALL SOIL EROSION AND SEDIMENTATION CONTROL MEASURES AND PRACTICES, WHETHER TEMPORARY OR PERMANENT, SHALL BE AT ALL TIMES THE RESPONSIBILITY OF THE PROPERTY OWNER.
3. A 50-FOOT UNDISTURBED BUFFER AND A 75-FOOT IMPERVIOUS SETBACK SHALL TO BE MAINTAINED ADJACENT TO ALL STREAMS.
4. ALL FILL SLOPES SHALL HAVE SILT FENCE PLACED AT THE SLOPE'S TOE.
5. CONCENTRATED FLOW AREAS AND ALL SLOPES STEEPER THAN 2.5:1 WITH A HEIGHT OF TEN FEET OR GREATER SHALL BE STABILIZED WITH THE APPROPRIATE EROSION CONTROL SLOPE STABILIZATION.
6. (25) CONCRETE TRUCKS SHALL NOT WASH OUT DRUM ONSITE. UTILIZE THE PROVIDED CONCRETE WASH OUT AREA TO DISCHARGE SURPLUS CONCRETE OR WASH OUT CHUTE ONLY.
7. THE SOIL EROSION AND SEDIMENT CONTROL ORDINANCE REQUIRES THAT A 25 FOOT BUFFER ADJACENT TO ALL STATE WATERS BE MAINTAINED (ARTICLE 4 SECTION 4.3 PARAGRAPH 15). AN EXCEPTION IS GRANTED TO HOME OWNERS WHO PERFORM MINOR LAND DISTURBING ACTIVITIES SUCH AS HOME LANDSCAPING, HOME GARDENS, REPAIRS AND MAINTENANCE WORK (ARTICLE 3, SECTION 3.1, PARAGRAPH 3).
8. THE INSTALLATION OF EROSION AND SEDIMENTATION CONTROL MEASURES AND PRACTICES SHALL OCCUR PRIOR TO OR CONCURRENT WITH LAND DISTURBING ACTIVITIES.
9. EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE MAINTAINED AT ALL TIMES. ADDITIONAL EROSION AND SEDIMENTATION CONTROL MEASURES AND PRACTICES SHALL BE INSTALLED IF DEEMED NECESSARY BY ON SITE INSPECTION.
10. ANY DISTURBED AREA LEFT EXPOSED FOR A PERIOD GREATER THAN 14 DAYS SHALL BE STABILIZED WITH MULCH OR TEMPORARY SEEDING.

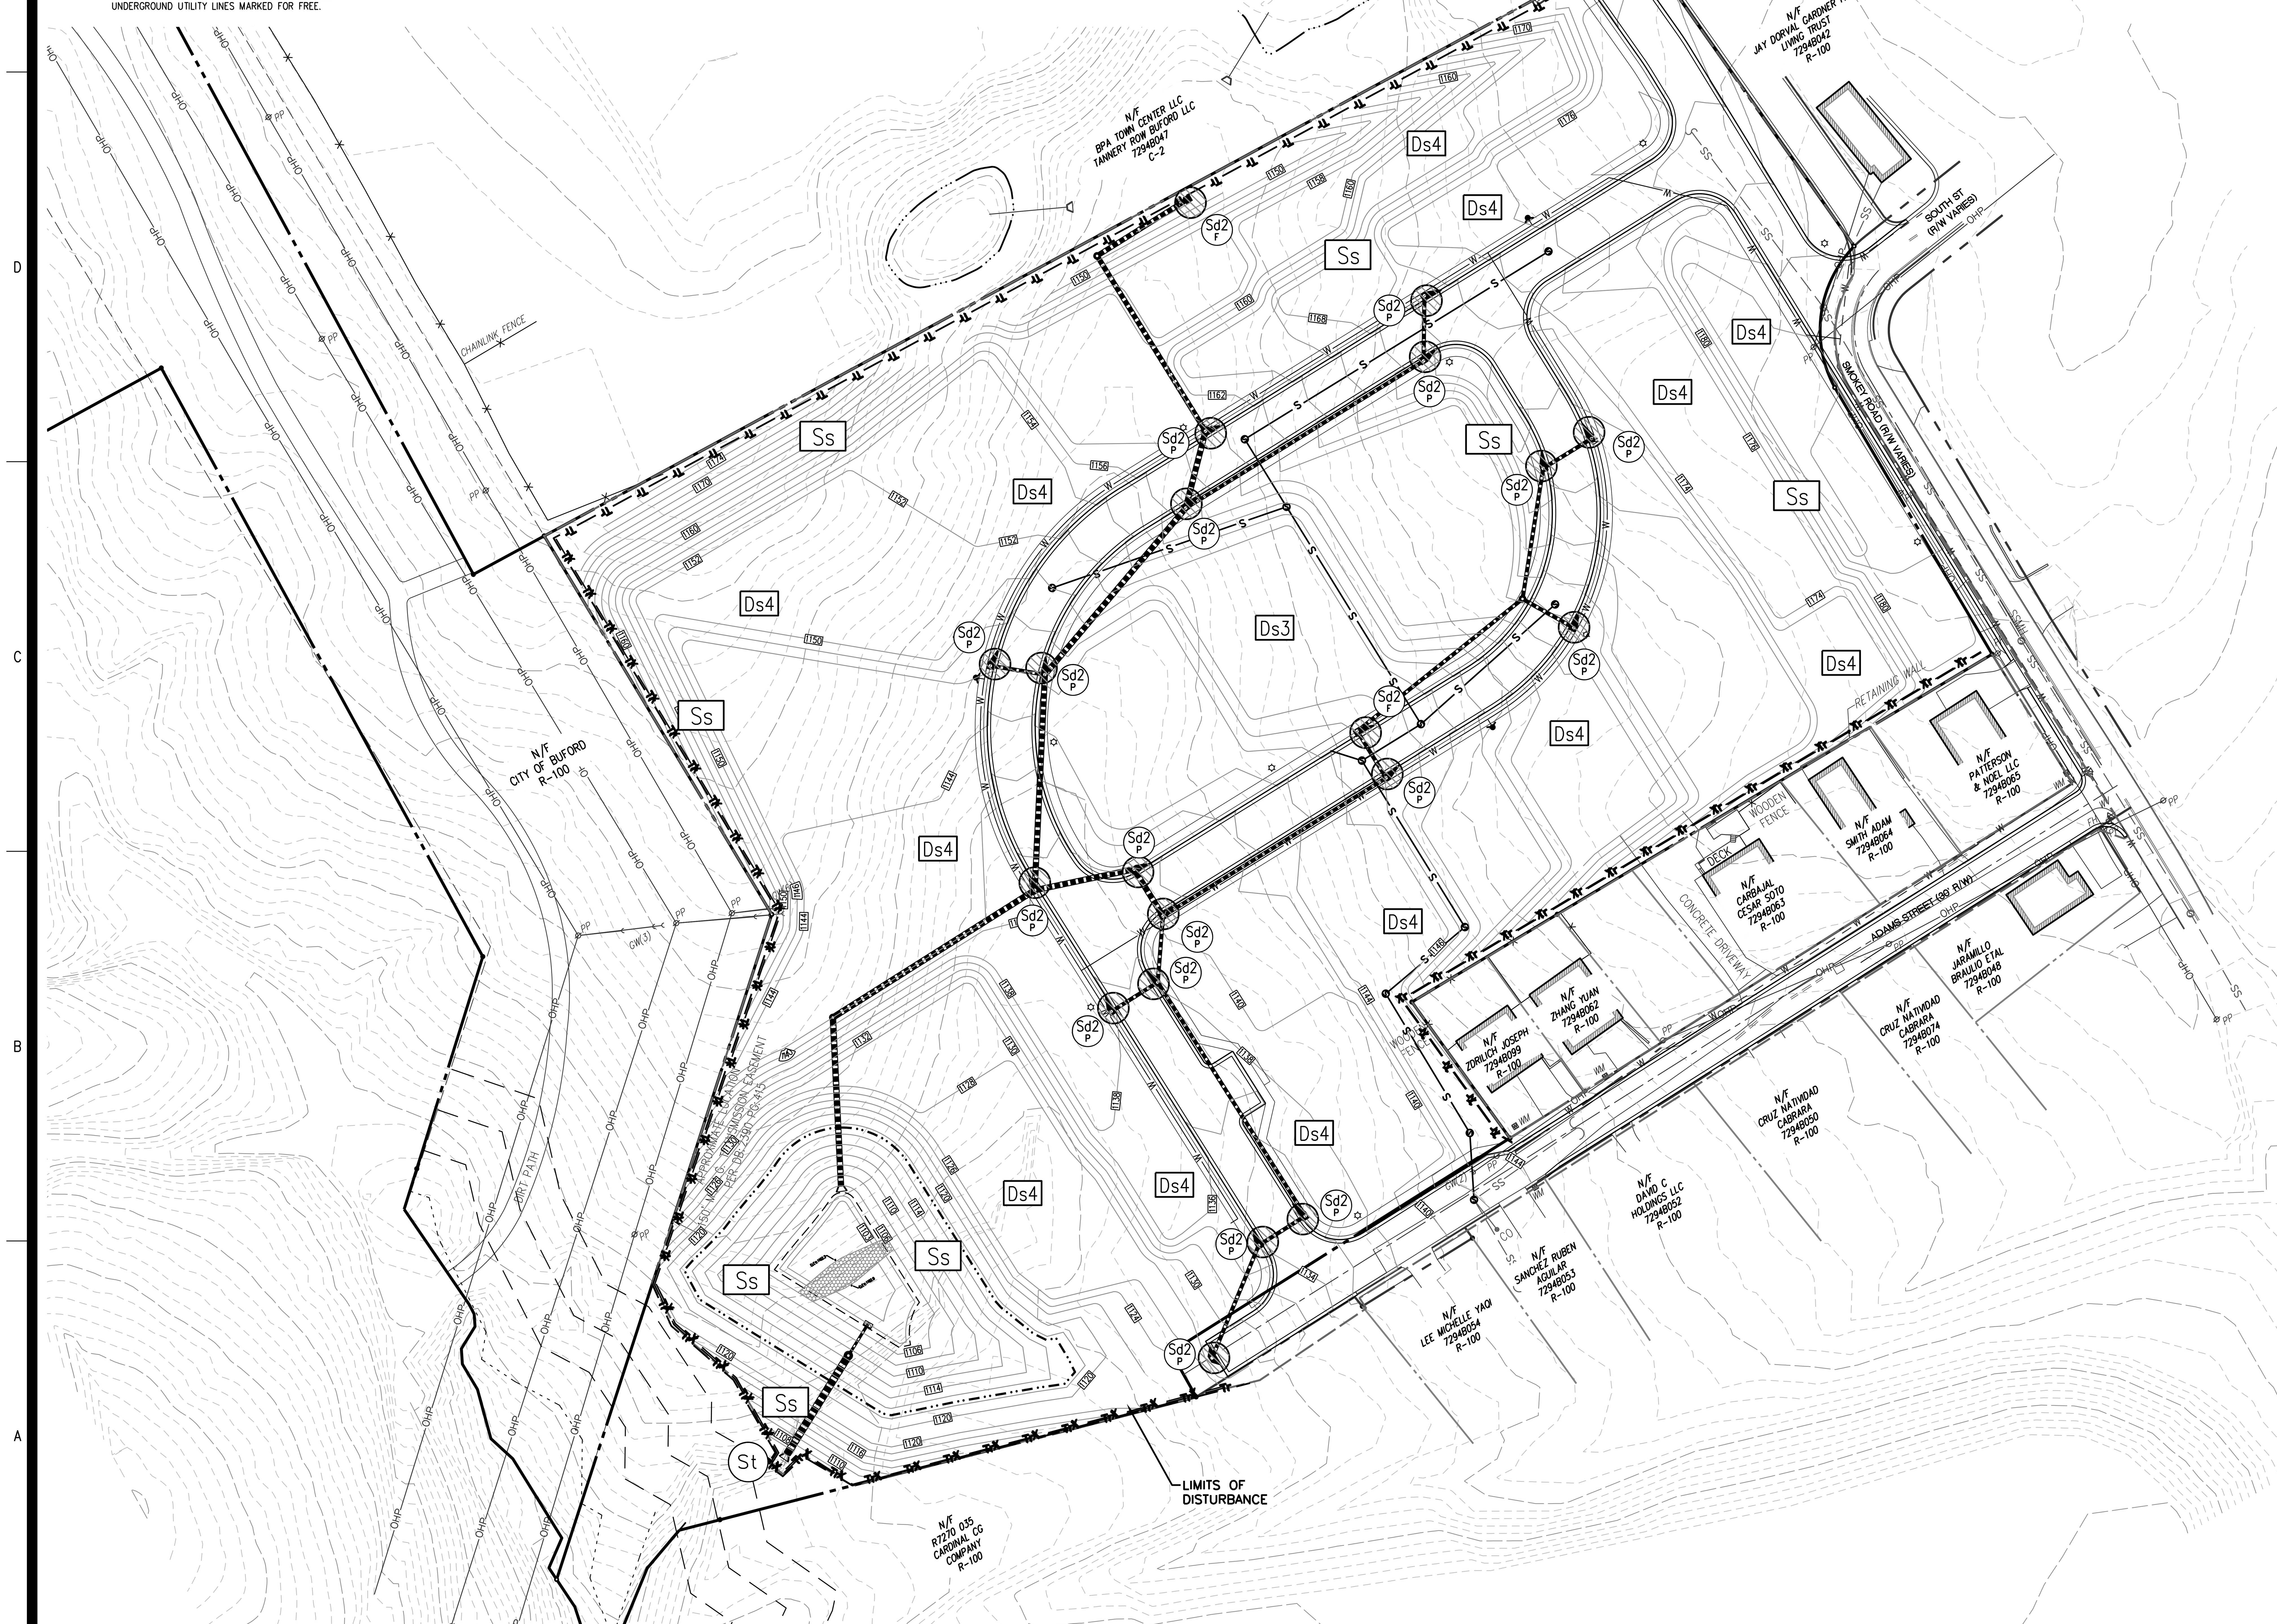
EXISTING UTILITIES ARE SHOWN FOR THE CONTRACTOR'S CONVENIENCE ONLY. THE ENGINEER ASSUMES NO RESPONSIBILITY FOR THE LOCATIONS SHOWN OR FOR THE UTILITIES NOT SHOWN. IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO VERIFY THE LOCATIONS OF ALL UTILITIES WITHIN THE LIMITS OF THE WORK. ALL DAMAGE MADE TO EXISTING UTILITIES BY THE CONTRACTOR SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR. THE CONTRACTOR IS ADVISED TO NOTIFY THE UTILITIES PROTECTION CENTER AT (800) 282-7411 PRIOR TO ANY EXCAVATION.

overhead — 811 Know what's below. Call before you dig. — underground

CALL 811 BEFORE ANY EXCAVATION WORK BEGINS OR ANY WORK BEGINS WITHIN TEN FT.(10') OF OVERHEAD POWER LINES OF 750 VOLTS OR MORE. SMART DIGGING MEANS CALLING 811 BEFORE EACH JOB. WHETHER YOU ARE A HOMEOWNER OR A PROFESSIONAL EXCAVATOR, ONE CALL TO 811 GETS YOUR UNDERGROUND UTILITY LINES MARKED FOR FREE.

CONTRACTOR TO PROVIDE THE FOLLOWING BMPS FOR THE SITE IN COMPLIANCE WITH NPDES PERMIT PART III.C.2:

- USE BAFFLES IN ALL TEMPORARY SEDIMENT BASINS AND RETROFITTED STORM WATER MANAGEMENT BASINS TO AT LEAST DOUBLE THE CONVENTIONAL FLOW PATH LENGTH TO THE OUTLET STRUCTURE.
- USE FLOCCULANTS OR COAGULANTS UNDER A PASSIVE DOSING METHOD (E.G., FLOCCULANT BLOCKS) WITHIN CONSTRUCTION STORM WATER DITCHES AND STORM DRAINAGES THAT FEED INTO TEMPORARY SEDIMENT BASINS AND RETROFITTED MANAGEMENT BASINS.
- USE MULCH FILTER BERMS, IN ADDITION TO A SILT FENCE, ON THE SITE PERIMETER WHEREVER CONSTRUCTION STORM WATER (INCLUDING SHEET FLOW) MAY BE DISCHARGED. MULCH FILTER BERMS CANNOT BE PLACED IN WATERWAYS OR AREAS OF CONCENTRATED FLOW.
- CONDUCT SOIL TESTS TO IDENTIFY AND TO IMPLEMENT SITE-SPECIFIC FERTILIZER NEEDS.



EROSION CONTROL NOTES

1. SEDIMENT STORAGE MAINTENANCE INDICATORS MUST BE INSTALLED IN SEDIMENT STORAGE STRUCTURES, INDICATING THE 1/3 FULL VOLUME.

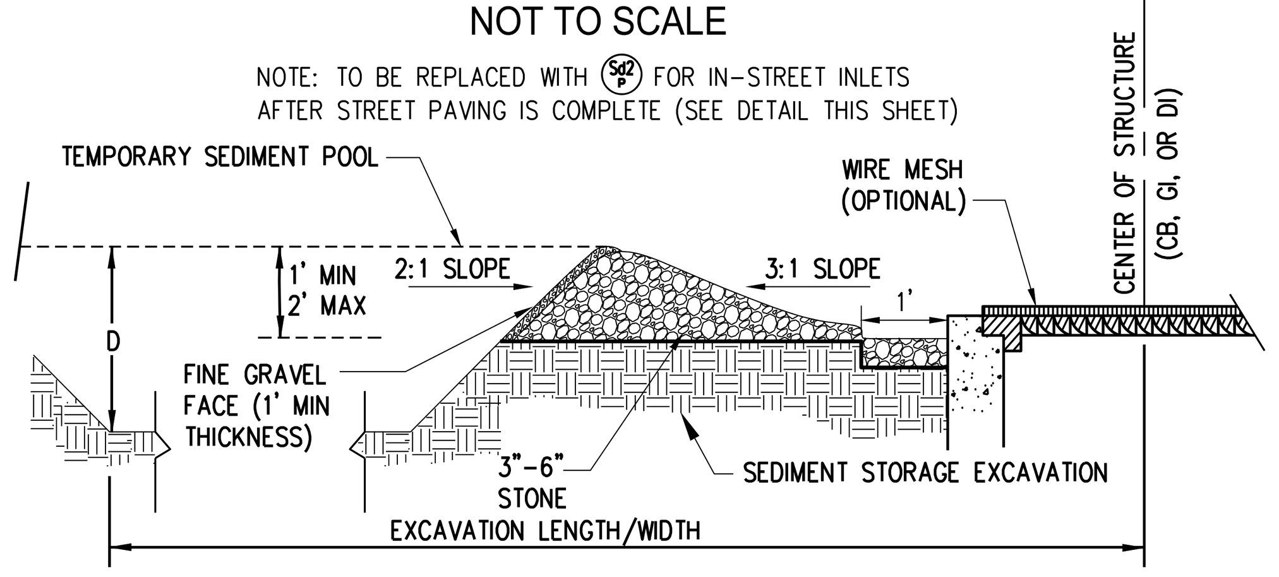
INLET SEDIMENT TRAP
GRAVEL DROP INLET PROTECTION

Sd2 G

NOT TO SCALE

NOTE: TO BE REPLACED WITH Sd2 P FOR IN-STREET INLETS AFTER STREET PAVING IS COMPLETE (SEE DETAIL THIS SHEET)



CONSTRUCTION SPECIFICATIONS

This method of inlet protection is applicable where heavy concentrated flows are expected. Stone and gravel are used to trap sediment. The slope toward the inlet shall be no steeper than 3:1. A minimum 1 foot wide level stone area shall be left between the structure and around the inlet to prevent gravel from entering the inlet. On the slope toward the inlet, stone 3 inches in diameter and larger should be used. On the slope away from the inlet, 1/2 to 3/4 inch gravel (#57 washed stone) should be used at a minimum thickness of 1 foot.

MAINTENANCE

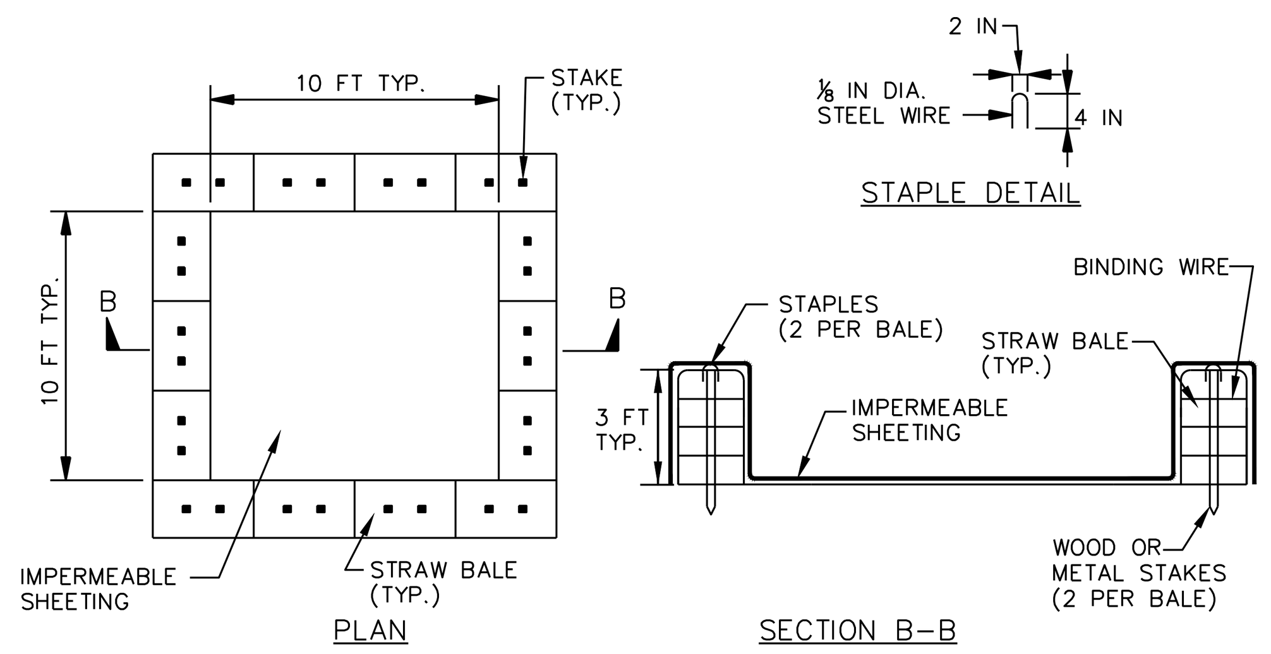
The trap shall be inspected daily and after each rain and repairs made as needed.

Sediment shall be removed when the sediment has accumulated to one-half the height of the trap. Sediment shall be removed from curb inlet protection immediately. For excavated inlet sediment traps, sediment shall be removed when one-half of the sediment storage capacity has been lost to sediment accumulation. Sod inlet protection shall be maintained as specified in Ds4-Disturbed Area Stabilization (with sodding).

Sediment shall not be washed into the inlet. It shall be removed from the sediment trap and disposed of and stabilized so that it will not enter the inlet, again.

When the contributing drainage area has been permanently stabilized, all materials and any sediment shall be removed, and either salvaged or disposed of properly. The disturbed area shall be brought to proper grade, then smoothed and compacted. Appropriately stabilize all disturbed areas around the inlet.

CONCRETE WASHDOWN AREA



NOTE: CAN BE TWO STACKED BALES OR PARTIALLY EXCAVATED TO REACH 3 FT DEPTH

WASHOUT STRUCTURE WITH STRAW BALES

CONSTRUCTION SPECIFICATIONS

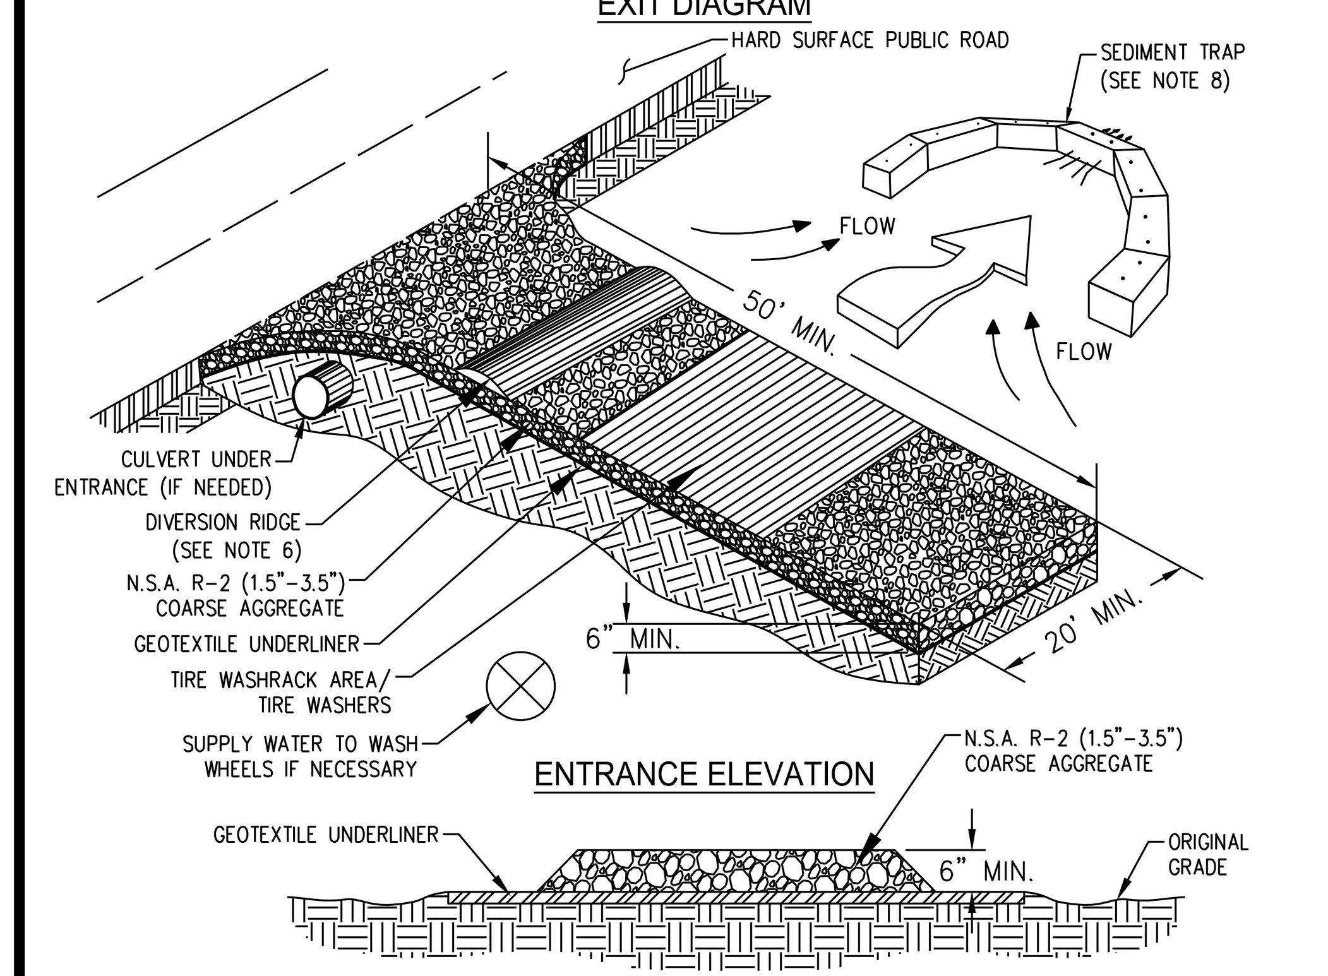
1. LOCATE WASHOUT STRUCTURE A MINIMUM OF 50 FEET AWAY FROM OPEN CHANNELS, STORM DRAIN INLETS, SENSITIVE AREAS, WETLANDS, BUFFERS AND WATER COURSES AND AWAY FROM CONSTRUCTION TRAFFIC.
2. SIZE WASHOUT STRUCTURE FOR VOLUME NECESSARY TO CONTAIN WASH WATER AND SOLIDS AND MAINTAIN AT LEAST 4 INCHES OF FREEBOARD. TYPICAL DIMENSIONS ARE 10 FEET X 10 FEET X 3 FEET DEEP.
3. PREPARE SOIL BASE FREE OF ROCKS OR OTHER DEBRIS THAT MAY CAUSE TEARS OR HOLES IN THE LINER. FOR LINER, USE 10 MIL OR THICKER UV RESISTANT, IMPERMEABLE SHEETING, FREE OF HOLES AND TEARS OR OTHER DEFECTS THAT COMPROMISE IMPERMEABILITY OF THE MATERIAL.
4. PROVIDE A SIGN FOR THE WASHOUT IN CLOSE PROXIMITY TO THE FACILITY.
5. KEEP CONCRETE WASHOUT STRUCTURE WATER TIGHT. REPLACE IMPERMEABLE LINER IF DAMAGED (E.G., RIPPED OR PUNCTURED). EMPTY OR REPLACE WASHOUT STRUCTURE THAT IS 75 PERCENT FULL, AND DISPOSE OF ACCUMULATED MATERIAL PROPERLY. DO NOT REUSE PLASTIC LINER. WET-VACUUM STORED LIQUIDS THAT HAVE NOT EVAPORATED AND DISPOSE OF IN AN APPROVED MANNER. PRIOR TO FORECASTED RAINSTORMS, REMOVE LIQUIDS OR COVER STRUCTURE TO PREVENT OVERFLOWS. REMOVE HARDENED SOLIDS, WHOLE OR BROKEN UP, FOR DISPOSAL OR RECYCLING. MAINTAIN RUNOFF DIVERSION AROUND EXCAVATED WASHOUT STRUCTURE UNTIL STRUCTURE IS REMOVED.

CRUSHED STONE CONSTRUCTION EXIT

Co

REFERENCE MANUAL FOR EROSION AND SEDIMENT CONTROL IN GEORGIA FOR ADDITIONAL DETAILS

EXIT DIAGRAM

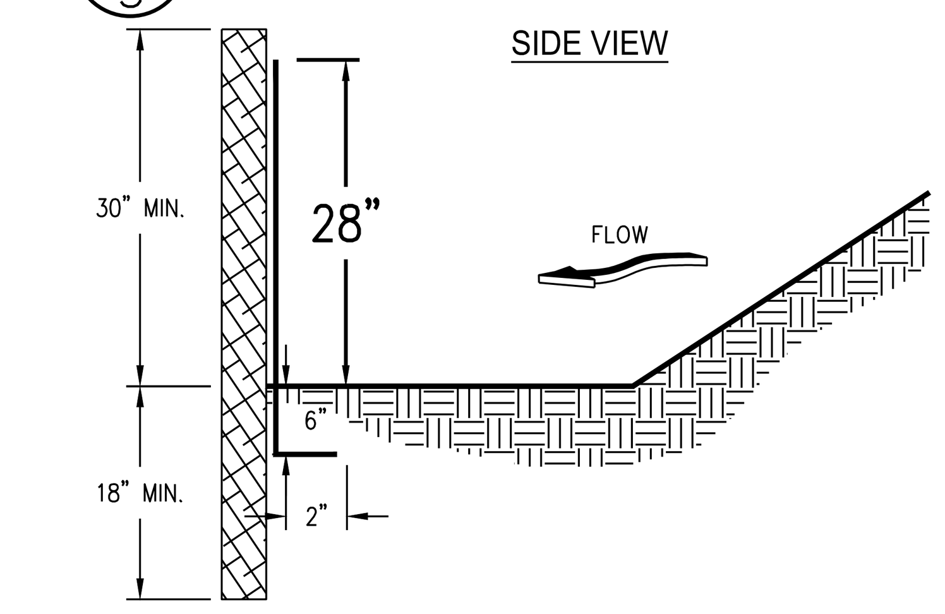


NOTES:
1. AVOID LOCATING ON STEEP SLOPES OR AT CURVES ON PUBLIC ROADS.
2. REMOVE ALL VEGETATION AND OTHER UNSUITABLE MATERIAL FROM THE FOUNDATION AREA, GRADE, AND CROWN FOR POSITIVE DRAINAGE.
3. AGGREGATE SIZE SHALL BE IN ACCORDANCE WITH NATIONAL STONE ASSOCIATION R-2 (1.5"-3.5" STONE).
4. GRAVEL PAD SHALL HAVE A MINIMUM THICKNESS OF 6".
5. PAD WIDTH SHALL BE EQUAL FULL WIDTH AT ALL POINTS OF VEHICULAR EGRESS, BUT NO LESS THAN 20'.
6. A DIVERSION RIDGE SHOULD BE CONSTRUCTED WHEN GRADE TOWARD PAVED AREA IS GREATER THAN 2%..
7. INSTALL PIPE UNDER THE ENTRANCE IF NEEDED TO MAINTAIN DRAINAGE DITCHES.
8. WHEN WASHING IS REQUIRED, IT SHOULD BE DONE ON AN AREA STABILIZED WITH CRUSHED STONE THAT DRAINS INTO AN APPROVED SEDIMENT TRAP OR SEDIMENT BASIN (DIVERT ALL SURFACE RUNOFF AND DRAINAGE FROM THE ENTRANCE TO A SEDIMENT CONTROL DEVICE).
9. WASHRACKS AND/OR TIRE WASHERS MAY BE REQUIRED DEPENDING ON SCALE AND CIRCUMSTANCE. IF NECESSARY, WASHRACK DESIGN MAY CONSIST OF ANY MATERIAL SUITABLE FOR TRUCK TRAFFIC THAT REMOVE MUD AND DIRT.
10. MAINTAIN AREA IN A WAY THAT PREVENTS TRACKING AND/OR FLOW OF MUD ONTO PUBLIC RIGHTS-OF-WAYS. THIS MAY REQUIRE TOP DRESSING, REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT.

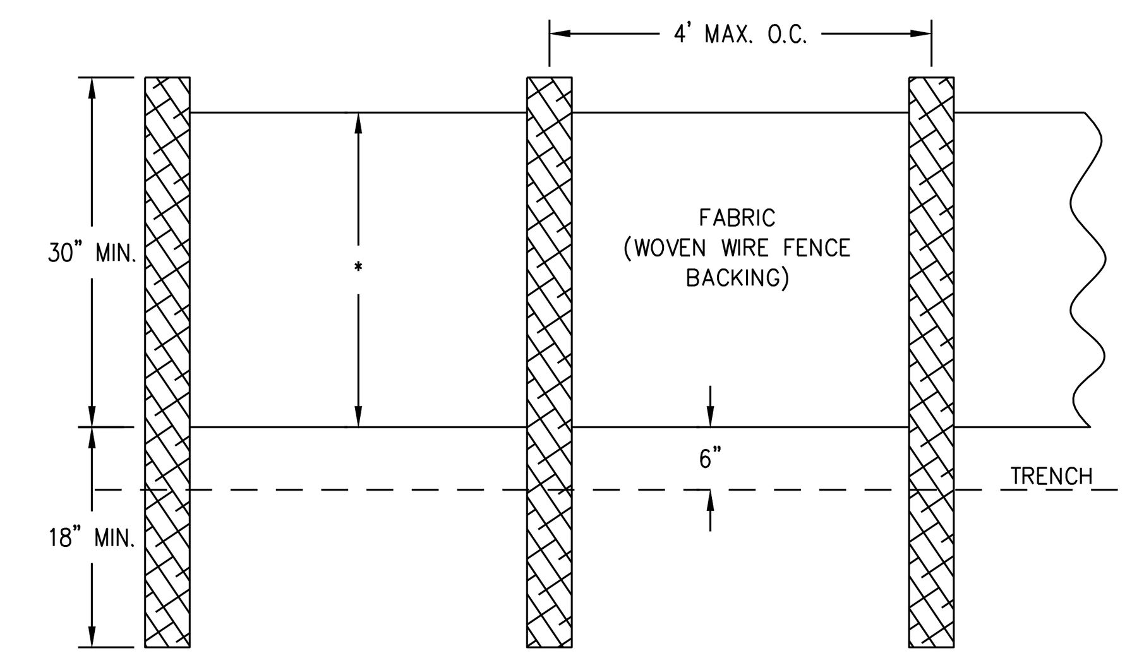
SILT FENCE - TYPE SENSITIVE

Sd1 S

SIDE VIEW



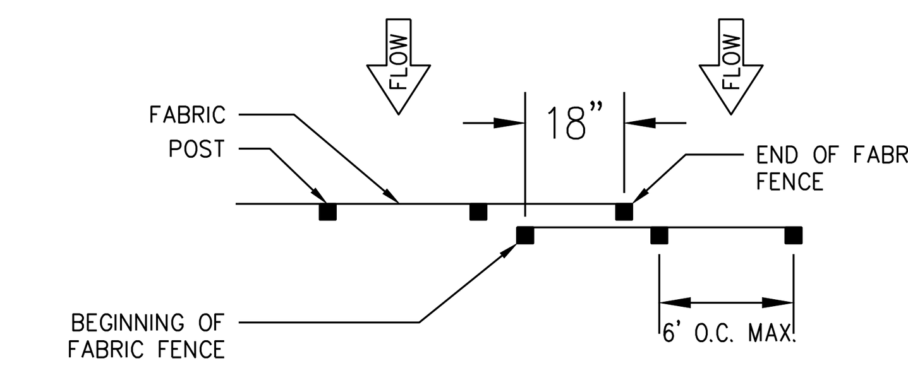
FRONT VIEW



NOTES:
1. USE STEEL POSTS (1.15-1.25 LB./FT. MIN AS SPECIFIED BY THE EROSION, SEDIMENTATION, AND POLLUTION CONTROL MANUAL)
2. HEIGHT (*) IS TO BE SHOWN ON THE EROSION, SEDIMENTATION, AND POLLUTION CONTROL PLAN. (* = 28 INCHES)

FASTENERS FOR SILT FENCES

OVERLAP AT FABRIC ENDS



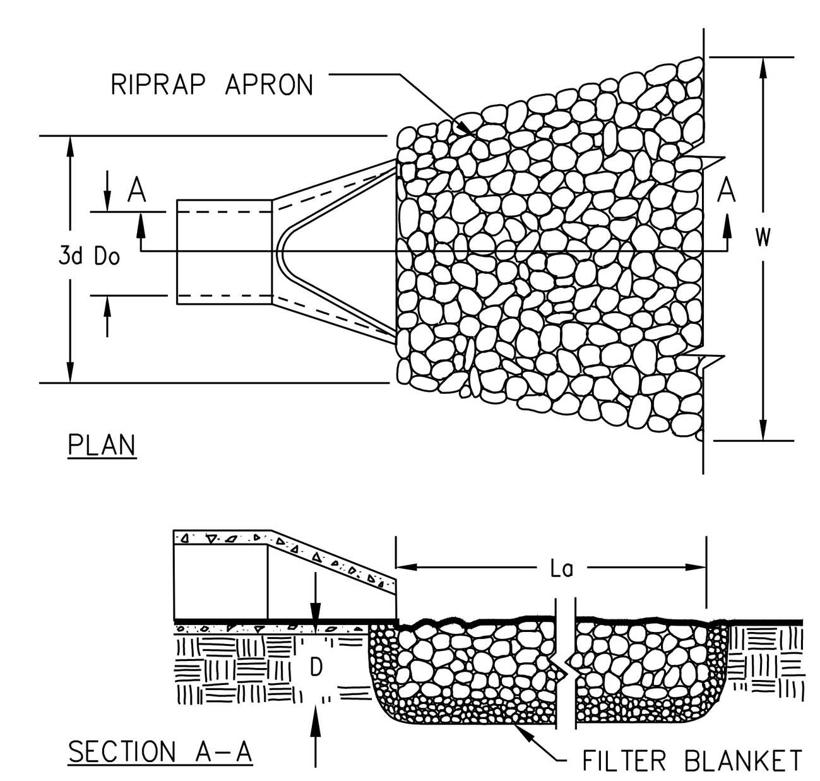
TOP VEIW - NOT TO SCALE

NOTES:
1. THE FABRIC AND WIRE SHOULD BE SECURELY FASTENED TO POSTS AND FABRIC ENDS MUST BE OVERLAPPED A MINIMUM OF 18" OR WRAPPED TOGETHER AROUND A POST TO PROVIDE A CONTINUOUS FABRIC BARRIER AROUND THE INLET.

RIPRAP OUTLET PROTECTION

St

PIPE OUTLET TO FLAT AREA -- NO WELL DEFINED CHANNEL



NOTES:
1. La IS THE LENGTH OF THE RIPRAP APRON.
2. D = 1.5 TIMES THE MAXIMUM STONE DIAMETER BUT NOT LESSTHAN 6".
3. IN A WELL-DEFINED CHANNEL, EXTEND THE APRON UP THE CHANNEL BANKS TO AN ELEVATION OF 6" ABOVE THE MAXIMUM TAILWATER DEPTH OR TO THE TOP OF THE BANK (WHICHEVER IS LESS).
4. A FILTER BLANKET OR FILTER FABRIC SHOULD BE INSTALLED BETWEEN THE RIPRAP AND THE SOIL FOUNDATION.

PIPE OUTLET TO WELL DEFINED CHANNEL

DETAILS - STRUCTURAL PRACTICES AND VEGETATIVE MEASURES EROSION, SEDIMENTATION AND POLLUTION CONTROL PLAN

PROJECT# 2024.037

E-500

V:\2024-037 - Adams St - Buford\1000 - AutoCAD\30 - Construction\2024.037_ESPC.dwg, E-500 3/5/2025 4:18 PM by Grant Crowe

Methods and Materials

A. TEMPORARY METHODS

Mulches
See standard Ds1–Disturbed Area Stabilization (With Mulching Only). Synthetic resins may be used instead of asphalt to bind mulch material. Refer to standard Tac–Tackifiers. Resins such as Curasol or Terratack should be used according to manufacturer's recommendations.

Vegetative Cover
See specification Ds2–Disturbed Area Stabilization (With Temporary Seeding).

Spray–on Adhesives
These are used on mineral soils (not effective on much soils). Keep traffic off these areas. Refer to specification Tac–Tackifiers.

Tillage
This practice is designed to roughen and bring clods to the surface. It is an emergency measure which should be used before wind erosion starts. Begin plowing on windward side of site. Chisel type plows spaced about 12 inches apart, spring–toothed harrows, and similar plows are examples of equipment which may produce the desired effect.

Irrigation
This is generally done as an emergency treatment. Site is sprinkled with water until the surface is wet. Repeat as needed.

Barriers.
Solid board fences, snowfences, burlap fences, crate walls, bales of hay and similar material can be used to control air currents and soil blowing. Barriers placed at right angles to prevailing currents at intervals of about 15 time their height are effective in controlling wind erosion.
Calcium Chloride. Apply at rate that will keep surface moist. May need re–treatment.

Calcium Chloride
Apply at rate that will keep surface moist. May need retreatment.

B. PERMANENT METHODS

Permanent Vegetation
See standard Ds3–Disturbed Area Stabilization (With Permanent Vegetation).
Existing trees and large shrubs may afford valuable protection if left in place.
See specification Tp–Topsoiling.

Stone
Cover surface with crushed stone or coarse gravel. See standard Cr–Construction Road Stabilization

Du DUST CONTROL ON DISTURBED AREAS

CONSTRUCTION SPECIFICATIONS

Grading and Shaping
Excessive water runoff shall be reduced by properly designed and installed erosion control practices such as closed drains, ditches, dikes, diversions, sediment barriers and others.

No shaping or grading is required if slopes can be stabilized by handseeded vegetation or if hydraulic seeding equipment is to be used.

Seedbed Preparation
When a hydraulic seeder is used, seedbed preparation is not required. When using conventional or handseeding, seedbed preparation is not required if the soil material is loose and not sealed by rainfall.

When soil has been sealed by rainfall or consists of smooth cut slopes, the soil shall be pitted, trenched or otherwise scarified to provide a place for seed to lodge and germinate.

Lime and Fertilizer
Agricultural lime is required unless soil tests indicate otherwise. Apply agricultural lime at a rate of one ton per acre.
Graded areas require lime application. Soils can be tested to determine if fertilizer is needed. On reasonably fertile soils or soil material, fertilizer is not required. For soils with very low fertility, 500 to 700 pounds of 10–10–10 fertilizer or the equivalent per acre (1216 lbs./1,000 sq. ft.) shall be applied. Fertilizer should be applied before land preparation and incorporated with a disk, ripper or chisel.

Seeding
Select a grass or grass legume mixture suitable to the area and season of the year. Seed shall be applied uniformly by hand, cyclone seeder, drill, cultipacker seeder, or hydraulic seeder (slurry including seed and fertilizer). Drill or cultipacker seeders should normally place seed one–quarter to one–half inch deep. Appropriate depth of planting is ten times the seed diameter. Soil should be "raked"lightly to cover seed with soil if seeded by hand.

MULCHING

TEMPORARY VEGETATION CAN, IN MOST CASES, BE ESTABLISHED WITHOUT THE USE OF MULCH. MULCH WITHOUT SEEDING SHOULD BE CONSIDERED FOR SHORT–TERM PROTECTION. REFER TO DS1 DISTURBED AREA STABILIZATION (WITH MULCHING ONLY).

Irrigation
During times of drought, water shall be applied at a rate not causing runoff and erosion. The soil shall be thoroughly wetted to a depth that will insure germination of the seed. Subsequent applications should be made when needed.

SPECIES	BROADCAST RATES Rate Per Acre	BROADCAST RATES PLS Per 1000 SF	RESOURCE AREA[1]	PLANTING DATES BY RESOURCE AREA (Solid lines indicate optimum dates, dotted lines indicate permissible but marginal dates.) J F M A M J J A S O N D	REMARKS
BARLEY (Hordeum vulgare)			P		
alone	3 bu. (144 lbs.)	3.3 lb.			14,000 seed per pound Winterhardy. Use on productive soils.
in mixture	1/2 bu. (24 lbs.)	0.6 lb.			
LESPEDEZA, ANNUAL (Lespedeza striata)			P		
alone	40 lbs.	0.9 lb.			200,000 seed per pound. May volunteer for several years.
in mixtures	10 lbs.	0.2 lb.			Use inoculant EL.
LOVEGRASS, WEEPING (Eragrostis curvula)			P		
alone	4 lbs.	0.1 lb.			1,500,000 seed per pound. May last for several years. Mix with Sericea lespedeza.
in mixtures	2 lbs.	0.05 lb.			
MILLETT, BROWNTOP (Panicum fasciculatum)			P		
alone	40 lbs.	0.9 lb.			137,000 seed per pound. Quick dense cover. Will provide too much competition in mixtures if seeded at high rates.
in mixtures	10 lbs.	0.2 lb.			
MILLET, PEARL (Pennesetum glaucum)			P		
alone	50 lbs.	1.1 lb.			88,000 seed per pound. Quick dense cover. May reach 5 feet in height. Not recommended for mixtures.
OATS (Avena sativa)			P		
alone	4 bu. (128 lbs.)	2.9 lb.			13,000 seed per pound. Use on productive soils. Not as winterhardy as rye or barley.
in mixtures	1 bu. (32 lbs.)	0.7 lb.			
RYE (Secale cereale)			P		
alone	3 bu. (168 lbs.)	3.9 lb.			18,000 seed per pound. Quick cover. Drought tolerant and winterhardy
in mixtures	1/2 bu. (28 lbs.)	0.6 lb.			
RYEGRASS, ANNUAL (Lolium temulentum)			P		
alone	40 lbs.	0.9 lb.			227,000 seed per pound. Dense cover. Very competitive and isot to be used in mixtures.
SUDANGRASS (Sorghum sudanese)			P		
alone	60 lbs.	1.4 lb.			55,000 seed per pound. Good recommended for mixtures.
WHEAT (Triticum aestivum)			P		
alone	3 bu. (180 lbs.)	4.1 lb.			15,000 seed per pound. Winterhardy
in mixtures	1/2 bu. (30 lbs.)	0.7 lb.			

1/ Temporary cover crops are very competitive and will crown out perennials if seeded to heavily.
2/ Reduce seeding rates by 50% when drilled.
3/ PLS is an abbreviation for Pure Live Seed
4/ P represents the Southern Piedmont MLRA

Ds2 DISTURBED AREA STABILIZATION (WITH TEMPORARY VEGETATION)

CONSTRUCTION SPECIFICATIONS

Mulching without Seeding
This standard applies to graded or cleared areas where seeding may not have a suitable growing season to produce an erosion retardant cover, but can be stabilized with a mulch cover.

Site Preparation
1. Grade to permit the use of equipment for applying and anchoring mulch.
2. Install needed erosion control measures as required such as dikes, diversions, berms, terraces and sediment barriers.
3. Loosen compact soil to a minimum depth of 3 inches.

Mulching Materials
Select one of the following materials and apply at the depth indicated:
1. Dry straw or hay shall be applied at a depth of 2 to 4 inches providing complete soil coverage. One advantage of this material is easy application.
2. Wood waste (chips, sawdust or bark) shall be applied at a depth of 2 to 3 inches. Organic material from the clearing stage of development should remain on site, be chipped, and applied as mulch. This method of mulching can greatly reduce erosion control costs.
3. Polyethylene film shall be secured over banks or stockpiled soil material for temporary protection. This material can be salvaged and re–used.

Applying Mulch
When mulch is used without seeding, mulch shall be applied to provide full coverage of exposed area.
1. Dry straw or hay mulch and wood chips shall be applied uniformly by hand or by mechanical equipment.
2. If the area will eventually be covered with perennial vegetation, 20–30 pounds of nitrogen per acre in addition to the normal amount shall be applied to offset the uptake of nitrogen caused by the decomposition of the organic mulches.
3. Apply polyethylene film on exposed areas.

Anchoring Mulch
1. Straw or hay mulch can be pressed into the soil with a disk harrow with the disk set straight or with a special "packer disk". Disks may be smooth or serrated and should be 20 inches or more in diameter and 8 to 12 inches apart. The edges of the disk should be dull enough not to cut the mulch but to press it into the soil leaving much of it in an erect position. Straw or hay mulch shall be anchored immediately after application.

   Straw or hay mulch spread with special blower–type equipment may be anchored. Tackifiers, binders and hydraulic mulch with tackifier specifically designed for tacking straw can be substituted for emulsified asphalt. Please refer to specification TAC–TACKIFIERS. Plastic mesh or netting with mesh no larger than one inch by one inch shall be installed according to manufacturer's specifications.
2. Netting of the appropriate size shall be used to anchor wood waste. Openings of the netting shall not be larger than the average size of the wood waste chips.
3. Polyethylene film shall be anchor trenched at the top as well as incrementally as necessary.

Ds1 DISTURBED AREA STABILIZATION (WITH MULCHING ONLY)

SOD LAYOUT AND PREPARATION

LAY SOD IN A STAGGERED PATTERN. BUTT THE STRIPS TIGHTLY AGAINST EACH OTHER. DO NOT LEAVE SPACES AND DO NOT OVERLAP. A SHARPENED MASON'S TROWEL IS A HANDY TOOL FOR TUCKING DOWN THE ENDS AND TRIMMING PIECES.

BUTTING: ANGLED ENDS CAUSED BY THE AUTOMATIC SOD CUTTER MUST BE MATCHED CORRECTLY.

DIRECTIONS FOR INITIAL MAINTENANCE

Step 1. ROLL SOD IMMEDIATELY TO ACHIEVE FIRM CONTACT WITH THE SOIL

Step 2. WATER TO A DEPTH OF 4" AS NEEDED. WATER WELL AS SOON AS THE SOD IS LAID.

Step 3. MOW WHEN THE SOD IS ESTABLISHED -- IN 2–3 WEEKS. SET THE MOWER HIGH (2"–3").

APPEARANCE OF GOOD SOD

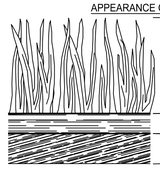

FIGURE 6-6.2 - SOD MAINTENANCE AND INSTALLATION

CONSTRUCTION SPECIFICATIONS INSTALLATION

Soil Preparation

Bring soil surface to final grade. Clear surface of trash, woody debris, stones and clods larger than 1". Apply sod to soil surfaces only and not frozen surfaces, or gravel type soils. Topsoil properly applied will help guarantee a stond. Don't use topsoil recently treated with herbicides or soil sterilants.

Mix fertilizer into soil surface. Fertilize based on soil tests or the Table 6–6.1 below.

Table 6–6.1 Fertilizer Requirements for Soil Surface Application

Fertilizer Type	Fertilizer Rate (lbs./acre)	Fertilizer Rate (lbs./sq.ft.)	Season
10–10–10	1000	.025	Fall

Agricultural lime should be applied based on soil tests or at a rate of 1 to 2 tones per acre.

Installation

Lay sod with tight joints and in straight lines. Don't overlap joints. Stagger joints and do not stretch sod. (See Figure 6–6.2)
On slopes steeper than 3:1, sod should be anchored with pins or other approved methods. Installed sod should be rolled or tamped to provide good contact between sod and soil.
Irrigate sod and soil to a depth of 4" immediately after installation.
Sod should not be cut or spread in extremely wet or dry weather. Irrigation should be used to supplement rainfall for a minimum of 2–3 weeks.

Materials

Sod selected should be certified. Sod grown in the general area of the project is desirable.
1. Sod should be machine cut and contain 3/4" (+ or –1/4") of soil, not including shoots or thatch.
2. Sod should be cut to the desired size within + or –5%. Torn or uneven pads should be rejected.
3. Sod should be cut and installed within 36 hours of digging.
4. Avoid planting when subject to frost heave or hot weather, if irrigation is not available.
5. The sod type should be shown on the plans or installed according to Table 6–6.2. See Figure 6–4.1 for your Resource Area.

Table 6–6.2 Sod Planting Requirement

Grass	Varieties	Growing Season
Bermudagrass	Common Tifway Tifgreen Tiffawn	Warm Weather
Zoysia	Emerald Myer	Warm Weather
Tall Fescue	Kentucky	Cool Weather

MAINTENANCE

Re–sod areas where an adequate stand of sod is not obtained. New sod should be mowed sparingly. Grass height should not be cut less than 2"–3" or as specified (See figure 6–6.2).
Apply one ton of agricultural lime as indicated by soil test or every 4–6 years. Fertilize grasses in accordance with the soil tests or Table 6–6.3.

Table 6–6.3 Fertilizer Requirements for Sod

Types Of Species	Planting Year	Fertilizer (N–P–K)	Rate (lbs./acre)	Nitrogen Top Dressing Rate (lbs./acre)
Cool Season Grasses	First Second Maintenance	6–12–12 6–12–12 10–10–10	1500 1000 400	50–100 --- 30
Warm Season Grasses	First Second Maintenance	6–12–12 6–12–12 10–10–10	1500 800 400	50–100 50–100 30

CONDITIONS
Permanent perennial vegetation is used to provide a protective cover for exposed areas including cuts, fills, dams, and other denuded areas.

PLANNING CONSIDERATIONS
1. Use conventional planting methods where possible.
2. When mixed plantings are done during marginal planting periods, companion crops shall be used.
3. No–till planting is effective when planting is done following a summer or winter annual cover crop. Sericea lespedeza planted no–till into stands of rye is an excellent procedure.
4. Block sod provides immediate cover. It is especially effective in controlling erosion adjacent to concrete flumes and other structures. Refer to Specification Ds4–Disturbed Area Stabilization (With Sodding).
5. Irrigation should be used when the soil is dry or when summer plantings are done.
6. Low maintenance plants, as well as natives, should be used to ensure long–lasting erosion control.
7. Mowing should not be performed during the quail nesting season (May to September).
8. Wildlife plantings should be included in critical area plantings.

   Wildlife plantings
   Commercially available plants beneficial to wildlife species include the following:

   Mast Bearing Trees
   Beech, Black Cherry, Blackgum, Chesnut, Chinkapin, Hackberry, Hickory, Honey Locust, Native Oak, Persimmon, Sawtooth Oak and Sweetgum.
   All trees that produce nuts or fruits are favored by many game species. Hickory provides nuts used mainly by squirrels and bear.

   Shrubs and Small Trees
   Bayberry, Bicolor Lespedeza, Crabapple, Dogwood, Huckleberry or Native Huckleberry, Mountain Laurel, Native Holly, Red Cedar, Red Mulberry, Sumac, Wax Myrtle, Wild Plum and Blackberry.
   Plant in patches without tall trees to develop stable shrub communities. All produce fruits used by many kinds of wildlife, except for lespedeza which produces seeds used by quail and songbirds.

   Grasses, Legumes, Vines and Temporary Cover
   Bahiagrass, Bermudagrass, Grass–Legume mixtures, Partridge Pea, Annual Lespedeza, Orchardgrass (for mountains), Browntop Millet (for temporary cover), and Native grapes.
   Provides herbaceous cover in clearings for a game bird brood–rearing habitat.
   Appropriate legumes such as vetches, clovers, and lespedezas may be mixed with grass, but they may die out after a few years.

CONSTRUCTION SPECIFICATIONS

Grading and Shaping
Grading and shaping may not be required where hydraulic seeding and fertilizing equipment is to be used. Vertical banks shall be sloped to enable plant establishment.
When conventional seeding and fertilizing are to be done, grade and shape where feasible and practical, so that equipment can be used safely and efficiently during seedbed preparation, seeding, mulching and maintenance of the vegetation.
Concentrations of soil erosion shall be diverted to a safe outlet. Diversions and other treatment practices shall conform with the appropriate standards and specifications.

Lime and Fertilizer Rates
Agricultural lime is required at the rate of one to two tons per acre unless soil tests indicate otherwise. Graded areas require lime application. If lime is applied within six months of planting permanent perennial vegetation, additional lime is not required. Agricultural lime shall be within the specifications of the Georgia Department of Agriculture.
Lime spread by conventional equipment shall be "ground limestone." Ground limestone is calcitic or dolomitic limestone ground so that 90 percent of the material will pass through a 10–mesh sieve, not less than 50 percent will pass through a 50–mesh sieve and not less than 25 percent will pass through a 100–mesh sieve.
Fast–acting lime spread by hydraulic seeding equipment should be "finely ground limestone" spanning from the 180 micron size to the 5 micron size. Finely ground limestone is calcitic or dolomitic limestone ground so that 95 percent of the material will pass through a 100–mesh sieve.
It is desirable to use dolomitic limestone in the Sand Hills, Southern Coastal Plain and Atlantic Coast Flatwoods MLRAs.
Agricultural lime is generally not required where only trees are planted.
Initial fertilization, nitrogen, topdressing, and maintenance fertilizer requirements for each species are listed in Table 6–5.1.

Lime and Fertilizer Application
When hydraulic seeding equipment is used, the initial fertilizer shall be mixed with seed, inoculant (if needed), and wood cellulose or wood pulp fiber mulch and applied in a slurry. The inoculant, if needed, shall be mixed with the seed prior to being placed into the hydraulic seeder. The slurry mixture will be agitated during application to keep the ingredients thoroughly mixed. The mixture will be spread uniformly over the area within an hour after being placed in the hydroseeder.
Finely ground limestone can be applied in the mulch slurry or in combination with the top dressing.
When conventional planting is to be done, lime and fertilizer shall be applied uniformly in one of the following ways:
1. Apply before land preparation so that it will be mixed with the soil during seedbed preparation.
2. Mix with the soil used to fill the holes, distribute in furrows.
3. Broadcast after steep surfaces are scarified, pitted or trenched.
4. A fertilizer pellet shall be placed at root depth in the closing hole beside each pine tree seedling.

Plant Selection
Refer to the tables provided for approved species. Species not listed shall be approved by the State Resource Conservationalist of the Natural Resources Conservation Service before they are used.
Plants shall be selected on the basis of species characteristics, site and soil conditions, planned use and maintenance of the area; time of year of planting, method of planting; and the needs and desires of the land user.
Some perennial species are easily established and can be planted alone. Examples of these are Common Bermuda, Tall Fescue, and Weeping Lovegrass.
Other perennials, such as Bahia Grass and Sericea Lespedeza, are slow to become established and should be planted with another perennial species. The additional species will provide quick cover and ample soil protection until the target perennial species become established. For example, Common seeding combinations are 1) Weeping Lovegrass with Sericea Lespedeza (scarified) and 2) Tall Fescue with Sericea Lespedeza (unscarified).
Plant selection may also include annual companion crops. Annual companion crops should be used only when the perennial species are not planted during their optimum planting period. A common mixture in Brown Top Millet with Common Bermuda in mid–summer. Care should be taken in selecting companion crop species and seeding rates because annual crops will compete with perennial species for water, nutrients, and growing space. A high seeding rate of the companion crop may prevent the establishment of perennial species.
Ryegrass shall not be used in any seeding mixtures containing perennial species due to its ability to out–compete desired species chosen for permanent perennial cover.

Seed Quality
The term "pure live seed" is used to express the quality of seed and is not shown on the label. Pure live seed, PLS, is expressed as a percentage of the seeds that are pure and will germinate. Information on percent germination and purity can be found on seed tags. PLS is determined by multiplying the percent of pure seed with the percent of germination; i.e.,
(PLS = % germination x % purity)
EXAMPLE:
Common Bermuda seed
70% germination, 80% purity
PLS = 70% germination x 80% purity
PLS = 56%
The percent of PLS helps you determine the amount of seed you need. If the seeding rate is 10 pounds PLS and the bulk seed is 56% PLS, the bulk seeding rate is:

$$\frac{10 \text{ lbs. PLS/acre}}{56\% \text{ PLS}} = 17.9 \text{ lbs/acre}$$

You would need to plant 17.9 lbs/acre to provide 10 lbs/acre of pure live seed.

Seedbed Preparation
Seedbed preparation may not be required where hydraulic seeding and fertilizing equipment is to be used (but is strongly recommended for any seeding process, when possible). When conventional seeding is to be used, seedbed preparation will be done as follows:
Broadcast Plantings
1. Tillage, at a minimum, shall adequately loosen the soil to a depth of 4 to 6 inches; alleviate compaction; incorporate lime and fertilizer; smooth and firm the soil; allow for the proper placement of seed, sprigs, or plants; and allow for the anchoring of straw or hay mulch if a disk is to be used.
2. Tillage may be done with any suitable equipment.
3. Tillage should be done on the contour where feasible.
4. On slopes too steep for the safe operation of tillage equipment, the soil surface shall be pitted or trenched across the slope with appropriate hand tools to provide two places 6 to 8 inches apart in which seed may lodge and germinate. Hydraulic seeding may also be used.

Individual Plants
1. Where individual plants are to be set, the soil shall be prepared by excavating holes, opening furrows, or dibble planting.
2. For nursery stock plants, holes shall be large enough to accommodate roots without crowding.
3. Where pine seedlings are to be planted, subsoil under the row 36 inches deep on the contour four to six months prior to planting. Subsoiling should be done when the soil is dry, preferable in August or September.

Inoculants
All legume seed shall be inoculated with appropriate nitrogen–fixing bacteria. The inoculant shall be a pure culture prepared specifically for the seed species and used within the dates on the container.
A mixing medium recommended by the manufacturer shall be used to bond the inoculant to the seed. For conventional seeding, use twice the amount of inoculant recommended by the manufacturer. For hydraulic seeding, four times the amount of inoculant recommended by the manufacturer shall be used.
All inoculated seed shall be protected from the sun and high temperatures and shall be planted the same day inoculated. No inoculated seed shall remain in the hydroseeder longer than one hour.

Planting
Hydraulic Seeding
Mix the seed (inoculated if needed), fertilizer, and wood cellulose or wood pulp fiber mulch with water and apply in a slurry uniformly over the area to be treated. Apply within one hour after the mixture is made.
Conventional Seeding
Seeding will be done on a freshly prepared firmed seedbed. For broadcast planting, use a cultipacker–seeder, drill, rotary seeder, other mechanical seeder, or hand seeding to distribute the seed uniformly over the area to be treated. Cover the seed lightly with 1/8 to 1/4 inch of soil for small seed and 1/2 to 1 inch for large seed when using a cultipacker or other suitable equipment.
No–till Seeding
No–till seeding is permissible into annual cover crops when planting is done following maturity of the cover crop or if the temporary cover stand is sparse enough to allow adequate growth of the permanent (perennial) species. No–till seeding shall be done with appropriate no–till seeding equipment. The seed must be uniformly distributed and planted at the proper depth.
Individual Plants
Shrubs, vines and sprigs may be planted with appropriate planters or hand tools. Pine trees shall be planted manually in the subsoil furrow. Each plant shall be set in a manner that will avoid crowding the roots.
Nursery stock plants shall be planted at the same depth or slightly deeper than they grew at the nursery. The tips of vines and sprigs must be at or slightly above the ground surface.
Where individual holes are dug, fertilizer shall be placed in the bottom of the hole, two inches of soil shall be added and the plant shall be set in the hole.

MULCHING

Mulching is required for all permanent vegetation applications. Mulch applied to seeded areas shall achieve 75% to 100% soil cover. When selecting a mulch, design professionals should consider the mulch's functional longevity, vegetation establishment enhancement, and erosion control effectiveness. Select the mulching material from the following and apply as indicated.

1. **Dry straw or dry hay of good quality and free of weed seeds can be used. Dry straw shall be applied at the rate of 2 tons per acre. Dry hay shall be applied at a rate of 2 1/2 tons per acre.**
2. **Wood cellulose mulch or wood pulp fiber shall be used with hydraulic seeding. It shall be applied at the rate of 500 lbs/acre. Dry straw or dry hay shall be applied (at the rate indicated above) after hydraulic seeding.**
3. **1000 lbs. of wood cellulose or wood pulp fiber, which includes a tackifier, shall be used with hydraulic seeding on slopes 3/4:1 or steeper.**
4. **Sericea Lespedeza hay containing mature seed shall be applied at a rate of 3 tons per acre.**
5. **Pine straw or pine bark shall be applied at a thickness of 3 inches for bedding purposes. Other suitable materials in sufficient quantity may be used where ornamentals or other ground covers are planted. This is not appropriate for seeded areas.**
6. **When using temporary erosion control blankets or block sod, mulch is not required.**
7. **Bituminous treated roving may be applied on planted areas, slopes, in ditches, or dry waterways to prevent erosion. Bituminous treated roving shall be applied within 24 hours after an area has been planted. Application rates and materials must meet Georgia Department of Transportation specifications.**

Wood Cellulose and wood pulp fibers shall not contain germination or growth inhibiting factors. They shall be evenly dispersed when agitated in water. The fibers shall contain a dye to allow visual metering and aid in uniform application during seeding.

Applying Mulch
Straw or hay mulch will be spread uniformly within 24 hours after seeding and/or planting. The mulch may be spread by blower–type spreading equipment or by hand. Mulch shall be applied to cover 75% of the soil surface.
Wood cellulose or wood fiber mulch shall be applied uniformly with hydraulic seeding equipment.

Anchoring Mulch
Anchor straw or hay mulch immediately after application by one of the following methods:
1. Hay or straw mulch shall be pressed into the soil immediately after the mulch is spread. A special "packer disk" or disk harrow with the disks set straight may be used. The disks may be smooth or serrated and should be 20 inches or more in diameter and 8 to 12 inches apart. The edges of the disks shall be dull enough to press the mulch into the ground without cutting it, leaving much of it in an erect position. Mulch shall not be plowed into the soil.
2. Synthetic tackifiers, binders or hydraulic mulch specifically designed to tack straw, shall be applied in conjunction with or immediately after the mulch is spread. Synthetic tackifiers shall be mixed and applied according to manufacturer's specifications. All tackifiers, binders or hydraulic mulch specifically designed to tack straw should be verified nontoxic through EPA 2021.0 testing. Refer to Tac–Tackifiers.
3. Rye or wheat can be included with Fall and Winter plantings to stabilize the mulch. The shall be applied at a rate of 1/4 to 1/2 bushel per acre.
4. Plastic mesh or netting with mesh no larger than one inch by one inch may be needed to anchor straw or hay mulch on unstable soils and concentrated flow areas. These materials shall be installed and anchored according to manufacturer's specifications.

Bedding Material
Mulch is used as a bedding material to conserve moisture and control weeds in nurseries, ornamental beds, around shrubs, and on bare areas on lawns.

Material	Depth
Grain Straw	4"–6"
Grass Hay	4"–6"
Pine Needles	3"–5"
Wood Waste	4"–6"

Irrigation
Irrigation will be applied at a rate that will not cause runoff.

Topdressing
Topdressing will be applied on all temporary and permanent (perennial) species planted alone or in mixtures with other species. Recommended rates of application are listed in Table 6–5.1.

Second Year Maintenance Fertilization
Second year fertilizer rates and maintenance fertilizer rates are listed in Table 6–5.1.

Lime Maintenance Application
Apply one ton of agricultural lime every 4 to 6 years or as indicated by soil tests. Soil tests can be conducted to determine more accurate requirements, if desired.

Use and Management
Mow Sericea Lespedeza only after frost to ensure that the seeds are mature. Mow between November and March.
Bermudagrass, Bahiagrass and Tall Fescue may be mowed as desired. Maintain at least 6 inches of top growth under any use and management. Moderate use of top growth is beneficial after establishment.
Exclude traffic until the plants are well established. Because of the quail nesting season, mowing should not take place between May and September.

FERTILIZER REQUIREMENTS

TYPE OF SPECIES	YEAR	ANALYSIS OR EQUIVALENT	RATE	N TOP DRESSING RATE
1. Cool season grasses	First Second Maintenance	6–12–12 6–12–12 10–10–10	1500 lbs./ac. 1000 lbs./ac. 400 lbs.ac.	50–100 lbs./ac. 1/ 2/ --- 30

1/ Apply in spring fallowing seeding.
2/ Apply in split applications when high rates are used.
3/ Apply in 3 split applications.
4/ Apply when plants are pruned.
5/ Apply to grass species only.
6/ Apply when plants grow to a height of 2 to 4 inches.

Ds3 DISTURBED AREA STABILIZATION (WITH PERMANENT VEGETATION)

PLANTS, PLANTING RATES, AND PLANTING DATES FOR PERMANENT COVER

SPECIES	BROADCAST RATES Rate Per Acre	BROADCAST RATES PLS Per 1000 SF	RESOURCE AREA[1]	PLANTING DATES BY RESOURCE AREAS (Solid lines indicate optimum dates, dotted lines indicate permissible but marginal dates.) J F M A M J J A S O N D	REMARKS
BAHIA, PENSACOLA (Paspalum notatum)					
alone or with temporary cover	60 lbs.	1.4 lb.	P		166,000 seed per pound. Low growing. Sod forming. Slow to establish. Plant with a companion crop. Will spread into bermuda pastures and lawns. Mix with Sericea lespedeza or weeping lovegrass.
with other perennials	30 lbs.	0.7 lb.	C		
BAHIA, WILMINGTON (Paspalum notatum)					
alone or with temporary cover	60 lbs.	1.4 lb.	M–L		Same as above.
with other perennials	30 lbs.	0.7 lb.	P		
BERMUDA, COMMON (Cynodon dactylon) hulled seed					
alone	10 lbs.	0.2 lb.	P		1,787,000 seed per pound. Quick cover. Low growing and sod forming. Full sun. Good for athletic fields.
with other perennials	6 lbs.	0.7 lb.	C		
BERMUDA, COMMON (Cynodon dactylon) Unhulled seed					
with temporary cover	10 lbs.	0.2 lb.	P		Plant with winter annuals
with other perenials	6 lbs.	0.1 lb.	C		Plant with Tall fescue
BERMUDA SPRIGS (Cynodon dactylon)					
Coastal, Common Midland, or Tifi 44	40 cu. Ft. sod plug@ 3' x 3'	0.9 cu. Ft.	M–L		A cubic foot contains approximately 650 sprigs. A bushel contaiines 1.25 cubic feet or approximately 800 sprigs.
Coastal, Common or Tifi 44			P C		Same as above
Tifi 78			C		Southern Coastal Plain Only.
CENTIPEDE (Eremochloa ophiuroides)	Block sod only		P C		Drought tolerant. Full sun or partial shade. Effective adjacent to concrete and in concentrated flow areas. Irrigation is needed until fully established. Do not plat near pastures. Winterhardy as far north as Athens and Atlanta.
CROWNVETCH (Coronilla varia)			M–L		100,000 seed per pound. Dense growth. Drought tolerant and fire resistant. Attractive rose, pink, and white blossoms spring to late fall. Mix with 30 pounds of Tall fescue or 15 pounds of rye.
with winter annuals or cool season grasses	15 lbs.	0.3 lb.	P		
FESCUE, TALL (Festuca arundinacea)					227,000 seed per pound. Use alone only on better sites. Not for drought soils. Mix with perennial lespedezas or Crownvetch. Apply topdressing in spring following fall plantings. Not for heavy use areas or athletic fields.
alone	50 lbs.	1.1 lb.	M–L		
with other perennials	30 lbs.	0.7 lb.	P		
KUDZU (Pueraria thumbergiana)					
plants or crowns	3' – 7' apart		ALL		Rapid and vigorous growth. Excellent in gully erosion control. Will climb. Good livestock forage.
LESPEDEZA SERICEA (Lespedeza cuneata)			M–L		
scarified	60 lbs.	1.4 lb.	P C		350,000 seed per pound. Widely adopted. Low maintenance. Mix with Weeping lovegrass, Common bermuda, bahia, or tall fescue. Takes 2 to 3 years to become fully established. Excellent on roadbanks. Inoculate seed with EL inoculant
unscarified	75 lbs.	1.7 lb.	M–L P C		Mix with Tall Fescue or winter annuals.
seed–bearing hay	3 tons	138 lb.	M–L P C		Cut when seed is mature, but before it shatters. Add Tall fescue or winter annuals.
LESPEDEZA Ambra virgata (Lespedeza virgata DC) or Appalow (Lespedeza cuneata [Dumont] G. Don)					300,000 seed per pound. Height of growth is 18 to 24 inches. Advantageous in urban areas. Spreading–type growth. New growth has bronze coloration. Mix with weeping lovegrass, common bermuda, bahia, tall fescue or winter annuals. Do not mix with Sericea lespedeza. Slow to develop solid stands. Inoculate seed with EL inoculant.
scarified	60 lbs.	1.4 lb.	M–L P C		
unscarified	75 lbs.	1.7 lb.	M–L P		
LESPEDEZA, SHRUB (Lespedeza bicolor) (Lespedeza thumbergii)			M–L		
plants	3' x 3'		P C		Provide wildlife food and cover.
LOVEGRASS, WEEPING (Eragrostis curvula)					
alone	4 lbs.	0.1 lb.	M–L P		1,500,000 seed per pound. Quick cover. Drought tolerant. Grows well with Sericea lespedeza on roadbanks.
with other perennials	2 lbs.	0.05 lb.	C		
MAIDENCANE (Panicum hemitomon)					For very wet sites. May clog channels. Do spray from local sources. Use along river banks and shorelines.
sprigs	3' x 3' spacing	ALL			
PANICGRASS, ATLANTIC COASTAL (Panicum amarum var. amarulum)	20 lbs.	0.5 lb.	P C		Grows well on coastal sand dunes, borrow areas, and gravel pits. Provides winter cover for wildlife. Mix with Sericea lespedeza except on sand dunes.
REED CANARY GRASS (Phalaris arundinacea)					
alone	50 lbs.	1.1 lb.	M–L		Grows similar to Tall fescue.
with other perennials	30 lbs.	0.7 lb.	P		
SUNFLOWER, "AZTEC" MAXIMILLIAN (Helianthus maximilian)	10 lbs.	0.2 lb.	M–L P C		227,000 seed per pound. Mix with Weeping lovegrass or other low–growing grasses or legumes.

1/ Reduce seeding rates by 50% when drilled
2/ PLS is an abbreviation for Pure Live Seed. Refer to Section V.E. of these specifications.
3/ M–L represents to Mountain; Blue Ridge; and Ridges and Valleys MLRAs
4/ P represents the Southern Piedmont MLRA
5/ C represents the Southern Coastal Plain; Sand Hills; Black Lands; and Atlantic Coast Flatwoods MLRAs

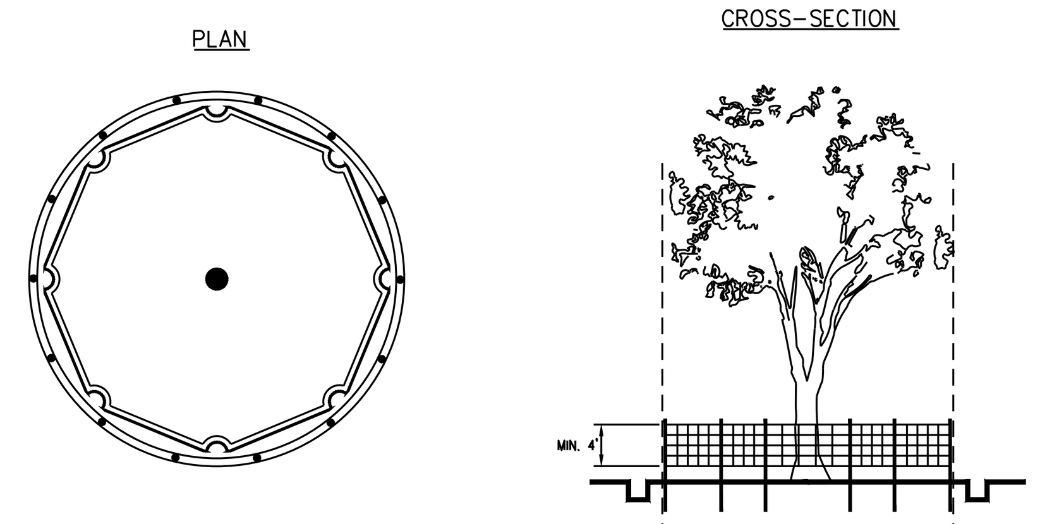
N.T.S.

(Tr) TREE PROTECTION

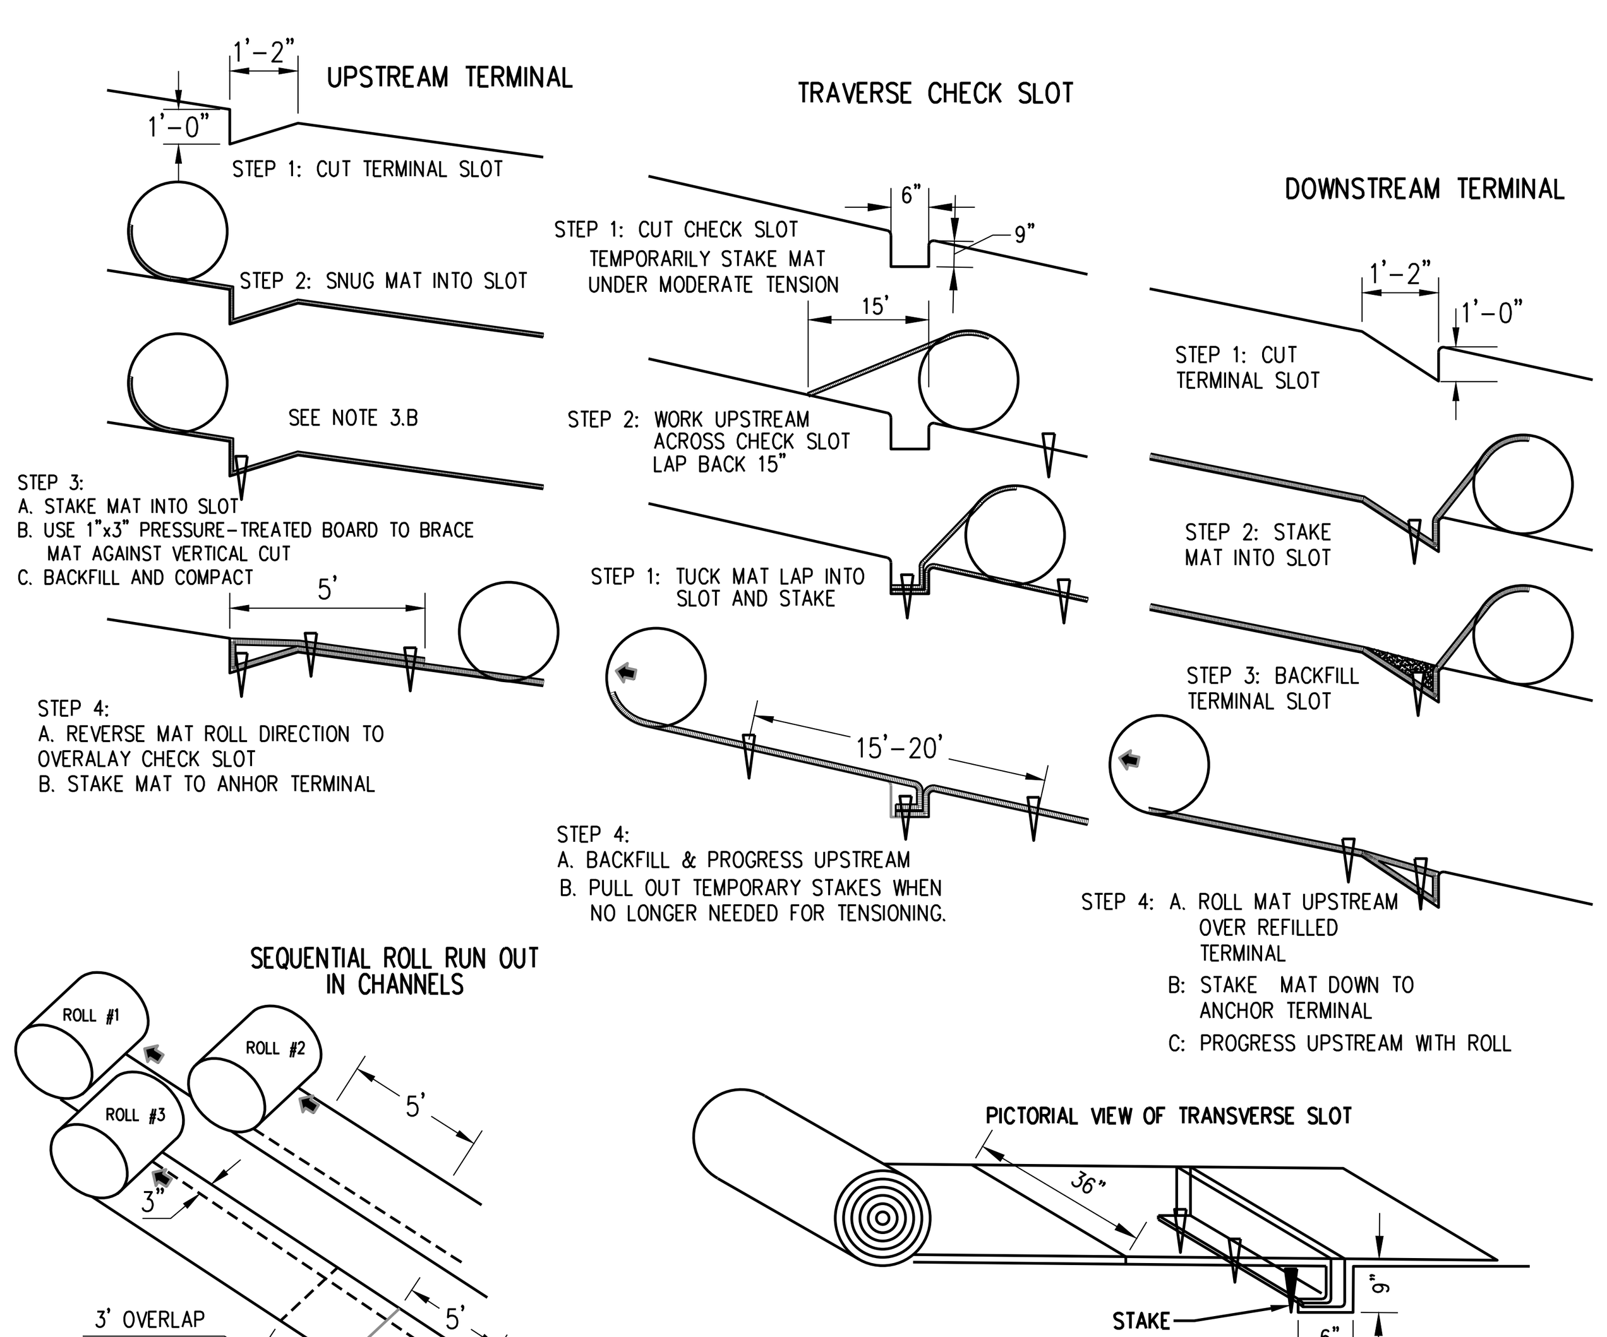
"SNOW" FENCE



NOTES:
1. USE TRENCHER (I.E. DITCH WHICH) TO CUT A 4"-5" W X 18" D TRENCH ALONG DRIP LINE (LIMIT OF CLEARING) AND BACKFILL WITH SAND AND LIGHTLY COMPACT.
2. SPACE STAKES AT INTERVALS SUFFICIENT TO MAINTAIN ALL FENCING OUT OF DRIP LINE OR AS SHOWN BY ENGINEER (SET STAKES NO GREATER THAN 6 FEET ON CENTER-REBAR IS NOT TO BE USED FOR STAKES).
3. MAINTAIN FENCE BY REPAIRING AND/OR REPLACING DAMAGED FENCE. DO NOT REMOVE FENCING PRIOR TO LANDSCAPING OPERATIONS.
4. DO NOT STORE OR STACK MATERIALS, EQUIPMENT, OR VEHICLES WITHIN FENCED AREA.
5. FENCE SHALL BE ORANGE VINYL "SNOW FENCE" 4' HIGH MINIMUM.

(Ss) SLOPE STABILIZATION

NOT TO SCALE



NOTES:
1. START AT DOWNSTREAM TERMINAL AND PROGRESS UPSTREAM.
2. FIRST ROLL IS CENTERED LONGITUDINALLY IN MID CHANNEL AND PINNED WITH TEMPORARY STAKES TO MAINTAIN ALIGNMENT.
3. SUBSEQUENT ROLLS FOLLOW IN STAGGERED SEQUENCE BEHIND FIRST ROLL. USE CENTER ROLL FOR ALIGNMENT TO CHANNEL CENTER.
4. WORK OUTWARDS FROM CHANNEL CENTER TO EDGE.
5. USE 3" OVERLAP AND STAKE AT 5' INTERVAL ALONG SEAMS.
6. USE 3' OVERLAPS AND SHINGLE DOWNSTREAM TO CONNECT LINING AT ROLL ENDS.

Rolled Erosion Control Products
A natural fiber blanket with single or double photodegradable or biodegradable nets.

Materials - RECP
Blankets shall be nontoxic to vegetation, seed, or wildlife. Products shall be determined to be non-toxic in accordance with EPA-821-R-02-012. At minimum, the plastic or biodegradable netting shall be stitched to the fibrous matrix to maximize strength and provide for ease of handling.

RECP's are categorized as follows:

a. Short-Term (functional longevity 12 mo.)
   i. Photodegradable
      Straw blankets with a top and bottom side photodegradable net. The maximum size of the mesh shall be openings of 0.5"x0.5". The blanket should be sewn together on 1.5" centers with degradable thread. Minimum thickness should be 0.35" and minimum density should be 0.5 lbs per square yard.
   ii. Biodegradable
      Straw blanket with a top and bottom side biodegradable jute net. The top side net shall consist of machine direction strands that are twisted together and the interwoven with cross direction strands (leno weave). The bottom net may be leno weave or otherwise to meet requirements. The approximate size of the mesh shall be openings of 0.5"x1.0". The blanket should be sewn together on 1.5" centers with degradable thread. Minimum thickness should be 0.25" and minimum density should be 0.5 lbs per square yard.

b. Extended-Term (functional longevity 24 mo.)
   i. Photodegradable
      Blankets that consist of 70% straw and 30% coconut with a top and bottom side photodegradable net. The top net should have ultraviolet additives to delay breakdown. The maximum size of the mesh shall be opening of 0.65"x0.65". The blanket should be sewn together on 1.5" centers with degradable thread. Minimum thickness should be 0.35" and minimum density should be 0.6 lbs per square yard.
   ii. Biodegradable
      Blankets that consist of 70% straw and 30% coconut with a top and bottom side biodegradable jute net. The top side net shall consist of machine direction strands that are twisted together and then interwoven with cross direction strands (leno weave). The bottom net may be leno weave or otherwise to meet requirements. The approximate size of the mesh shall be openings of 0.5"x1.0". The blanket should be sen together on 1.5" centers with degradable thread. Minimum thickness should be 0.25" and minimum density should be 0.65 lbs per square yard.

c. Long-Term (functional longevity 36 mo.)
   i. Photodegradable
      Blankets that consist of 100% coconut with a top and bottom side photodegradable net. Each net should have ultraviolet additives to delay breakdown. The maximum size of the mesh shall be openings of 0.65"x0.65". The blanket should be sewn together on 1.5" centers with degradable thread. Minimum thickness should be 0.3" and minimum density should be 0.5 lbs per square yard.
   ii. Biodegradable
      Blankets consist of 100% coconut with a top and bottom side biodegradable jute net. The top side net shall consist of machine direction strands that are twisted together and then interwoven with cross direction strands (leno weave). The bottom net may be lento weave or otherwise to meet requirements. The approximate size of the mesh shall be openings of 0.5"x1.0". The blanket should be sewn together on 1.5" centers with degradable thread. Minimum thickness should be 0.25" and minimum density should be 0.5 lbs per square yard.

Hydraulic Erosion Control Products (HECP)
HECP shall utilize straw, cotton, wood or other natural based fibers held together by a soil biding agent which works to stabilize soil particles. Paper mulch should not be used for erosion control.

Materials - HECP
Hydraulic erosion control products shall be prepackaged from the manufacturer. Field mixing of performance enhancing additives will not be allowed. Fibrous components should be all natural or biodegradable. Products shall be determined to be non-toxic in accordance with EPA-821-R-02-012.

CRITERIA
Rolled Erosion Control Products (RECPs) and Hydraulic Erosion Control Products (HECPs):
- Installation and stapling of RECPs and application rates for the HECPs shall conform to manufacturer's guidelines for application
- Short-Term RECPs as a minimum shall be used to stabilize concentrated flow areas with a velocity less than 5ft/sec on slopes 3:1 or greater with a height of 10 feet or greater.

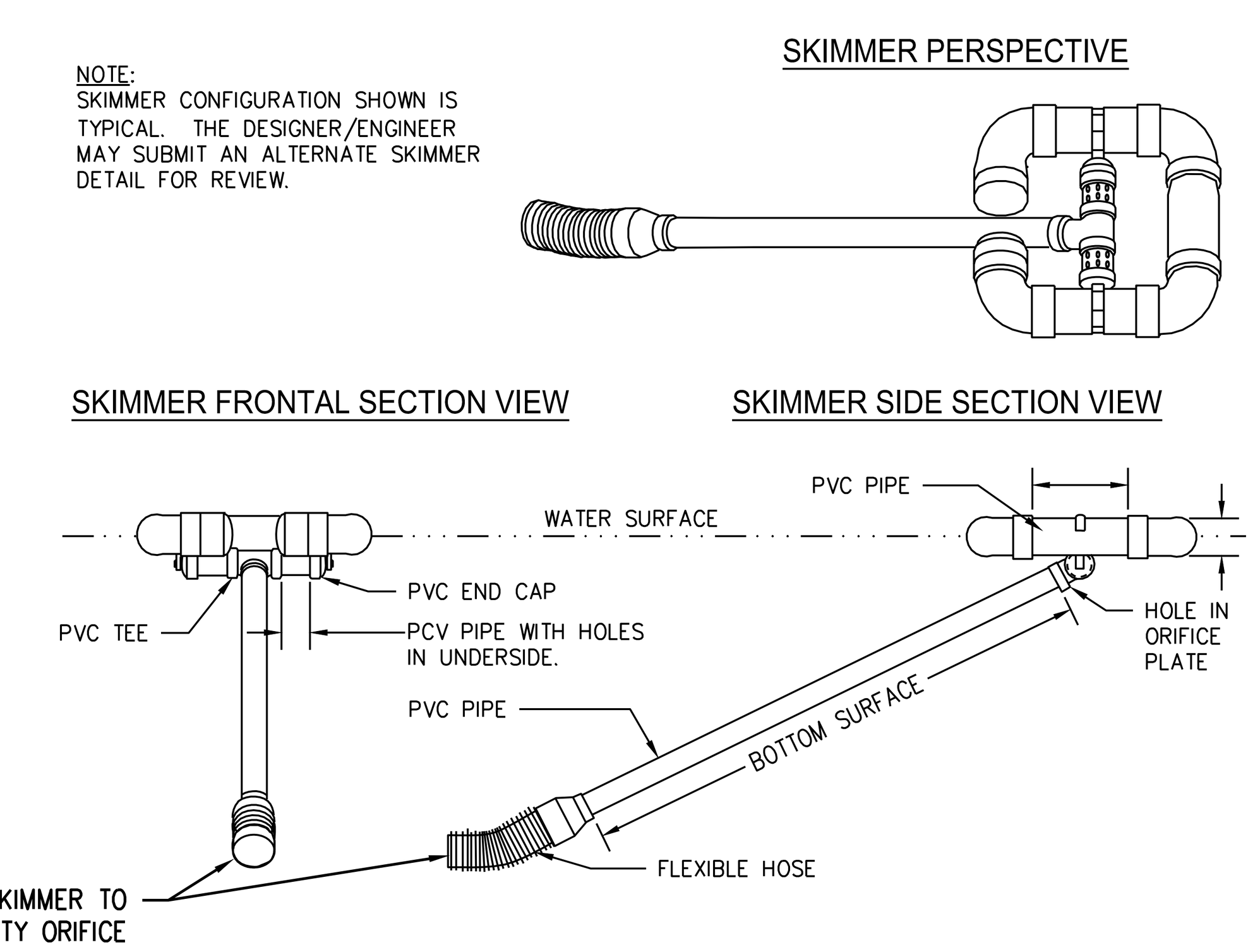
SITE PREPARATION
After the site has been shaped and graded to the approved design, prepare a friable seedbed relatively free from clods and rocks more than one inch in diameter, and any foreign material that will prevent contact of the soil stabilization mat with the soil surface. Surface must be smooth to ensure proper contact of blankets or matting to the soil surface. If necessary, redirect any runoff from the ditch or slope during installation.

MAINTENANCE
All erosion control blankets and matting should be inspected periodically following installation, particularly after rainstorms to check for erosion and undermining. Any dislocation or failure should be repaired immediately. If washouts or breakage occurs, reinstall the material after repairing damage to the slope or ditch. Continue to monitor these areas until they become permanently stabilized.

(Sk) FLOATING SURFACE SKIMMER

NOT TO SCALE

NOTE:
SKIMMER CONFIGURATION SHOWN IS TYPICAL. THE DESIGNER/ENGINEER MAY SUBMIT AN ALTERNATE SKIMMER DETAIL FOR REVIEW.



PRODUCT DESIGNS
ONE END OF A RIGID TUBE IS CONNECTED TO THE BARREL OF THE DISCHARGE SYSTEM VIA A FLEXIBLE COUPLING. THE OTHER END OF THE TUBE FLOATS AT THE WATER SURFACE. THE FLEXIBLE COUPLING ALLOWS THE RIGID TUBE TO ARTICULATE AS THE WATER LEVEL CHANGES. A SCREEN AT THE INLET PREVENTS FLOATING TRASH FROM ENTERING THE TUBE. EACH PRODUCT (AND EACH PRODUCT SIZE) HAS A UNIQUE DESIGN, INCLUDING THE ASSOCIATED HYDRAULICS THAT ARE AFFECTED BY THE FLOATATION, INLET, AND CONNECTING TUBE/COUPLING DESIGNS CHOSEN.

FLOATATION REQUIREMENTS
FLOATING SURFACE SKIMMERS THAT SINK OR COMPLETELY SUSPEND UNDER THE WATER SURFACE ARE NOT ACCEPTABLE. A PORTION OF THE SKIMMER MUST BE VISIBLE ABOVE THE WATER SURFACE AT ALL TIMES. THE LOCATION OF THE FLOATING "HEADWORKS" RELATIVE TO THE WATER SURFACE, AND THE SIZE AND LOCATION OF VENTS AND INLETS, MUST BE THE SAME AS WHEN THE PRODUCT WAS TESTED FOR FLOW RATES. THIS SHOULD BE VERIFIED AND DOCUMENTED AS INHERENT TO THE PRODUCT DESIGN DURING FLOW TESTING.

TRASH GUARD & MAINTENANCE ROPE
ALL FLOATING SURFACE SKIMMER DESIGNS INCLUDE A TRASH GUARD AND MAINTENANCE ROPE IN ORDER TO PREVENT AND REMOVE BLOCKAGE FROM FLOATING DEBRIS. TRASH GUARDS PREVENT LARGER DEBRIS FROM ENTERING THE SKIMMER THAT MAY CAUSE INTERNAL BLOCKAGE. THE MAINTENANCE ROPE IS USED TO REMOVE TRASH AND DEBRIS THAT ACCUMULATES ON THE OUTSIDE OF THE TRASH GUARD. ENSURE THE MAINTENANCE ROPE IS FLOATABLE.

SKIMMER PIT
EXCAVATE A SHALLOW PIT FILLED WITH RIPRAP UNDER THE FLOATING SURFACE SKIMMER TO ACCOUNT FOR SEDIMENT THAT ACCUMULATES ON THE SEDIMENT BASIN BOTTOM AROUND THE SKIMMER. THE PIT ALLOWS THE SKIMMER TO COMPLETELY DRAIN THE BASIN. AT A MINIMUM, THE PIT HAS DIMENSIONS OF 4FT X 4FT WITH A MINIMUM DEPTH OF 2 FT. ENSURE THE BOTTOM OF THE PIT IS LOWER THAN THE INVERT OF THE OUTLET BARREL FROM THE RISER. FLOATING SKIMMERS THAT HAVE A FOOTED DESIGN THAT PREVENTS THE DEVICE FROM LODGING IN ACCUMULATED SEDIMENT DO NOT REQUIRE A SKIMMER PIT.

CONSTRUCTION SPECIFICATIONS

MATERIALS
USE FLOATING SURFACE SKIMMERS MADE OF PVC (SCHEDULE 40 OR GREATER) OR OTHER APPROPRIATE MATERIALS.

Quality Assurance
Each skimmer must have documented identification, including but not limited to the following:

- Manufacturer's name and location.
- Manufacturer's telephone number and fax number.
- Manufacturer's e-mail and web address.
- Skimmer name, model, and/or serial number.
- Skimmer dimensions.
- Certification that the skimmer meets the physical and performance criteria of this specification.

Installation
Install the device according to the manufacturer's instructions.

Additional Information
A shut-off valve to facilitate skimmer main-tenance or emergency regulation of the flow discharge rate, installed at the discharge end of the barrel as it exits the embankment is recom-mended. (Normal skimmer operation is to be based on the "full open" valve setting.) A storm drain outlet protection device shall be installed at the barrel discharge point.

MAINTENANCE
Inspect Floating Skimmers together with the Sediment Basin inspections. Inspect the floating surface skimmer for any structural damage, clogging, or excessive sediment accumulation.

While draining the basin, the trash guard of the skimmer may clog with debris. Typically, a few jerks on the maintenance rope will clear the skimmer of debris and restore flow. If jerking the maintenance rope does not work, pull the skimmer to the embankment with the maintenance rope and manually remove all debris from the trash guard. An internal clog or blockage may require the device to be disassembled and repaired.

If the skimmer becomes stuck in the mud at the bottom of the basin it must be freed to allow for normal operation. This can typically be done by use of the maintenance rope. Remove sediment deposits from the basin when approximately one-third of the storage volume has been lost to sediment accumulation or when the floating skimmer cannot settle low enough to drain the entire basin. Remove or pull the skimmer to a side embankment using the maintenance rope and remove sediment from the skimmer pit.

FLOATING SURFACE SKIMMER (Sk) SIZING INFORMATION

Sk-1
1. POND, TRAP OR BASIN SIZE
   TOP LENGTH x WIDTH = 60'x120'
   BOTTOM LENGTH x WIDTH = 40'x100'
   DEPTH = 5' AVG.
   TOTAL STORAGE PROVIDED = 122,000 CF / 4,519 CY
2. TIME TO DRAIN (hrs) = 72
3. SKIMMER DIMENSIONS (ORIFICE & HEAD SIZE) (inches) = 6" SKIMMER W/ 5.3" DIA. ORIFICE
4. MANUFACTURER NAME = FAIRCLOTH

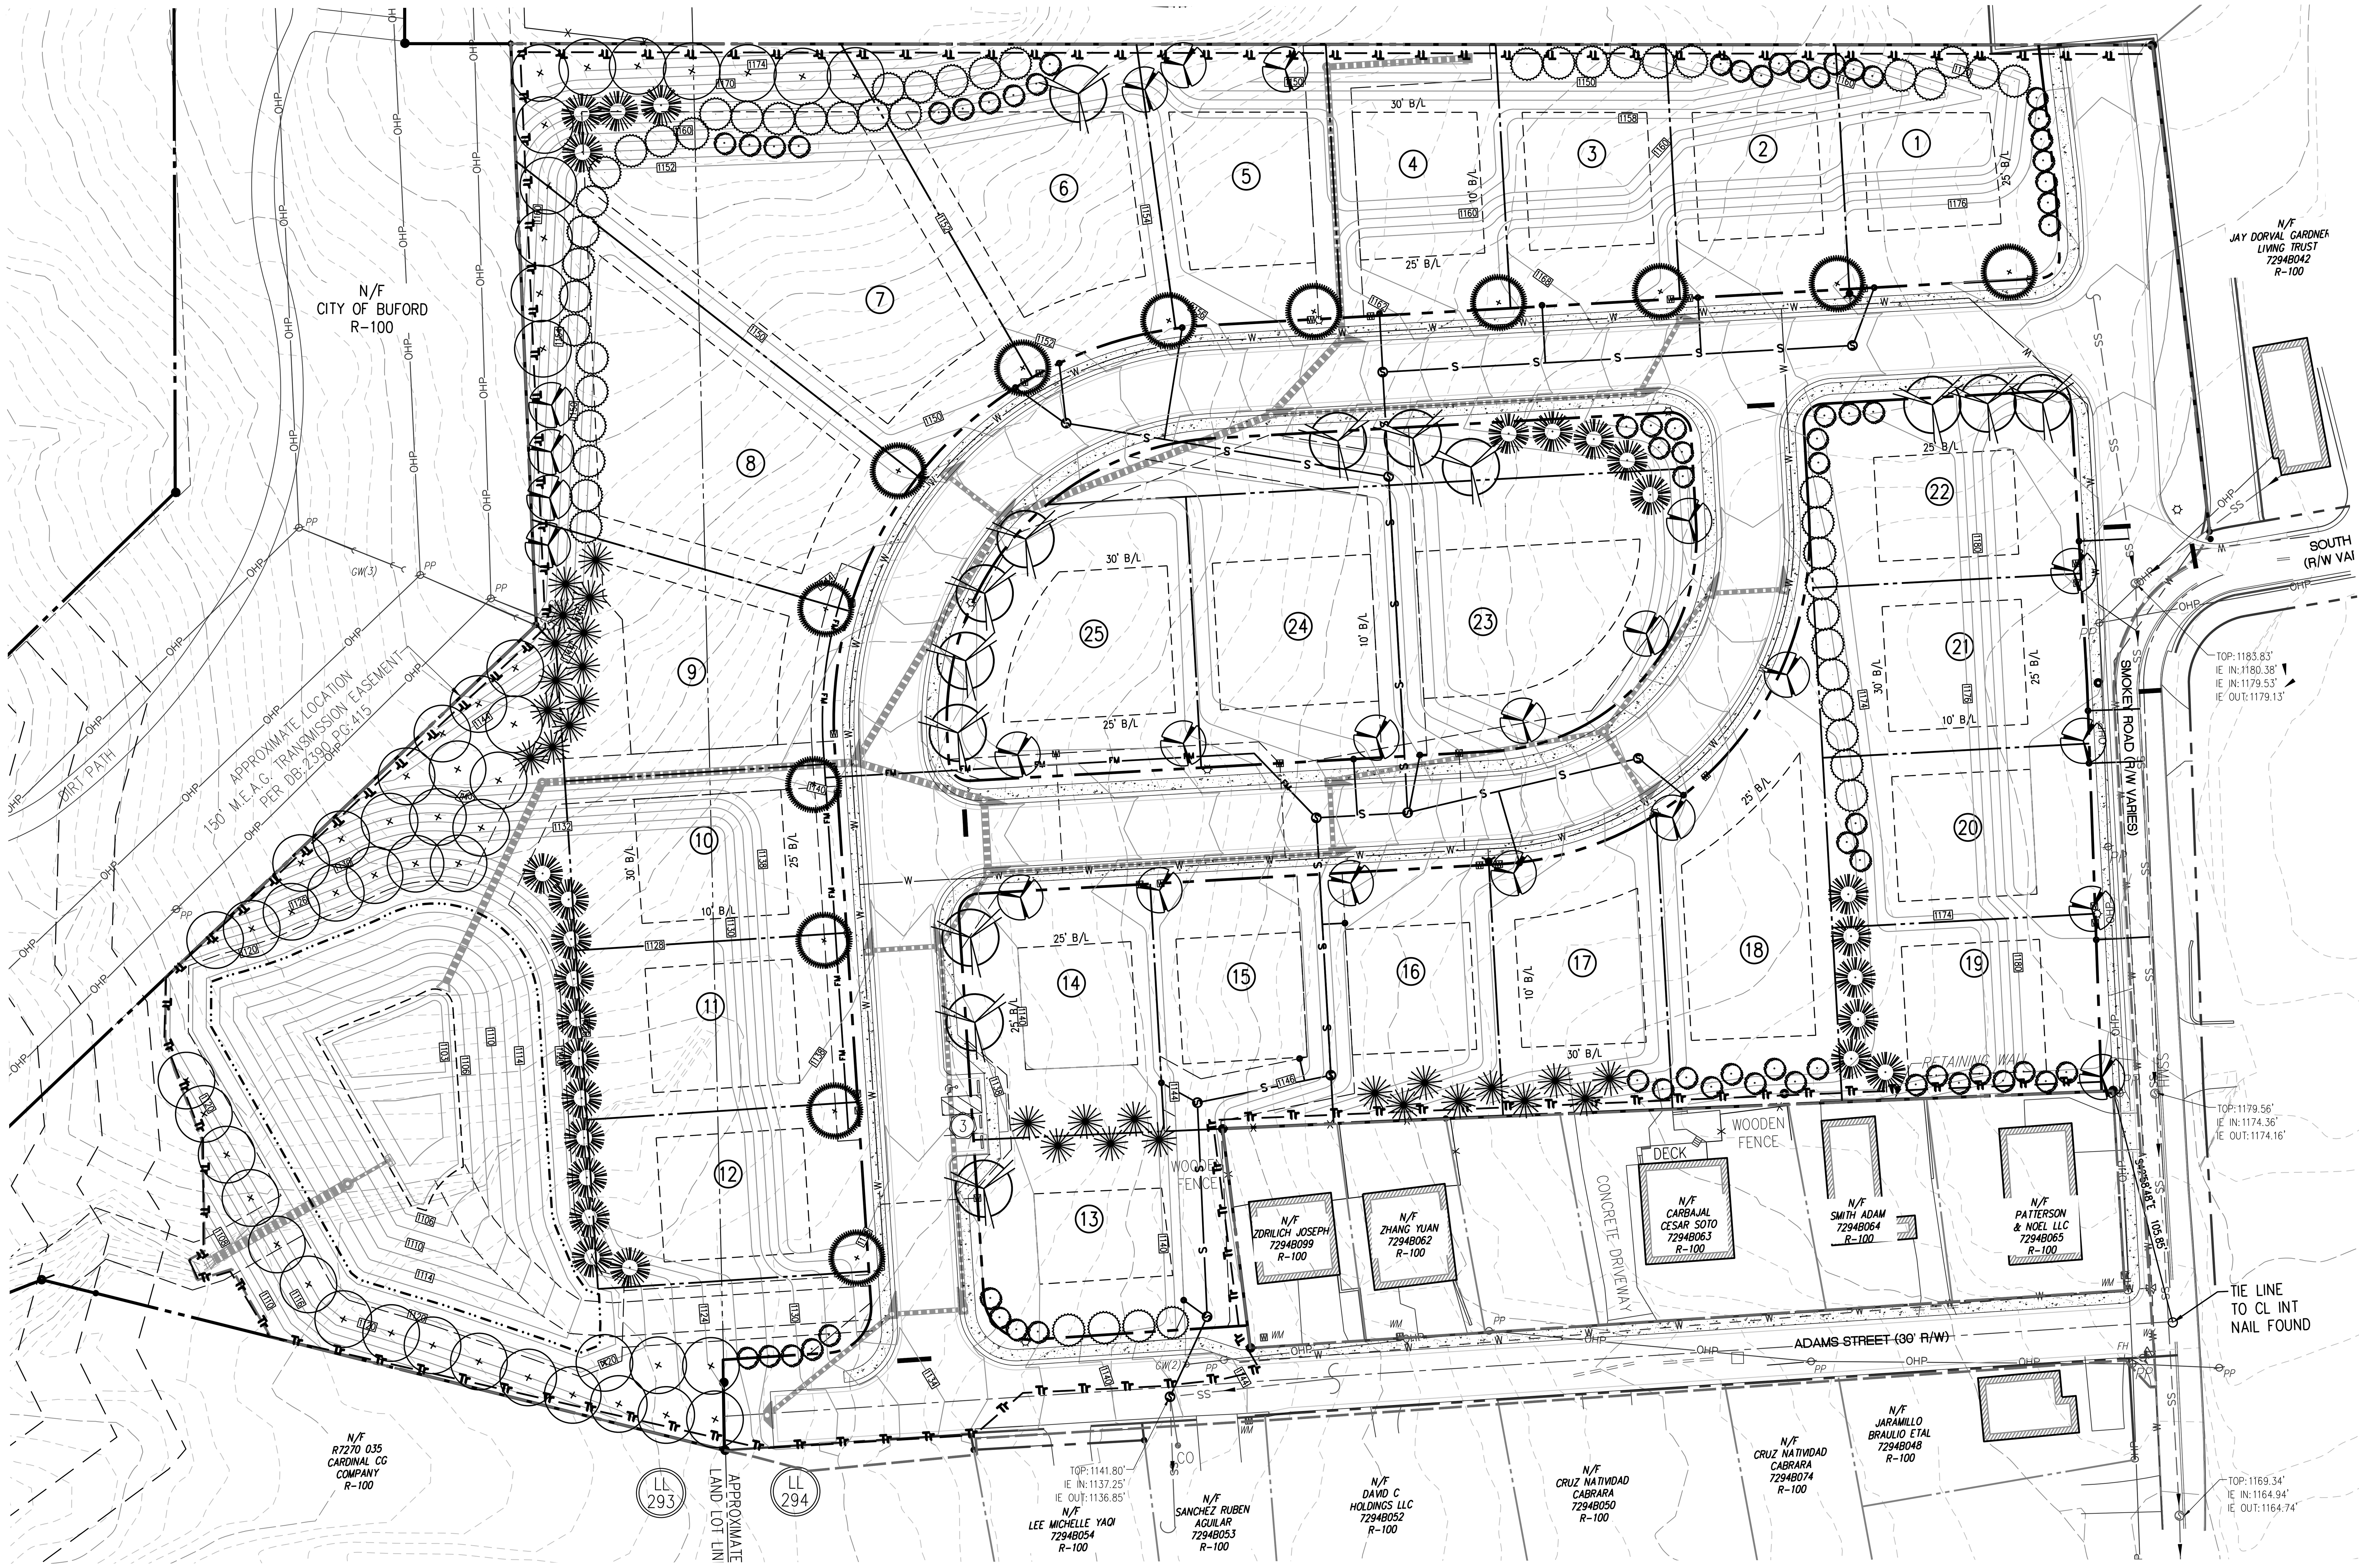
146.8 UNITS PROPOSED/PRESERVED > 146.4 UNITS REQUIRED



CITY OF BUFORD NOTES

1. THE DESIGN PROFESSIONAL HAS PREPARED THESE PLANS IN ACCORDANCE WITH THE CITY OF BUFORD TREE PROTECTION ORDINANCE.
2. ALL TREE FENCING, STAKING OR CONTINUOUS RIBBON AND ALL EROSION CONTROL BARRIERS MUST BE INSTALLED PRIOR TO AND MAINTAINED THROUGHOUT THE LAND DISTURBANCE AND CONSTRUCTION PROCESS, AND SHOULD NOT BE REMOVED UNTIL FINAL LANDSCAPING IS INSTALLED.
3. SOD IN THE FRONT YARD AND RIGHT-OF-WAY OF ALL PROPERTIES IS REQUIRED.
4. UPON FINAL INSTALLATION OF NEW TREES PLANTED UNDER THE REQUIREMENTS OF THE TREE PROTECTION ORDINANCE, AND FOLLOWING ACCEPTANCE BY THE DEVELOPMENT DEPARTMENT, THE OWNER SHALL WARRANT THE NEW TREES AND PROVIDE FOR THE REPLACEMENT OF THOSE WHICH DID NOT SURVIVE FOR A PERIOD OF NO LESS THAN ONE (1) YEAR.

PLANTING NOTES

1. THE LANDSCAPE CONTRACTOR SHALL SUPPLY ALL PLANT MATERIAL IN QUANTITIES SUFFICIENT TO COMPLETE THE PLANTING SHOWN ON ALL DRAWINGS.
2. ALL MATERIAL SHALL CONFORM TO THE GUIDELINES ESTABLISHED BY THE CURRENT AMERICAN STANDARDS FOR NURSERY STOCK, PUBLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN.
3. NO PLANT SHALL BE PUT INTO THE GROUND BEFORE ROUGH GRADING IS COMPLETE.
4. ALL PLANTS SHALL BEAR THE SAME RELATIONSHIP TO FINISHED GRADE AS THE PLANT'S ORIGINAL GRADE BEFORE DIGGING. ROOT COLLARS SHALL BE EXPOSED.
5. ALL PLANTS SHALL BE BALLED AND WRAPPED OR CONTAINER GROWN AS SPECIFIED. NO CONTAINER GROWN STOCK WILL BE ACCEPTED IF IT IS ROOT BOUND. ALL ROOT WRAPPING MATERIAL MADE OF SYNTHETIC OR PLASTICS SHALL BE REMOVED AT THE TIME OF PLANTING.
6. AT PLANTING TIME, ALL PLANTS SHALL BE PRUNED FOR OPTIMUM APPEARANCE AND DESIGN INTENT BY ELIMINATING TALL SHOOTS, DEAD WOOD AND SUCKERS.
7. NO PLANT MATERIAL WILL BE ACCEPTED IF IT IS DAMAGED, DISEASED OR INADEQUATE IN SIZE AS SPECIFIED ON PLANS. GENERAL CONTRACTOR OR OWNER WILL HAVE THE ABILITY TO REFUSE PLANT MATERIAL IF THE ABOVE STANDARDS ARE NOT MET.
8. ALL PLANT MATERIAL SHALL BE INSTALLED AS PER DETAILS.
9. LANDSCAPE CONTRACTOR SHALL PROVIDE FERTILIZER, PRE-EMERGENT, LIME, AND TOPSOIL.
10. LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR CLEAN UP OF ALL CONTAINERS, PALLETS, DEBRIS, ETC. RESULTING FROM HIS WORK.
11. ALL PLANTS SHALL BE WATERED THOROUGHLY TWICE DURING THE FIRST 24-HOUR PERIOD AFTER PLANTING, ALL PLANTS SHALL THEN BE WATERED WEEKLY OR MORE OFTEN AS NECESSARY TO MAINTAIN THE EQUIVALENT OF ONE INCH OF ABSORBED WATER PER WEEK.
12. WARRANTY DOES NOT INCLUDE ACTS OF NATURE OR VANDALISM.
13. NO CERTIFICATE OF OCCUPANCY SHALL BE ISSUED UNTIL ALL REQUIREMENTS OF THE TREE PLANTING HAVE BEEN SATISFACTORILY COMPLETED. PLANT MATERIAL SHALL BE WARRANTIED FOR 12 MONTHS FROM DATE OF CO OF A MAINTENANCE BOND SHALL BE PROVIDED TO CO.
